A characteristic and unique composition in the highly imaginative and allegorical style of the period. It depicts the composer's musical victories. He is represented as standing in a chariot of ancient form, drawn by two gentlemen who may possibly typify defeated rivals. He has his baton in hand and appears to be conducting from a score on a stand before him. Over him is poised an angel in the act of placing a wreath of immortelles on his head. Two of his friends are seated in the rear of the chariot and it is followed by a procession of happy people blowing horns, playing violins, etc. The chariot has just passed through a triumphal arch, and the population at the side of the road is absorbed in wonder and admiration at the unwonted sight. It is to be regretted that no artist's name is attached to this.

No. 60. Rameau. (A profile view of the composer.)

No. 61. Marcellus or Marcello

Born in Venice, 1684, died there, 1750. A distinguished Venetian gentleman, a patron of music and the fine arts, whose home was a social centre for gifted musicians, artists, and scholars. He had musical talent himself and published some compositions for the violin and flute. The illustration apparently represents two sides of a medal — a profile head of the composer on one side and on the reverse a tree with fruit attached and the motto, "Miscentur in Unum."

No. 62. George Frederick Handel

The life of Handel is so familiar that no extended biographical account is necessary. This composer, one of the greatest musical geniuses this world has ever seen, was born in Halle, Germany, 1685, and died in London in 1759. After serving as organist at Halle, he won honors in Berlin as a player of the organ, and lived in Hamburg. Several years (1706-1709) were spent in Italy, in composing dramatic and sacred music. After a year in Germany he settled in London in 1710, where he remained almost continuously till his death. The long story of his plucky efforts to succeed in writing operas is well known. In 1740 he began the composition of the immortal oratorios, which culminated in the *Messiah* in 1759. His popularity and repute continued for many years, though the end of life was saddened by blindness. He was buried in Westminster Abbey. His works include twenty-three oratorios, over forty operas, church music songs. This is a fine old-fashioned print depicting him as a much younger man than the better-known ones. Under the medallion portrait is a figure of the composer cast as a statue, and portraying him in the act of conducting.

No. 63. G. F. Handel

This portrait is from an old English periodical called *The Universal Magazine*. It bears the inscription, published by Harrison & Co., July, 1794. The painting is by T. Hudson. The printed matter is a short biographical notice, describing him, "as the greatest master of music the world has ever known."

No. 64. G. F. Handel

The composer is here shown in three-quarter length picture with a piece of music in his left hand. It is a noble portrait and the grand and massive dignity of the man comes out with telling effect. The painter Hudson and the engraver Bromley have combined in this to give us a worthy presentation of a great personality. This particular engraving was made for Dr. Arnold's edition of Handel's work published on Oct. 22, 1789.

(*Continued from page* 494)

Step by step through the centuries, working in an atmosphere almost wholly monopolized by commercial pursuit, America has advanced art to such a degree that to-day she is the Mecca toward which journey the artists of all nations. Musical enterprises are given financial support here as nowhere else in the universe, while our appreciation of music is bounded only by our geographical limits.

This wide love for the art springs from the singing school, secular or sacred; from the village band, and from the study of those instruments that are nearest the people. There are more pianos, violins, guitars, mandolins, and banjos among the working classes of America than in all the rest of the world, and the presence of these instruments in the homes has given employment to enormous numbers of teachers who have patiently taught the children and inculcated a love for music throughout the various communities.

Right here is the menace in machine-made music! The first rift in the lute has appeared. The cheaper of these instruments of the home are no longer being purchased as formerly, and all because the automatic music devices are usurping their places.

And what is the result? The child becomes indifferent to practice, for when music can be heard in the homes without the labor of study and close application, and without the slow process of acquiring a technique, it will be simply a question of time when the amateur disappears entirely, and with him a host of vocal and instrumental teachers, who will be without field or calling.

Great Britain is experiencing this decline in domestic music and the English press is discussing it seriously in its editorials. A recent writer in the London *Spectator* dwells at considerable length upon the prevailing condition, and points to the novel as a sign of the times. The present-day fashionable writer of society fiction, he declares, does not find it necessary to reenforce his heroine with vocal accomplishment, "as in the good old days." He ascribes the passing of home performance, both vocal and instrumental, to the newborn love of athletics among the maids of Albion, together with the introduction of the phonograph as a mechanical substitute for amateur performances.

He believes that the exclamation of the little boy who rushed into his mother's room with the appeal: "O mamma, come into the drawing-room; there is a man in there playing the piano with his hands," is far less extravagant than many similar excursions into the domain of humorous and human prophecy. He states from observation that music has been steadily declining in Great Britain as a factor in domestic life, and that the introduction of machine-made music into the household is largely helping to assist in the change.

While a craze for athletics may have something to do with the indifference of the amateur performer in Great Britain, I do not believe it is much of a factor in this country. It is quite true that American girls have followed the athletic trend of the nation for a long while; at the same time they have made much headway in music, thanks to studious application. But let the mechanical music-maker be generally introduced into the homes; hour for hour these same girls will listen to the machine's performance, and, sure as can be, lose finally all interest in technical study.

Under such conditions the tide of amateurism cannot but recede, until there will be left only the mechanical device and professional executant. Singing will no longer be a fine accomplishment; vocal exercises, so important a factor in the curriculum of physical culture, will be out of vogue!

Then what of the national throat? Will it not weaken? What of the national chest? Will it not shrink?

When a mother can turn on the phonograph with the same ease that she applies to the electric light, will she croon her baby to slumber with sweet lullabies, or will the infant be put to sleep by machinery?

Children are naturally imitative, and if, in their infancy, they hear only phonographs, will they not sing, if they sing at all, in imitation and finally become simply human phonographs—without soul or expression? Congregational singing will suffer also, which, though crude at times, at least improves the respiration of many a weary sinner and softens the voices of those who live amid tumult and noise.

(*To be continued*)

PLAYING IN TIME

P. S. Gilmore and J. Thomas Baldwin were great friends, and both contributed largely to the success of the Boston Jubilee, in 1872.

Gilmore's band was engaged to play at Worcester on one occasion, and while the band was at the station, Gilmore discovered that the band parts of a march, dedicated to a Worcester dignitary, and to be played there, were missing. Baldwin knew where to get the parts and offered to obtain them.

He procured a carriage, drove rapidly to the house where they were copied, rushed to the station just in time to see the train passing out with the despairing face of Gilmore in the rear car. Nothing daunted, he ran down the track, saw a "pilot engine" just ready to start. "Where are you going?" shouted Baldwin. "Worcester," was the reply. He tumbled in the cab, gave an explanation to the engineer, and Baldwin and the band parts were on their way to Worcester.

At South Framingham, the train with Gilmore stopped for passengers on the track while the pilot engine kept on its way. When Gilmore landed at Worcester, he thought he saw a ghost as Mr. Baldwin stepped up to him and said, "Here are the parts, Mr. Gilmore."

A YOUNG VIOLINIST

A story in the Chicago *Tribune* says that, Napoleon Goflen, a cripple boy, whose chief amusement is playing "by ear" on a rickety little violin, won fast friends when he played for the Major Club not long ago.

The Major Club is an organization of Englewood young women for the furtherance of charity work in that suburb. At the last meeting of the season the club decided to give Napoleon a musical education. Besides that, Napoleon is to have a long outing this summer at the club's expense.

Napoleon can walk now, but he couldn't before he won the friendship of the young women. Their first aid to the little cripple was to buy him a high-heeled shoe and leg brace that made it possible for him to walk. In a quiet way the club has furnished clothes and helped many poor children. Among other things it has furnished a room in the Englewood hospital and fitted up an apartment in the day nursery in 65th St.

AMERICAN SCHOOL CHILDREN

According to the report of the Commissioner of Education for the fiscal year ended June 30, 1903, there were in the United States at that time 22,655,001 children between the ages of five and eighteen, of whom 18,187,918 were enrolled in public or private schools or colleges, or in special institutions of a more or less educational character. Thus, during the period mentioned, more than 22 per cent of our entire people were at school or college, and their education cost for that one year $251,457,625, or $3.15 per capita of population. To-day our educational system is even larger, and the expense of maintaining it is greater still. — *North American Review*

STORY OF MISDIRECTED ENERGY

Frances, a girl of thirteen, was destined by her mother to be a fine musician. While still a little child, she was taught to read the notes and her tiny fingers were placed on the keyboard. Year in and year out the child was obliged to practice, and she acquired a measured amount of skill, but her playing was wooden and spiritless. In despair, her mother said to her: "What do you expect to be when you are grown up?"

The girl sighed. "When I am grown up, mother, if I have a house of my own, the first thing I shall do will be to order the piano chopped up for kindling wood. I want to be a doctor."

As time passed musical studies were dropped, and duly Frances went to the medical college. At last she was allowed liberty to grow in her own proper direction. She is a successful physician, treating nervous disorders with rare sympathy and understanding. — *Woman's Home Companion.*

NOTES OF THE MUSIC WORLD

Hugo Heermann, violinist, and Ernesto Consolo, pianist, will be leading members of the teaching staff at the Chicago Musical College this coming season.

* *

The London Queen's Hall Orchestra symphony concerts for the forthcoming season will take place on November 3 and 17, December 1 and 15, January 19, February 2 and 16, and March 2.

* *

In Milan a large volume of Verdi correspondence will shortly be published.

* *

Subscriptions are being solicited to raise funds for a monument to Richard Wagner in Vienna.

* *

The Thomas Chicago Orchestra is to give a concert at Toronto, Canada, March 12, 1907, in conjunction with the Schubert Choir of that city.

* *

The Munich Conservatory had 346 students last season, and Wurzburg had 280.

* *

The Apollo Club of Chicago will give its concerts this coming season, December 24–27, (repetition) February 11, April 15. Handel's *Messiah*, Elgar's *Dream of Gerontius*, Liszt's *Psalm XIII*, and Bach's *St. Matthew Passion* will be the works presented. Harrison M. Wild will again direct the society.

* *

Camilie Erlanger's opera, *The Polish Jew*, will be produced in Vienna early next autumn.

* *

The Dresden Opera House gave 288 performances last season, Leipsic had 86, and Stuggart 147.

* *

Brussels will hear Strauss' *Salome* next season and Mathieu's *Queen Vashti*.

* *

A valuable gift has been bestowed upon the Museum of Prague by the Bohemian Joseph Sedirva, manufacturer of wind instruments in Odessa. It consists of a collection of sixty-three wind instruments, showing the evolution since the middle of the eighteenth century to our times and includes a new instrument, invented by the donor. To this collection was joined a collection of special applications to make the sound stronger, and the whole was accompanied by a check of 300 crowns to cover eventual expenses.

It was only a short while ago that a public subscription raised 100,000 francs within a few days for a monument to Gounod. After all expenses had been paid, there was 3300 francs left, which the committee and the family decided to distribute among young musicians. The recipients this year, chosen by vote are: Jean-Louis Hûré, Henri Büsser, and Paul-Camille Philipp.

* *

The musical staff of the Paris opera comprises over 400 persons, including 50 soloists, 100 chorus singers, 106 orchestral players, 140 dancers, three orchestral conductors, eight choral conductors, and a large number of supers; and the administrative staff is not less numerous, consisting of, in addition to the director, a general administrator, a general secretary, an under-secretary, a property master, two archivists, two librarians, a chief accountant, a cashier, a general manager, a stage manager, and a vast army of sub-controllers, clerks, engineers, attendants, and other subordinates of all kinds.

In all some 1200 or 1300 persons are on the regular payroll, while, in addition, there are, of course, hundreds more — painters, decorators, copyists, costumiers, and so on — who draw their incomes indirectly from the same source. No wonder that even the huge annual subsidy of $160,000 hardly suffices at times to make both ends meet. The highest possible takings for a single performance are $4600, but this figure is rarely reached. The average receipts per night are about $3250, and as the cost of each performance amounts to about $4000, the necessity of the subvention to keep things going is obvious.

ORGAN DEPARTMENT

THE DECADENCE OF ORGAN BUILDING

H. A. CAPARN

Once upon a time, before the days of Apollo and Orpheus with their lyres, the great god Pan hacked and hewed with the hard, bleak steel at the patient reed as he sat by the river. Somewhere about the same time, or perhaps earlier, one Tubal Cain gained an imperishable reputation as the father of all that handle the harp and organ. Ever since then, up to only a generation or two ago, the organ has been developing as a musical instrument. But nowadays we have changed all that. The organ seems to have reached its apogee as a musical instrument, and to be rising (or falling) into a mechanical instrument.

Let it be understood that the organ referred to is a pipe organ only.

Any one who goes into the organ loft in pursuit of art with a zealous and complaisant organist or organ builder, will be shown, first, the pneumatic or electric attachments, and the combinations and complications of manuals, pedals, and innumerous stops. He will see rows of stop handles or ivory parallelograms fly back and forth into groups, seemingly by their own intelligence, at the touch of a button. Then he will hear all the solo stops one by one, with and without the tremulant, and be told about the ten or twenty inch pressures. Then various combinations of stops will be exploited, odd enough to almost attract the attention of the audience, and make them wonder mildly what is coming next. Then he will hear the full organ with all the couplers, octave and suboctave, not to show how lucidly and impressively four-part counterpoint can be proclaimed, or how every corner of the building can be filled with mellow and majestic sound, but how much noise can be made; how the atmosphere can be rent without being pervaded. But of the Diapasons and the lessening ranks above them for which Bach wrote his fugues, and of the tender and unobtrusive stops by which one can hear such endless coloring given to the repetitions of a psalm tune in an English cathedral, one hears probably nothing. He will be taken behind the scenes to see certain rows of metal tubes or cables, and perhaps be told that by their means the organ can be played two or three hundred feet away. Then come the machinery for filling the bellows, and many explanations concerning water-power and gas-power and horse-powers. Thus he will depart in envy and admiration, and a possible determination to get up a subscription and go one better at his own church. So he has had a feast of Art. He has asked for bread and received a stone. This would not matter much did he not think that he has received the bread.

If such be the professional conception of the organ, what can be the popular conception of organ playing? It is even such as the people have learned to expect, and can most easily learn to like. A strongly marked melody on a solo stop, a bit of showy execution on the choir organ, a march tune or some startling progressions on the great organ, seem to the average audience to fill up most of the measure of solo organ playing. As this kind of performance is not only easiest to listen to, but easiest to execute, it is no wonder that a style and degree of playing should be commonly heard on the organ that would not be tolerated on any other instrument. How many organists have been through a course of special training such as a pianist or violinist must undergo to gain even a hearing before an ordinarily critical audience?

It is an unhappy thing for the survival of the organ as a musical instrument that it has certain attributes that lend themselves to abuse more than any other means of producing ordered sound. It is probably the most difficult of all instruments to play like a master, yet it is the easiest of all to play a little so as to produce pretty effects. It lends itself to imitation more readily than any other, and is in consequence becoming more and more a machine for making poor simulations of every instrument in the orchestra. The last and most fortuitous use of an organ is as an imitative instrument, though this is the first and surest way in which it is abused. Imitations of trumpets, flutes, and clarinets on the organ are sufficiently close to be obvious, but imitations of voices and strings come perilously near the absurd. A conductor would not admit the best of them into his orchestra instead of the real instrument. All these things are fit and valuable in their places, but merely degrade the organ when set in the front rank of its powers. The danger to a proper understanding of organ building and playing probably lies in the effects of such stops as Vox Humanas, Clarinets, and Oboes being looked on as substitutes for the several instruments, instead of merely their analogies. Now the fact is, the organ is not an imitative instrument. It can no more imitate an orchestra or orchestral instrument than an orchestra can imitate an organ. It justifies its existence by being something to itself, apart from, and inimitable by anything else, no less than any other instrument for which musicians have written. The expense and trouble of its construction are repaid, not by a succession of travesties of solo instruments and by the mechanical devices by which they are brought under control, but by the round and mellow tone of its Diapasons, the unity and polyphonious character of the Diapason superstructure, the weight of the pedal tone, the solidity and pervasiveness of the whole, and many other things, of which these, however, are the chief; but these things are becoming of less and less repute, and respect is had to valves and pistons and pressures and ear ticklings. Pure musical tone is no longer regarded, and instead we have raspiness and stridency to startle the dull appetite like musical cayenne pepper. Perhaps the organ, like the violin, has reached perfection, beyond which nothing is possible. Perhaps, like the violins of Cremona, the voicing of flue pipes could no farther go than Father Smith and Renatus Harris; and builders never at rest in search of improvement, have spent the energy of their hands and brains in bettering the machinery of that old-fashioned Father Smith, which really did not amount to much. If they would only have remembered to imitate merely his artistic qualities, like the successors of Stradivarius, we might have music mills that were really noble structures, and would need no more apology than the orchestra of Theodore Thomas. As it is, the organ seems to be degenerating as an instrument of music, while it advances as a machine and a maker of noise; so that its best votaries, hearing it decried as an unemotional engine by those who cannot be affected by its best and quite peculiar powers, cannot for conscience's sake defend it with the uncompromising vigor that the true organ deserves.

There are certain temperaments that are affected by the tone of the organ in a high and quite unique degree. To such the organ would have a musical value that nothing could replace, if there were no solo stops and no electric attachments. When they are reproached by people superior to everything but a *Götterdämmerung* orchestra or the piano technics of an intense foreign gentleman, the strength of whose fingers, like Samson's, lies in his hair, they console themselves by reflecting that Bach, Handel, and Mendelssohn wrote for the organ and loved to play chiefly on it. There is no doubt that they had real musical temperaments, however they may have misapplied them. The temperament that is affected by the organ in an emotional degree is probably rarer than that similarly affected by any other instrument; so the false organ building flourishes, while the true fades for want of appreciation. And it may be, after all, that the organ is essentially a musician's instrument, and caviar to the general; that its true and most valuable voice can only be heard by the elect and learned.

Lest these general remarks should be taken too particularly, it may be well to observe that all organs and their players have not been attacked by such strictures as have been made or implied. If any feel hurt by them, it is hoped that the reminder of principles obvious enough when pointed out, may more than make up to them for a temporary injury to their pride.

When organ building is looked on again not merely as an art, but as a fine art; when the first and best attention of builders who are real musicians is paid to the voicing of the pipes, the general quality and balance of tone, the acoustics of the building and the scale of the whole instrument in relation to it; when the screams of the mixtures are subdued and the sweetness of the soft stops is looked to before the piercing quality of the loud ones; we may hope for the organ a place in musical art unique as the violin, important as the piano. And a new literature for it will appear — when a man shall arise great enough to write it.

CORRESPONDENCE

WILLIAM HORATIO CLARKE

Rambling Extemporization

J. S. — "Many church organists are in the habit of indulging their limited flights of fancy, which they term 'little thoughts of my own,' in their humble way of expressing their time-worn routine of chords, sequences, and cadences in their voluntaries from Sunday to Sunday. They begin their incoherences in one key and ramble into another without any regard to rhythm or form. The chromatic scale forms a ladder to ascend and descend upon with a turn on the middle round, and a bird-like trill on the highest round. The modulations are arrived at through a sequence of sevenths, with plenty of hesitating diminished sevenths, generally taken on a bass of sharp four of whatever key the voluntary or involuntary is being radiated. As a musical auditor, I have been compelled to listen to these vapid soarings until my heart is sore with such senile effusions, when there is such an amount of good and appropriate organ music to be obtained everywhere which would be so acceptable to all. An organist who assumes to inflict such meanderings, instead of giving us the inspirations and educated thoughts of musicians who have written for the noble instrument, is not worthy to hold a modern position where there is any intelligence. I am a pianoforte teacher, and do not desire to officiate as an organist, but know what good organ music consists of, and how it should be played."

Separated Organs

M. C. — "I would like to know what the effect is to the organist who plays an organ which has one half at one end of a church and the other part at the opposite end, one hundred and twenty-five feet distant, with the keyboards that distance from the farther part?"

Comments. — You can work out your own calculations. Sound travels at the rate of eleven hundred feet per second. The tones of the remote part of the organ with electric action would reach the ear of the organist about one tenth of a second later than the pipes nearest the console. In slow music this would not be detrimental to the effect as he would hear it. It would be the same relatively to persons near the remote division. To those located midway in the audience-room, the effect of both sections would be simultaneous, just as it would be to the player if the console should be placed in the centre of the room. The laws of acoustics are inviolable, and there is no mechanism which will cause both divisions of an organ thus located to sound to all persons in the room at the same time, although the tone is produced instantaneously in both divisions of the instrument. An organist who, by means of electric action, plays the instrument at the opposite end of a large hall, does not enjoy his own performance, for the tone is heard by him as much later than his touch on the keys as is required for the sound to reach him.

Coupling the Pedal Section to the Manuals

C. T. L. — "There is one coupler which I have never seen in use but once or twice. It is a coupler for playing the pedal pipes from the manuals. In the first instance, it was applied to a small two-manual organ with direct tracker action, with one Pedal Stop, a 16 ft. Bourdon, simply for the lowest octave. On account of the large pedal valves, it made the touch too heavy for the manual action. In the second instance, a large one-manual organ was built for an Oratorio Society, and the pedal stops were manipulated by an upper manual with pneumatic action, in addition to the regular pedals. It occurs to me that sometimes this would be a very valuable stop in an organ of three manuals, especially in four-hand organ music, in which it is very difficult to execute a good pedal part on account of the position of the two players. I would have this Pedal Coupler attached to the Choir Manual and extend for thirty notes, but have the action so arranged that if a chord should be played within this range, only the lowest note would act upon the pedal pipes. This would give an organist an unusual opportunity of studying very elaborate music which he has not time to perfect singly, by having an advanced pupil play the treble and alto, and he taking the tenor and pedal part, or the right-hand player could take the three upper parts and he the pedal part. Fine registration effects could also thus be produced by two players."

Comments. — This is a good and practical suggestion, and is worthy of consideration.

Memory Taxation in Registration

K. B. C. — "In looking over the specifications of large modern organs, I am impressed with the idea that the multiplicity of accessories adds to the taxation of the memory without producing adequate results. Many of these oblige the organist to retain in mind combinations which have no clear indications, which is detrimental to freedom of musical interpretation. I think that builders and organists are running to extremes in the multiplicity of mechanical intricacies which the rendering of the music does not require. It is certain that listeners who are not organists, and who do not understand stop combinations, are no more impressed by the music which they hear, produced with the use of such complex arrays, than by listening to the direct manipulation of knobs by a versatile organist who is an adept in so skilfully weaving in his tone coloring that his changes are artistically made, and aid in interpreting the music with the proper expression. I have seen large organs with arrays of miniature stop-knob combinations, and in observing many concert organists who are touring in their professional engagements, have noticed that they have no use for them in their programs. They generally use the plain stop-knobs and the loud and soft composition pedals. In regular church work there is no need of anything farther, and church committees should not be led to pay for anything in a new organ which will ever remain dormant."

A NOTABLE MUSIC LIBRARY

"Though as writer, lecturer, and critic Mr. Elson's experience has been many sided," says a writer in the Boston *Globe*, "it is in the tracing of the history of music from its most crude beginnings to its present development that he has found the keenest delight. He has ransacked the bookstands of London, Amsterdam, Strasburg, and Nuremberg, has prowled through out-of-the-way villages of the Black Forest, and has emerged with the collection of parchments and early editions that have helped to put his library in the front rank.

"On the mantelpiece in the music room stands what is believed to be the oldest piece of music in America. It is a parchment missal lettered in old Roman characters, and above the Latin lines appears the Neume notation. The Neume notation went out about 1000 A.D., and black face took the place of Roman script about 800 A.D. As this copy shows evidences of retouching while still in use, its time is fixed as not later than 700 A.D.

"The 'Neume notation' represents the earliest gropings for musical expression. There is no suggestion of a staff and the cabalistic signs are intended merely to jog the memory of one who already knows the tune. Over certain syllables there will be a wave-like line, to represent the rise and fall of the cadence, and over others a series of ascending dots, as though to say, 'Here we go up a little.' It gives no clew, however, to how far up the singer shall go or from what point he should depart before beginning to climb.

"The next development, of which Mr. Elson has several examples, is in the later Neume notation, with the lettering in black face. These are placed between 800 and 1000 A.D., and also show the beginning of illumination of capital letters.

"From this point the idea of the musical staff was introduced. There was a brief transition period, when staffs of one and two lines were used, and then came the five-line staff, with the notes represented by black squares scattered over it, in a way that was intended to be helpful and suggestive.

"Mr. Elson has an example of the two-line staff, which is very rare, for the transition stage was exceedingly brief. The Neume notation still prevailed at the time of this two-line development, but the waves and dots and dashes seemed to feel the steadying influence of even this primitive staff.

"During the time of the square notation on the five-line staff the art of illumination was flourishing. The burnishing of gold leaf after it has been applied to paper or parchment is one of the lost arts, but between 1250 and 1300 it seemed to offer no difficulties to the illuminators of the missals. One example in Mr. Elson's collection of this period has an illuminated capital six inches square of which the background is solid burnished gold. It came from Chester, Eng., and is a fine illustration of the missals of the day.

"The oldest Neume of all represents a prize from the Black Forest. Mr. Elson had bought several things from a little second-hand shop in one of the more remote villages, and was on the point of leaving when the shopkeeper brought out the ancient parchment.

"'This isn't music,' the shopkeeper explained, 'but it is very old and I thought you might like to have it.'

With the coming of the Renaissance the improvement in recording music became rapid, and the sixteenth and seventeenth centuries produced a multitude of works which are well represented by the copies in Mr. Elson's library. These volumes bear the imprint of most of the large cities of Europe from the Netherlands to Venice.

"One of the most treasured objects in Mr. Elson's collection is the album of a singing club organized in Amsterdam in 1560, which met regularly for thirty years. The members of this club were of noble families, and unusual care seems to have been taken in admitting members and visitors. The work is in manuscript, written in a small blank book. The rules of the club are written in Latin and in a beautiful hand, similar to that found in the old missals.

The rules limit the active membership to ten associates, but members are permitted to bring friends to the meetings always, providing that they hold themselves responsible for the proper deportment of their guests. As the object of the members is to enjoy themselves 'in a reputable and moderate manner,' drunkenness is strictly forbidden, and any member who shall 'mislead' another member in this respect shall himself be subject to a fine; as a further prop in the cause of sobriety, stimulants that may be served at the meetings are limited to beer and new wine. Chattering, laughing, telling rude stories, or otherwise interrupting the music also subjected the offender to a fine.

"When a member was admitted to the club he paid an initiation fee of ten shillings, and if he wished to resign he must contribute ten shillings more to the treasury.

"In 1581 there appears a Latin oration which was delivered before the club by a son of one of the members, and was afterward copied into the album in the schoolboy hand of the orator. In the oration he alludes to the war-racked condition of the Netherlands by exclaiming: 'The calamities of the present age might move us more to sighs and tears than to music and playing.' In the names of the guests, too, are those of men who could have been in Amsterdam only as prisoners of war; among them is that of Rogerino de Montmorency.

"At the end of the book are the coats-of-arms of thirteen knights who belonged to the club, the signatures of members and guests, and a page of secret writing which has not been deciphered.

"From Amsterdam also comes another of Mr. Elson's treasures. This is a psalm book bound in tortoise shell and silver. It was made in 1667, some one hundred years after the singing club had flourished.

"Among his English books there is a copy of a ballad, inscribed, '*Rosy Bowers*, set by Henry Purcell during his last illness.' This is interesting from the fact that the great musician of the time of Charles II is said to have died suddenly in a drunken debauch. This ballad, with its explanatory note, published shortly after his death, seems to dispose of that story.

"Among the many other volumes of English works is a copy of the first dictionary of musical terms printed in the English language. It is by an unknown author and was printed in London in 1706. It is entitled *A Short Explanation of such Foreign Words as are made Use of in Musick Books.* The volume is rare because two or three years later it was followed by a much larger book which superseded it in the market.

"The library contains all the early dictionaries of Europe and England.

"But it is in his collection of Americana that Mr. Elson has a bit of music that he considers priceless. It is a copy of the first edition of *Hail, Columbia*, and so far as is known it is the only survival of the edition extant. There are no other copies in the libraries, and no other copy is known to the librarian of Congress. Mr. Elson found it in a book store in London, bound with a number of English songs published at about the same time.

"The course of *The Star Spangled Banner* is also traced through the various settings of words that were sung to the tune until it finally became fixed in its present setting as the national anthem. These earlier settings include the old English drinking song, *To Anachreon in Heaven, Adams and Liberty*, written by Robert Treat Paine for the anniversary of the Massachusetts Charitable Fire Society in 1798, and a version in *Holden's Collection of Masonic Songs*, printed in Dublin in 1802.

"There is also the book in which the hymn *Coronation* first appeared, *Union Harmonies*, printed 'typographically' at Boston in 1793, and, beside many valuable editions of standard works, an interesting collection of music published in the South during the Civil War and entered according to the act of the Confederate Congress.

"It is the fate of most investigators to do their work in the large public libraries, but Mr. Elson lives with his books and makes companions of them. And so it has come about that when he has written 'such and such things are so,' those who are inclined to differ with him think twice, and then again, before they put themselves on record to that effect."

THE FOLK SONGS OF AFRO-AMERICA

L. O'CONNELL

The purely American farmer, laborer, or mechanic does not sing as he goes about his work. The native daughters of America do not give half-uttered musical expression to cheer, or to depression, as they cook, sweep, or run sewing-machines. As a nation Americans lack those outgrowths of race emotion permeated with the vitality of the experience that has evolved them, known as "People's Songs."

The only exception to this deficiency in our musical history is the songs of the negro; "spirituals" as slaves called them in the days "befo' de Wah." African negro chants are in the major key rather than in the minor, beloved by the Asiatic. In the land of his origin the black man delights in song, using a long drawling recitative which ends oftenest in "O! ha!"

This strain is reproduced in the American negro's "spiritual" which rises at times into a peculiar note or cry of anguish, created in the male singer by a nasal elevation of voice as he utters an odd "rasp" through his nostril, and in the female by a high-pitched tone, more like steel scratching a slate than a production from any human throat.

In all negro melody there is an exquisite mournfulness, an agonizing pathos, that can be the gift of no race which does not boast the wonderful cavern in the back of the mouth, and at the base of the nose, that is unique in the African.

In an African village primitive tunes exist for all occasions, from an elephant hunt to a wife beating. Especially in time of mourning does the voice (male and female) become a protracted groan, rising finally into the highest falsetto key, broken at intervals by a chorus from bystanders. All original African songs are best adapted to the baritone voice. There is no attempt at harmony in a chorus; natives all sing in unison.

While the elementary musical form brought from African jungles underlies many American negro songs, in this country the compass of the scale has been enlarged: intervals are bolder; and the primitive black's emotional expression, resting on three or four tones, is more varied. As the colored race has developed (transplanted to a civilized environment) the essentially melodic elements in their music, brought from varied sources and molded in the intelligence of a people uneducated but intensely receptive, reappear in original forms, and are performed with inborn fantastic art.

One slave song of distinctly African origin is:—

"My army, cross over:
Oh, Pharaoh's army drownded!
We'll cross de danger water,
We'll cross de mighty Myo.
My army cross over!"

In the Cameroon dialect "Myo" or "Mawa" signifies "River of Death."

For the songs of the field hands on plantations, the simple recitative or shout, as intoned in Africa, was always the basis.

To the oppressed, debased, human chattels, there was nothing but patience in this life, nothing but eternal freedom in the next. In their religious songs the product of their own musical invention, there is forever realization that, no matter what care, even kindness, came to them from their masters, they were but "merchandise," to be bought and sold at the necessity or whim of their owners. The characteristics of "spirituals," long improvisations of few words with little rhyme and less sense, are mostly the passionate expression of longing for deliverance from cruel bondage.

"Mighty good spirituals," says an aged negro, "are start jes' out o' curiosity. I ben a-raise a-sing myself onct when we boys went for tote some rice, an' de nigger driver, he keep a-callin' on un; an' I say:—

'O, de ole nigger driver!'

"Den anudder boy chip in:—

" 'Fust ting my mammy tole me was, notin' so bad as a nigger driver!' Den I made a sing, jest puttin' a word an' den anudder word!"

"The Driver" is the old-time slave song oftenest heard to-day in the Cotton States of the Far South.

"O, de ole nigger driver!
O, gwine away!
Fust ting my mammy tell me,
O, gwine away!
Nigger driver, second debbil,
O, gwine away!
Best ting for do he driver,
Knock he down an' spoil he labor;
O, gwine away!"

Brisk melodies were chanted in harvest fields, and at corn shuckings, before the days of steam reapers and mowing machines, rhythm being more important than words. A favorite working song, fifteen or twenty dusky "cradlers" swinging brawny arms in unison to the measure, was: —

"Rise up in due time, due time, due time;
Rise up in due time! Ba-a!
Bleat like de ole ewe! Ba-a!
Bleat like de ole ewe! Ba-a-a — a!"

A wide green rolling plain, on a wooded knoll, a white mansion in a garden ablaze with bloom. Stretching to the horizon, fields with mouse-colored fences, negroes and mules turning fresh black furrows. A wagon laden with cotton crawling down the lane to the big mill; in the distance, little cabins, white, pink, blue, yellow. This was the typical plantation of ante-bellum times.

As the field hand at sundown drove the lumbering ox-cart homeward, sitting listlessly upon the heavy "tongue" behind the patient brutes, the melancholy that tinges the negro soul was sung into: —

"Oh Susannah! Fare you well!
An' ain't you mighty sorry?
To think I married you jes' last night,
An' gwine away in de mawnin'!
Oh, Susannah! Fare you well!"

But once in his cabin, cheered with flap-jacks and fried pork, the negro cast off all care, and gave himself to jollity. At night, dusky figures circled rhythmically around a glimmering fire in front of the line of negro quarters, chanting a "shout," tones barbaric, but time always perfectly marked by clapping hands and stamping feet. The song consisted of a chorus, with which other songs were whimsically combined, each performer being named in turn.

"Hold your light, Brudder Robert,
Hold your light on Canaan's shore!
What make ole Satan follow me so?
Satan ain't got notin' to do wid me!
Hold your light on Canaan's shore!"

Half an hour of this shouting, stamping, and clapping would set every man, woman, and child in the negro quarters shuffling, ejaculating, and wriggling, as if bewitched.

The negro's memory for combined words and tunes is prodigious, but often he cannot give one without the other.

"Can sing de hymn right off to yo', boss, but fin' it mighty hard to say de wuds widout de tune."

In our early national existence, the poor ignorant bondsmen, undeveloped at other points, in musical feeling rivaled their white masters and were gifted with melodic strains such as Nature denied to their superiors. Music penetrates the toils, loves, and above all, the religion, of the colored race.

A style of hymn whose music and words originated with the plantation field hands, was a short metre description of Bible incidents, "figurated," as it was called in the negro vernacular, without regard to dates or personages.

"In de days ob de deep tribulashun,
On a big desert island, de Philistines put John!
But de ravens, dey feed him till de dawn come roun';
Den he gib a big jump an' flew up from de groun'!
O, come down! Come down, John!"

A preacher in an Afro-Methodist church intones the greater part of his sermon, the congregation often accompanying his discourse with a low-murmured melody. Prayers are offered to the accompaniment of a monotone of female voices. Every interval is filled with hymns, most of them common metre; the tonality generally major, but sometimes wavering between major and minor. Many hymns are full of the lurid imagery of the Apocalypse, which with the bloody wars of the books of Moses, and the description of the Passion of Christ, appeal to the negro's highly emotional nature. He loves to sing of: —

"De lightnin' an' de flashin' —
Jesus, set poor sinners free!
I can't stan' de fire!
De green tree a-flamin'!
Way down in de valley!
Who will rise an' go wid me?"

Another favorite is: —

"O, who all dem come dress' in white?
De Resurrection drawin' nigh!
Mus' be chillen de Israelites!
De Resurrection drawin' nigh!
Oh, what you say, John?
Oh, what you say?

"Oh, who all dem come dress' in black?
Mus' be all de mohners a-turnin' back!
An' de Resurrection drawin' nigh!
De Debbil is a liar, an' a congiour too!
You don't look out, he congiour you!
Oh, what you say, John?
I heard a voice in de promise land,
Make me tink my time at hand!
De Resurrection drawin' nigh!"

For many years, steamboats on the rivers of the South and West were manned by crews of from forty to fifty slaves, deck-hands, roustabouts, and firemen. These soon developed their own peculiar songs.

When a steamboat left, or entered port, the leader of the roustabouts would mount the capstan and affect to sing the solo part from a scrap of newspaper, the "full strength" of the company joining in the chorus, a prolonged howl being the chief attraction of the performance.

"What boat is dat, my darlin' honey?
Oho, Oho, ho, ah! Yah! Ya-ah-ah!
She de Ribber Ruleh! Yes, my honey!
Ah a-a-a-a yah! A-a-h!"

Some American negro songs were adapted from Irish and Scotch ballads, and dance music heard by house servants in plantation mansions. Others are echoes of French romanzas assimilated in metropolitan homes in New Orleans.

Way down South in Dixie, for instance, closely resembles the old Scotch ballad *O, We'll gang nae mair A-roamin'* and *Ellen Boyne* is the original form of *John Brown's Body.*

Some of our most stirring war lyrics were captured in the Mississippi Valley, and brought north; wild melodies, difficult to catch, but that, once heard, haunt the ear persistently.

Passing years brought not only war, but Negro Emancipation, and the bondsman of the South became the freedman of the United States. Never since man first loved, and suffered, has his infinite longing for peace been uttered more plaintively than in: —

"I know moon-rise; I know star-rise!
Lay dis body down.
I'll lie in de grave, an' stretch out my arms!
Lay dis body down!"

When the cannon at Fort Sumter shattered the fetters of the slave, his musical instinct instantly responded to the transition from humiliation to hope.

At the outbreak of the struggle, many Charleston, S. C., blacks were jailed for persistent singing of: —

"We'll soon be free,
When de Lord will call us home!
My brudder, how long 'fore we done sufferin' here?
When Jesus sets me free,
We'll fight for Liberty!
When de Lord will call us home!"

A song actually originated by the Civil War was sung secretly by negroes all through the war.

"No mo' peck o' corn foh me!
No mo'. No mo'!
Many tousand go!
No mo' driver's lash foh me!
No mo' pint o' salt foh me.
Many tousan' go!"

The peck of corn and pint of salt were slaves' rations.

After nights of perilous, comfortless, picket-duty, soldiers of the negro volunteer regiments would march back to camp, even through a pelting storm, rubber blankets wrapped about their treasured muskets, rain streaming off their dark faces, strong lungs pealing out melodiously: —

"In de mornin',
In de mornin',
Chillen? Yes, my Lord!
Don't yo' hear de trumpet soun'?
If I had a-died when I was young,
I nebber would had de race foh run!
Don't yo' hear de trumpet soun'?"

Another popular marching song was:—

"Oh, what you reckon de Debbil say?
Keep inchin' along! Keep inchin' along!
De Lord's asleep an' your God's gone away!
Keep inchin' along! Keep inchin' along!
Stand right still an' study yohself!
God's gwine move dis Ark hisself.
Keep inchin' along! Keep inchin' along!"

It is curious that the American white race, for generations non-creative of original melodic form, should, in later years, appropriate the tonal characteristics of their former bondsmen.

As early as the fifties, Christy's minstrels, the first face-blackened singers, had a hall of their own in New York, to which the "best people" went to listen to ballads, and choruses, and to enjoy a good laugh at the whimsicalities of *Sambo* and *Bones*. *Stop dat Knockin'*, *Nellie Bly*, *Lily Dale*, and *Ole Dan Tucker* delighted New York audiences, and were soon whistled, hummed, and played all over the United States. The minstrels revelled in a wealth of "fiorature," a richness of coloring, and an intense emotionalism, quite different from the thin ragtime coon-songs of the present day.

But although Christy, Bryant, and Newcomb have been accepted by the world, as interpreters of the musical feeling of the negro, minstrel impersonations have always been purely conventional. No words of songs actually originated by negroes ever strained after vowel endings, such as Sewanee, Tennessee, etc. Nor is triple time used in true negro music.

The minstrel songs which came nearest to actual plantation melodies were the compositions of Stephen Collins Foster, a Pittsburgh man of Irish extraction who, about 1846, composed the words and music of *Louisiana Belle* for a party of young men who used to meet to practice singing and who were tired of ballads then popular.

Foster published in rapid succession *My Old Kentucky Home*, *Old Dog Tray*, *Massa's In De Cold Ground*, *Gentle Annie*, *Willie, We have missed You*, *Old Black Joe*, and *Ellen Boyne.* He added to these more than one hundred and fifty other songs, which have never quite lost the vogue they enjoyed in the mid-nineteenth century.

These ballads are simple in melodic and harmonic treatment. As to the latter, they rest upon tonics, dominant and sub-dominant. They are all genuinely sweet and pure, touching the heart and clinging to the memory. Foster still holds first rank as the American people's composer.

MEMORY — MUSICIANSHIP

A. D. JEWETT

"The defect of most methods which have been devised and employed for improving the memory lies in the fact, that while they serve to impress particular subjects on the mind, they do not render the memory, as a whole, ready or retentive."—Dr. M. Granville.

This statement comes as a profound conviction to the writer, because it is borne out by experience, both in teaching and practice. Memory is a mental faculty, and like every other faculty is developed only by use; it matters less what *modus operandi* is employed than that there be regular and persistent activity of this faculty. I know of several instances where useless lumber of facts and processes have stultified a natural aptitude to memorize.

While there is only one rule in memorizing, that is, — memorize,— there are several points that will be found of great assistance; first, clearness of first impression, depending largely upon attention and willingness to receive; second, resistance to the temptation to blur impressions by attempting to take more at a time than can be easily retained; third, persistence in the repetition of impressions until they stick; and last, but not least, the conviction that, in common with all, you have this faculty capable of perfect development.

To the music student musicianship is of great assistance in the cultivation of memory, as well as in the acquirement of skill in sight reading and technique. But no one of the points of musicianship is necessary in the cultivation of memory, neither should the student depend upon any one. To be convinced of this one has simply to contemplate the good musician whose memory is deficient. Then there are those who lack musicianship, but who memorize at once.

It stands to reason that the playing of the one who memorizes without having musicianship is inartistic and incorrect, not because memory has not faithfully performed its part, but because the lack of musicianship has made first impressions indistinct. I mean by musicianship, all

that goes to make up a knowledge of music in general, as well as of a specific branch of study. If it be piano playing, a few of the points are: the ability to know what you hear; to know both the scale and chord relation of tones, and the relationship of chords — to be able to know when you hear a melody just what tones are used, and their succession. For instance, one may know *My Country, 'tis of Thee*, but they should know also the scale relationship of the tones Do, Do, Re, Ti, Do, Re, Mi, Mi, Fa, Mi, Re, Do, Re, Do, Ti, Do, etc. This is called ear training.

To know the fundamental chord structure throughout the composition, to know thoroughly all points of rhythm; a knowledge of musical notation, sight reading; knowledge of musical form, of musical history, epochs, times, composers; what condition of country, manners, and thought has brought forth the best music; acquaintance with the best musical literature; complete knowledge of the demands of the particular instrument you use for expressing your musical thought,— these are of the greatest assistance in memorizing. To a great degree they are necessary, if the ability to memorize is to be of practical value. They are indispensable if artistic playing is desired. Study points of musicianship to be a musician, develop the memory faculty that you may memorize, and it may be guaranteed that every point of musicianship acquired will be of use in memorizing.

In public performance one other feature is prominent—self-consciousness—and the more complete conscious knowledge of the whole subject you have, the more easily will you overcome this difficulty; of course the most desirable condition is to be so thoroughly *en rapport* with the composition and what it says, that you forget your audience, but the writer has seen too many tragedies with much wailing and gnashing of teeth to advise students to depend on the belief that they can appear in public in this ideal condition, surely not while public performance means so much "show-off," as it does at present.

Again I say, study every point of musicianship that you may be a musician; memorize daily, persistently, easily, no matter how, but memorize. Do not, however, confuse the two, and then will they be the more perfectly blended in the artist.

EXPRESSION

The nice act of expression is art itself; the power of expression is genius: crude genius expresses; trained genius expresses artistically. Literature, more than any art, is allied with life. No wise man disputes it; but what troubles the observer is that the young are not taught to know and appreciate the significant fact. Every musician, sculptor, painter, should be a life-long student of the world's masterpieces, if for no other reason than that each shall be a truer and better worker in his specialty. "I would read more if I had time," such is a common phrase often on the lips of art-workers. Take time to read — that is the only way to read: the power to do lies in the will alone. A man who is deeply read, with regard to his fellows, stands aloof, above their petty jostling: they in the valley, he on the mountain top; they lost in the shadows, he robed in the glorious light.—THALEON BLAKE.

PUBLIC SCHOOL MUSIC

THE SUPERVISOR OF MUSIC

H. W. JONES

This is a strenuous age. It is an age in which there is demanded of the professional man not only that he be a specialist in one thing, but also that he have, as a foundation, a good knowledge of many things. The lawyer who hopes to succeed in some chosen line of his profession must have not only a thorough knowledge of law, but, in addition, a knowledge of business related thereto, to the end that he may be able to adapt himself to such conditions as exist. The physician concerned with a single organ of the human body must have, besides, a thorough knowledge of anatomy and *materia medica*, and a fund of information on matters correlated therewith.

If the day of the "Jack-of-all-trades" is passed, it is no less true that the day of the widely informed specialist is here. As it has been said, "No man liveth to himself alone," so may it be said that no line of truth liveth to itself alone, but is related to every other, either directly or remotely. Music is no exception in this general statement, and the music supervisor who does not recognize this will in time find himself out of adjustment with his surroundings.

In far too many of our city school systems is music a thorn in the flesh of the grade teachers; and not infrequently does it puncture that of the principals and the superintendent. Granted that much fault lies in the direction of the incompetent teacher, it is none the less true that the supervisor is often not exempt.

Be it remembered that the grade teacher is concerned with six or eight other studies, the teaching of which the public insists is even more important than the teaching of music. For the quantity and quality of her teaching she is answerable to the principal, the superintendent, and her patrons. Comes now a supervisor of music who desires to make a record. With little or no practical experience in the schoolroom, with intense zeal for success in his specialty, he prepares a course of study entirely beyond the capacity of teacher and pupils in the matter both of intellect and time. Comes also the supervisor of drawing with a task of similar magnitude; likewise the special teacher of writing, and the specialist in history, and the enthusiast in physical culture, and the advocate of manual training; and the end is not yet. With each one urging her on to greater endeavor, is it a matter of wonder that the poor teacher views with nervous apprehension the visits of the respective specialists?

Of course the visits reveal imperfections and discrepancies fearful to contemplate; of course the teacher desires to be shown how she can cover the course with credit; of course she does not get the method she wants, and the method she gets often comes from a theorist rather than a practical teacher. The specialist becomes exasperated, the teacher has nervous prostration, the school authorities are disgusted, and the pupils have the experience.

Exit music from the course of study!

Every supervisor and special teacher of public school music must recognize certain facts as fundamental to success: —

1. A definite conception of the scope of the public school system is imperative.

2. In these days of overburdened courses of study, economy of time is most important. Music is one, but not the only one, of the studies to be pursued. The ability successfully to correlate it with other studies to the enrichment of the entire course is the test a supervisor will meet at the hands of alert school authorities who, in turn, must pass upon whether the course shall contain a little about many subjects or more thoroughness in a few.

3. An even, well-balanced temperament is indispensable. The supervisor must be a judge of human nature, that he may know how to deal with people of varying and various dispositions. Teacher and pupils should find in him a friend and adviser, quick to note conditions, too great burdens here, possibilities there, ever about him an air of encouragement and good cheer.

4. Since the public has come, perhaps unjustly, to regard a musician as something of an eccentric, he must prove himself a man among men, a citizen among citizens, rather than a bundle of pyrotechnic possibilities in a more or less constant state of explosion. While eccentricity may be the price of genius, the price should not be allowed to become excessive.

5. When the alternative of self or service presents itself, as it often will, the wise one will not hesitate in his choice. A personal boom is not a safe incentive to duty.

6. Hobby-horses are troublesome and unprofitable nags in music. Head and heart and soul consecrated to the intelligent and conscientious performance of a task wherein there are but few "short cuts," will leave an eternal impress upon the character of youth, and prove a benediction to many a weary worker in the business of making life worth living.

The musical features of the week of August 20 to 24, at Chautauqua Institution, Chautauqua, New York, consisted of three concerts: on Monday evening a performance in which the Male Glee Club and Mandolin Club took the principal part; on Wednesday afternoon the usual popular concert; and on Friday evening *Auld Lang Syne*.

* *

We have received an attractive magazine, *The Violin*, of which E. R. Parkhurst is editor. This magazine is issued monthly at Toronto, Can. It is of octavo form, twenty-four pages to the issue, and its contents is interesting and varied.

THE LESSON CLUB

Conducted by DR. PERCY GOETSCHIUS

A series of How to Do articles, distinctly practical, inspiring, and suggestive. These lessons will continue to appear; the best authorities will contribute them. Any suggestion from readers of THE MUSICIAN which will be of aid to one or to many readers will win our immediate consideration.

"—Aye, this brain of ours is a master-worker, whose appliances we do not one half know; and this heart of ours is a rare storehouse, furnishing the brain with new material every hour of our lives; and their limits we shall not know until they shall end — together." — IK MARVEL, *Dream Life*

LESSONS IN MODULATION

PERCY GOETSCHIUS, MUS. DOC.

The student will recall that the preceding lesson was limited to the modulation from a major key to another major key a perfect fifth above, — the so-called "dominant" modulation. This, though probably not the easiest change of key, is one of the most important, and usually the first one to be made in a larger musical sentence; because the natural inclination at, or near, the beginning of a composition, is to pass upward into the dominant key, that is, upward a perfect fifth (from key-note to key-note).

This dominant modulation is applied in precisely the same manner to a *minor* key, and involves exactly the same chords, only excepting the difference in mode; from major, as was seen, it effects the transition into a major key, while from minor it leads to a minor one; for example, from C major to G major, or from C minor to G minor. The relation of signature to signature remains always the same in dominant modulations, namely: if a sharp key, one sharp is added, and if a flat key, one flat is subtracted. The dominant modulation from two sharps (for instance), whether major or minor, passes up into three sharps: either from D major to A major, or from B minor to F♯ minor, or from two flats up to one flat; either from B♭ major to F major, or from G minor to D minor.

This *comparison of the signatures* is of the utmost consequence, especially for the beginner, and must be borne constantly in mind.

One illustration of the dominant modulation from minor will suffice; for example, from F minor to C minor (four flats up to three):—

Ex. 11.

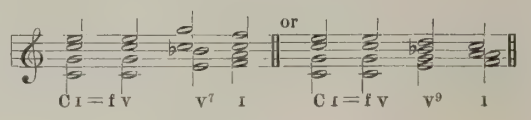
It is made in the usual way, — closing the first key upon its tonic chord, and entering the desired key through one of its dominant chords. This confirms our fundamental rule.

The next in importance and frequency is the so-called "subdominant" modulation. This is the counterpart of the dominant, and consists in passing to the key-note which lies a perfect fifth *below*, — the mode remaining the same; for example, from C major to F major; or from C minor to F minor.

The relation of signatures is the reverse of the above; one flat is added to the flat-signature or one sharp subtracted from the sharp-signature. Thus, from three sharps down to two sharps, or from three flats down to four flats; either E♭ major to A♭ major, or C minor to F minor, — and so on.

The subdominant modulation is peculiarly convenient from any *major* key, because the tonic chord of that key (the chord with which, as a rule, the key is to terminate) is already the dominant chord of the desired (subdominant) key. Nothing could be easier or more natural than to transform this inactive tonic chord mentally into an active dominant chord, and proceed accordingly into the desired key. For example, the chord of C major (C-E-G) is not only the tonic of C, but at the same time a possible dominant triad of F major; all that is necessary is, at most, to add the 7th or 9th to this triad, and the transition into the subdominant key is practically inevitable. Thus:—

Ex. 12.



In a *later* lesson — not here — this harmonic coincidence will be turned to account in a chain of subdominant modulations (from major to major), in something like the following manner: —

Ex. 13.

In the subdominant modulations from *minor* (to minor) there is no such literal coincidence of the foregoing tonic triad with the dominant harmony of the coming key, simply because the tonic chord of a minor key is necessarily a minor triad, and therefore could not become a dominant chord (which, under all legitimate circumstances, must be a major triad, — with major 3d). But the *letters* which form the chord are nevertheless the same, and it is both simple and effective to raise the 3d of the minor tonic chord, chromatically, to the requisite major 3d. The 7th or 9th may be added at the same time. Thus: —

Ex. 14.

*(Note that the small letters are generally used to indicate the minor mode; and capital letters for major.)

The following example, in phrase form, illustrates a subdominant modulation, — from E minor to A minor: —

Ex. 15.

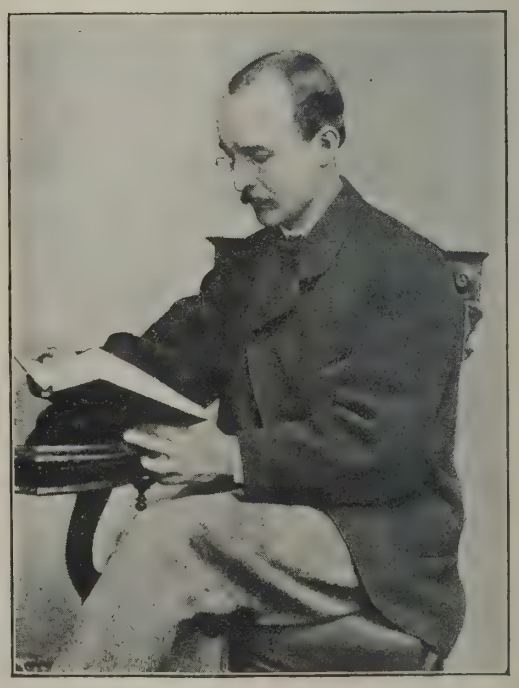
By introducing the proper accidentals, this phrase will also illustrate the subdominant modulation from *major* (E major to A major, — four sharps down to three). Write it out in that form, and compare the two versions at the keyboard.

EXERCISE 1. — Make a dominant modulation from every *minor* key; each one in a separate four-measure phrase, as usual, with the change of key near the middle of the phrase; either in simple (strict) harmonic form or embellished. At first, make a table of the chord-progressions, — from the tonic chord of each key (in any form) to the dominant chords, and also to the second-dominant or subdominant chords (in any form), of the prospective dominant key. Do this thoroughly, in writing, and at the keyboard.

2. Make a subdominant modulation from every *major* key, in four-measure phrases, as usual.

3. Make a subdominant modulation from every *minor* key, in the same manner.

AN EARLY PORTRAIT OF PROF. JOHN K. PAINE



THE MUSICIAN has received this portrait of the late Professor Paine from a reader, and takes great pleasure in reproducing it. The original photograph was taken in Cambridgeport, Mass., in 1866, when Professor Paine was twenty-seven years of age.

FIRST LESSONS IN FRENCH

A. RHEINGAUER

LESSON V

Un=a, an before a masculine in the singular. Ex.: *un instrument*, an instrument.

The phrase *de musique* (literally, of music) follows the noun which it modifies. Thus: —

Un instrument de musique, a musical instrument.

C'est (this is or it is) *un instrument.*

Est-ce (is this or is it) *un instrument?*

In the following sentence *qu'est-ce que* (what) stands for *what is:* —

Qu'est-ce qu'une flûte? What is a flute?

The second person plural of the imperative is like the second person plural of the present indicative, except that, in the imperative, the subject *vous* is not expressed. Ex.: *Nommez!* name.

Read and translate

Le piano est un instrument de musique, c'est un instrument populaire. Le violon est aussi un instrument de musique, comme l'alto et le violoncelle. Qu'est-ce qu'une flûte? — Nommez deux (trois, quatre) instruments!

VOCABULARY

To be committed to memory

Le piano, the piano; *un instrument de musique*, a musical instrument; *c'est*, it is, this is; *le violon*, the violin; *l'alto*, the viola; *le violoncelle*, the violoncello; *la flûte*, the flute; *comme*, as, like; *aussi*, also; *nommer*, to name; *un* (masc.), *une* (fem.), one; *deux*, two; *trois*, three; *quatre*, four.

Translate into French

1. Name a popular instrument. 2. Name two instruments. 3. What is a piano? It is a musical instrument. 4. What is a viola? It is also an instrument. 5. Is this a violin or (*ou*) a viola? It is a viola

LESSON VI

De (of) and the definite article *les* (the) are contracted into one word: *des* (of the).

Read and translate

Aimez-vous le piano aussi bien que le violon? Non, j'aime mieux le violon. Des quatre instruments — le piano, le violon, l'alto et le violoncelle — lequel aimez-vous le mieux? C'est le violon que j'aime le mieux.

VOCABULARY

To be committed to memory

Bien, well, quite well; *mieux*, better; *le mieux*, the best; *aussi bien que*, as well as; *lequel* (masc.), which one; *que* (as a relative pronoun), whom, which, that.

Translate into French

1. Do you like the piano? Yes, I like it quite well. 2. Do you like it as well as the violin? 3. Do you like it better than the violoncello? 4. What (*quel*) instrument do you like best?

LESSON VII

Comment trouvez-vous? how do you like?

Mon (my) before a masculine in the singular.

Ma (my) before a feminine in the singular.

(*Je vous demande*) *pardon, madame.* I beg your pardon, madam.

Il a, he or it has.	*a-t-il?* has he or it?
Elle a, she or it has.	*a-t-elle?* has she or it?
Il est, he or it is.	*est-il?* is he or it?
Elle est, she or it is.	*est-elle?* is she or it?

Since there is no neuter gender in French the subject-pronoun *it* is rendered either by *il* (standing for a masculine noun) or by *elle* (standing for a feminine noun). Ex.: —

My piano sounds badly. — What ails it? *Mon piano sonne mal. — Qu'a-t-il?*

My harp sounds badly. — What ails it? *Ma harpe sonne mal. — Qu'a-t-elle?*

Read and translate

Comment trouvez-vous mon piano? Sonne-t-il bien ou mal? — Pardon, madame, il sonne mal. — Qu'a-t-il? Il n'est pas bien accordé. Il a deux fausses notes.

VOCABULARY

To be committed to memory

Mon (masc.), *ma* (fem.), my; *sonner*, to sound; *mal*, badly; *pardon* (masc.), pardon; *madame*, madam; *accordé* (masc.), *accordée* (fem.), tuned; *que* (before a vowel *qu'*), what; *faux* (masc.), *fausse* (fem.), false; *une note*, a note.

Translate into French

1. How do you like my harp? 2. How does it sound? 3. Is it tuned well? 4. What ails it? 5. Does my piano sound badly?* 6. Is it tuned well? 7. Has it a false note?

* Translate: My piano, does it sound badly?

LESSON VIII

The French prefer the active to the passive in many cases. Thus: —

Cette mesure est à jouer forte. This measure is to be played forte.

En, of it, precedes the verb and must be used even though its English equivalent is not expressed. Ex.: —

Pour en marquer le contraire. In order to indicate the opposite.

Read and translate

Pour indiquer que le son d'une note est à renforcer, le compositeur se sert d'un *f* qui est l'abréviation de *forte;* pour indiquer le contraire, il emploie un *p* qui est l'abréviation de *piano.*

VOCABULARY

To be committed to memory

Pour, in order to; *indiquer*, to indicate; *le son*, the tone. sound; *une note*, a note; *renforcer*, to reenforce; *le compositeur*, the composer; *il se sert de*, he makes use of; *qui*, who, that, which; *l'abréviation*, the abbreviation; *marquer*, to indicate; *il emploie*, he uses.

Translate into French

1. What does the composer indicate by (*par*) a *p?* 2. What does he indicate by an *f?* 3. When (*quand*) do you play *piano?* 4. How is this (*cette*) note to be played?

PRACTICAL HARMONY TEACHING

Mr. Erb's article is so clear a presentation of a practical subject that it is given place in the LESSON CLUB Series. — EDITOR.

J. LAWRENCE ERB

This is an age of iconoclasm. Tradition, unless it be founded on reason and truth, is brushed aside as lightly as the veriest upstart of yesterday, if it stand in the way of progress. This is true in all directions, and to a very great extent in the educational world, though in certain departments of music-teaching progress has been much slower than in others, and the hold of tradition is firmer. The *science* of Harmony (to dignify it by a title to which it has only a doubtful right), it would seem, is especially in need of rehabilitation, particularly for the use of American teachers and pupils. To begin with, the great majority of text-books emanate from German, or other foreign sources, and the translations seem to have been made with a view to ambiguity rather than clarity of expression, so that the result is, in the language of a victim, "about as clear as mud." Often after careful perusal of a paragraph in these translated (!) works, one is forced to ask, "What is this in plain English?"

Then, too frequently the text-books are constructed illogically, without regard to pedagogic principles. The subject-matter is either introduced out of its proper order, or else it is so hedged about with exceptions and modifications that nothing but confusion results in the minds of the students. There is too much multiplication of rules, whereas true constructive musicianship should be hampered with as few as possible. In this respect even the best works on the subject are such flagrant offenders, that many teachers use the text-book only as a matter of form, neither requiring nor expecting a mastery of its contents, but relying upon verbal rules dictated to the class from time to time, and drawing upon the text-book chiefly for illustrations and exercises.

Harmony, we are told, is the science of the construction and connection of chords. Just how essential this science may be to the proper enjoyment of music, seems to be a question; some eminent writers contend that it is not necessary either to its enjoyment, or its appreciation, but this contention would be extremely difficult to sustain. There is no question that for the proper comprehension, and especially for the proper construction of music, the study of Harmony is absolutely essential; for if the genius of Bach or Beethoven or Mozart or Brahms required the discipline of a prolonged training in Harmony, — and the higher theoretical studies, — it is not likely that any lesser light can shine clearly without its aid.

Unfortunately, in our strenuous America, most music-students find their time, — and often their money — sadly limited, so that all the theoretical training they ever receive is generally crowded into one or two years in the Harmony class. Under these circumstances, it is of the utmost importance that the work should be done thoroughly and in a manner that will make a lasting impression; for there will be no opportunity to correct mistakes or to strengthen weak places, nor again to fix important facts by repetition year after year. What is done must be done once for all. This necessitates a very careful consideration of teaching material from much the same standpoint as that of the Arctic explorer, who is careful to take everything that would prove to be indispensable, and to discard everything that would be burdensome or unnecessary.

Every music-student ought first of all to have a thorough knowledge of intervals and their inversion and the construction of the major and minor scales. This is important, not only from the standpoint of musicianship, but also because it is a great aid to sight-reading. Of course, chord construction and connection are highly important from every point of view. Facility in modulation is a wonderful aid to thinking in musical language; it seems to loosen up the stiff joints, as it were, and to waken the dormant musical ideas that otherwise might never come into the consciousness. There are in the matter of modulation two ways of teaching them. One is by giving to the pupil written or oral formulas for modulation to each interval, major or minor, so that, if the formulas be memorized, he may always have at hand a correct, euphonious method of moving from any key to another, according to rule. This method effects a saving, both in time to the teacher and in mental effort to the pupil, and is to be recommended to all teachers who are not particular whether or not their pupils learn to think, so long as they get through the prescribed course. The second, and by far the most useful from the standpoint of the pupil's development and independence, is to make him work out his own formulas, for the sake of the mental training involved, and then, — forget or destroy them, to avoid getting into a rut. Any pupil who is not able to modulate without consulting a written or memorized formula, has not learned the alphabet of practical modulation and would better begin all over again to learn.

This suggests another matter in connection with the teaching of Harmony, namely, that to inflict upon the pupils nothing but figured basses is to educate them into machines, nothing more. Not one pupil out of a dozen, whose entire harmonic training has been devoted to figured basses, is really able to harmonize actual melodies, even though they may be in the bass; for figured bass harmonization is in reality nothing but a mechanical process, having in it nothing of musical creation. Harmony study to be efficient must, of course, at the first, have a large proportion of figured bass work, — it is the best means yet devised for teaching the strictly mathematical part of harmonic structure and fixes firmly in the pupil's mind the fact that all chords are reckoned

from the fundamental but are named for their relation to the bass. But in connection with this figured bass work there should be both written work in harmonizing melodies, figured and unfigured, in the soprano or other voices, and also work in harmonizing in each of these classes at the instrument, so that again the mind may be taught to *think* music.

Then, as a practical test of the actual harmonic acquirements of the pupil, it is well to have frequent, original compositions in the hymn, or other simple vocal form. Not that the compositions will, as a rule, be worth much, musically, — neither are a child's first essays in English composition, — but that the creative faculties may have an opportunity to assert themselves, and that the interest may be quickened, to say nothing of the educational value of such practical tests. Incidentally this sort of work will do much to correct another weakness that is so manifest among music-students, namely, that of *inaccuracy* in musical thought and expression. It is interesting to test pupils with familiar melodies, and to note the gross inaccuracies which creep into their notation, evidences of incorrect thought and apprehension. Hence it becomes apparent that musical dictation can be profitably employed in connection with Harmony study, and that the recognition of intervals and chords when struck upon the instrument or by voices is a necessary part of the musical training. It is a well-recognized law of language study that a new language is not mastered until thinking accurately in it becomes easy and natural. The same thing is true of the musical language; it is not mastered until thinking accurately in musical idioms becomes easy and natural. Therefore, all theoretical study should be directed toward making the pupil able to think fluently and correctly and to record his ideas with precision. The altered chords, especially the augmented chords, have always been considered a source of great difficulty to both teacher and pupil, and for some reason they seem to be but poorly understood by musicians. At a meeting of a club made up of New York professional musicians, some months since, the subject under discussion was *Harmony*, and the *Augmented Seventh Chords* were the theme of one paper, which was written by an eminent theorist and authority upon these chords in particular. As a matter or curiosity, the author of the paper asked, before it was read, how many of those present really considered that they had a good working knowledge of these chords, and *only two* responded in the affirmative. Yet the gathering included men of national reputation, organists, composers, authors, journalists, teachers, and even one or two college professors. The greatest difficulty seemed to be in recognizing the chords by name, — the unnecessarily ambiguous names, French, Italian, etc., were the ones used in the discussion, — and even after the paper was finished (and it was a masterly one), many were still in the dark. Their difficulty is a common one, resulting largely from this matter of nomenclature. There is no more objection to calling the Augmented Chords by the names French, Italian, German, etc., than there is to calling whole, half, and quarter notes by the names semibreve, minim, and crotchet; but there is the decided objection in both cases that the names mean nothing in themselves, are not in the slightest degree definitive. It would seem to be only good common sense that in all matters of nomenclature, where there is a choice, it is always best to use the name that defines, rather than an arbitrary term which could just as well be applied to anything else. There is certainly much less difficulty in this particular instance in treating the chords in question when described by their figuration, $\frac{6}{5}$ or $\frac{6}{4}$ or $\frac{6}{3}$, for these names at once not only label the chord, but place before the mind the actual intervals of which it is composed. Simplicity and directness are always important factors in education.

The meeting before mentioned disclosed another interesting and lamentable fact, — namely, that, while nearly every man present had studied Theory, some in America and some in Europe, yet their mastery of Harmony was so poor that many of them recognized even the simplest constructions with difficulty. (And an examination of the great mass of American compositions will show how superficial is the harmonic knowledge of most of our composers.) Yet they had all received the best of training under renowned masters, — at least they had studied in the classes of teachers of reputation. What was the matter?

It seemed at the time, and subsequent investigation has confirmed this view, that Harmony, as it is taught in nearly every class-room the world over, is not taught upon a proper educational basis, — that the method of handling the subject is not such as to make it a vital thing which takes hold of the pupil's mind and fastens there so that, so long as the mind endures, it will endure. This seems much to ask, yet it is only what happens in every case where the attention is aroused and the subject-matter presented in a logical, progressive, enthusiastic manner. Harmony is too often a *study*, not an accomplishment, which all should feel glad to own, which it really is. Harmony is the very color of the musical picture, the fragrance of the musical rose. How true this is can be demonstrated in every modern work, for without its harmonic variety what is modern music? Every educated musician seeks first for the *harmonic* content of a piece; it is the musically ignorant who are forever listening for the melody, the "tune." Harmony is the very soul of music; even melody to be most effective must be built upon a harmonic basis.

One great reason why the gentlemen mentioned, — and ten thousand others, — did not get the full value out of their Harmony study was because it was and is made too much a matter of rules. It is like the little boy, who, when asked his name, said it was "Johnnie *Don't.*" Spontaneous interest or productiveness can never spring from a code of rules. The average text-book contains probably 150 or more pages, of which at least a third is devoted to rules and cautions. Now, it is extremely doubtful whether any great composer ever consciously kept in mind even *fifty* rules while producing his masterpieces (much less fifty *pages* of them). In fact, it is a question whether all the essentials of harmonic structure could not be expressed in one third of that number of rules, if carefully selected and carefully worded. For the great weakness of Harmony text-books (the *best* sin equally with the *worst* in this respect) is that they lay down as law a great number of rules which are in a large measure survivals of the Middle Ages, and which are consistently disregarded, when occasion arises, by every modern composer, beginning as early as Beethoven. (Even the immortal Bach wrote his Harmony to fit the music, not his music to fit the Harmony.) Then, to square themselves with this fact, — for no theorist would have the temerity to declare that there has been no good music written since the beginning of the nineteenth century, — it is necessary to classify and label a great and ever increasing and ever varying assortment of exceptions, until the pupil's brain becomes entirely muddled, and he either loses heart or else goes his own way and harmonizes his compositions to suit his own sweet will. Now, either Harmony is or is not a living educational factor. If it is such, it should be taught to fit the requirements of to-day, not of a century or two ago. If it is not, — and the burden of proof rests entirely upon the person who declares that it is not, — it should be discarded like an old glove, or a crutch, or anything else that was all well enough in its day, but is now passed.

Among the reforms necessary to modernize the teaching of Harmony is the elimination of all rules that are not valid in the light of the best modern usage, while perhaps retaining in the form of suggestions such of the discarded rules as tend to the cultivation of a pure style (that much-abused term). In connection with the written work, there should be much analysis of masterpieces, much oral or keyboard work, both in forming and recording intervals and progressions, much attention to the harmonization of melodies, and sufficient original work to put the acquired knowledge to a test and to awaken the musical capabilities. Then, too, it seems about time to discard, — in work with mature minds, at least — the kindergarten practice of writing exercises in close harmony. Vocal scores are scarcely ever written so in real life, and the practice of close harmony is almost sure to result in stiff and unnatural voice-leading. Harmony study is for a practical end, and should be directed along practical lines. Therefore, open harmony should be the rule, as it tends to greater freedom and elasticity in voice-leading, and has the additional merit of being in line with the everyday method of part-writing.

That Harmony is *not* dry and uninteresting is evidenced by the almost universal fondness for chords, either alone, or in combination, and for part-singing or *ensemble* work of any kind. If practical Harmony is so interesting, the more intimate acquaintance resulting from a close study of the subject should make it perfectly fascinating. That it can be made so there is every reason to believe, if it is conducted along rational, modern educational lines.

FIRST LESSONS IN GERMAN

F. C. BURKART

LESSON V

The nominative and accusative of the indefinite article differ in the masculine only.

	Masc.	Fem.	Neuter
Nom.	*ein*	*eine*	*ein*, a, an, one.
Acc.	*einen*	*eine*	*ein*, a, an, one.

Kein, no, is inflected like *ein*.

The following forms of *ein* (one) stand for a noun understood.

	Masc.	Fem.	Neuter
Nom.	*einer*	*eine*	*eins*, one.
Acc.	*einen*	*eine*	*eins*, one.

Keiner (none) is inflected like *einer*.

The nominative and accusative of a neuter noun are always alike. Ex.: —

Das Instrument (nom. and acc.), the instrument.

Die Instrumente (nom. and acc.), the instruments.

Ich habe, I have; *Sie haben*, you have; *man hat*, one has, people have.

Read and translate

Man hat viele Instrumente, wie die Orgel, das Klavier, die Geige, das Cello, die Harfe, die Flöte, u. s. w. Ich habe weder eine Harfe noch eine Flöte, aber ich habe ein Klavier und eine Geige. Ich habe zwei Instrumente. Wie viele Instrumente haben Sie? Ich habe nur eins. Haben Sie eine Geige? Nein, ich habe keine.

VOCABULARY

To be committed to memory

Das Instrumente, the instrument; *viele*, many; *wie viele*, how many; *wie*, such as; *die Orgel*, the organ; *das Klavier*, the piano; *die Geige*, the violin; *das Cello*, the cello; *die Harfe*, the harp; *die Flöte*, the flute; *u. s. w.* = *und so weiter*, and so forth; *haben*, to have; *zwei*, two; *nur*, only; *einer* (masc.), *eine* (fem.), *eins* (neu.), one; *keiner*, *keine*, *keins*, none.

Translate into German

1. The organ is (*ist*) an instrument. 2. The harp and the flute are (*sind*) instruments. 3. Have you a piano? Yes, I have one. 4. Have you a violin? No, I have none. 5. I have neither a piano nor a violin, but I have a harp and a flute.

LESSON VI

The possessive adjective *mein* (my) is inflected like *ein* (Lesson V).

The personal pronoun of the third person singular takes the gender of the noun it represents. Thus, when speaking of *eine Geige* (a violin), use *sie* for *it;* of *ein Klavier* (a piano), *es* for *it*.

The nominative and accusative of an ordinary adjective preceded by the indefinite article take the following terminations: —

	Masc.	Fem.	Neuter
Nom.	*ein——er*	*eine——e*	*ein——es.*
Acc.	*einen——en*	*eine——e*	*ein——es.*

Therefore: —

Nom. *Ein guter Klang*, a good sound.

Acc. *Einen guten Klang*, a good sound.

Nom. and Acc. *Eine gute Geige*, a good violin.

Nom. and Acc. *Ein gutes Klavier*, a good piano.

Read and translate

Mein Klavier ist neu, aber es klingt nicht gut, es ist verstimmt. Meine Geige ist alt, aber sie hat einen guten Klang. Habe ich eine alte oder eine neue Geige, ein altes oder ein neues Klavier?

VOCABULARY

To be committed to memory

Mein (masc.), *meine* (fem.), *mein* (neu.), my; *neu*, new; *alt*, old; *klingen*, to sound; *der Klang*, the sound; *verstimmt*, out of tune.

Translate into German

1. I have two instruments, a piano and a violin. 2. My violin is out of tune; it does not sound well. 3. How (*wie*) does the piano sound? It is in good tune.

LESSON VII

Alle (nom. and acc.), all, may precede a plural noun of any gender. Thus: —

Alle Instrumente, all (the) instruments.

Ich mag, I like to; *Sie mögen*, you like to.

Gern, gladly; *lieber*, rather; *am liebsten*, best.

Ich mag lieber, I like better, I prefer.

Ich mag am liebsten, I like best.

Ich höre gern, I like to hear, to listen to.

Ich höre lieber, I like better, I prefer to hear, to listen to.

Ich höre am liebsten, I like best or best of all.

Welch adds *es* in the nominative and accusative neuter. Therefore: —

Welches Instrument (nom. and acc.), what or which instrument.

A sentence takes the inverted order when it does not begin with the subject. Ex.: —

Das eine mag ich. . . One I like.

Read and translate

Ich höre alle Instrumente gern, das eine mag ich jedoch lieber als das andere. So höre ich z. B. die Harfe lieber als die Bassgeige. Welches Instrument mögen Sie am liebsten?

VOCABULARY

To be committed to memory

Alle, all; *gern*, gladly; *lieber*, rather; *am liebsten*, best; *der, die, das eine* (the), one; *der, die, das andere*, the other; *gern mögen*, to like; *jedoch*, however; *als*, than; *so*, so, thus; *z. B.=zum Beispiel*, for instance; *die Bassgeige*, the bass-viol.

Translate into German

1. I like many instruments. 2. Are you fond of hearing a flute? Yes, but I like the violin better than the flute. 3. What instrument do you prefer to the organ? I like the organ best of all.

LESSON VIII

When *um zu* (in order to) is used with a separable verb, *zu* goes between the prefix and the verb. Ex.: —

Um anzudeuten, in order to indicate.

The infinitive with *zu* is often used after *sein* (to be). Though active in form, it has passive meaning. Ex.: —

Der Takt ist kräftig zu spielen. The measure is to be played forte.

In dependent clauses introduced by a conjunction the verb stands last. This arrangement is called the *transposed order*. Ex.: —

Dass der Takt kräftig zu spielen ist. . . . That the measure is to be played forte. . . .

For the normal and inverted order of words compare Lesson I.

Read and translate

Um anzudeuten, dass eine Note, ein Takt oder auch eine ganze Passage *laut* oder *kräftig* zu spielen ist, verwendet der Komponist in der Regel das Wort *forte* (abgekürzt *f.*). Das Gegenteil von *laut* ist *leise;* das Gegenteil von *kräftig* ist *schwach*.

VOCABULARY

To be committed to memory

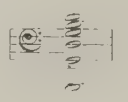
Um zu, in order to; *andeuten*, to indicate; *dass*, that; *die Note*, the note; *der Takt*, the measure; *die Passage*, the passage; *ganz*, whole; *laut*, loud; *kräftig*, strong, loud, forte; *leise*, low, gentle; *schwach*, soft, weak, piano; *verwenden*, to use, to employ; *der Komponist*, the composer; *in der Regel*, as a rule; *das Wort*, the word; *abgekürzt*, abbreviated.

PRACTICAL ACOUSTICS

DR. S. N. PENFIELD

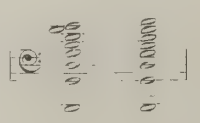
In our researches thus far into the realm of Acoustics, we have viewed things from the standpoint of single tones, or in other words, from that of the soloist. We must now consider them from the view-point of harmony. In combining and massing tones it is natural for us to follow the path blazed for us by nature herself — the tone mass which we have denominated "Nature's Harmonic Series." A. B. Marx, in his *Musical Composition*, worked up directly from this basis, and he is on much firmer foundation than the systems of some later theorists who have evolved systems and explanations from their own brains and from superficial observation.

Here then is the tone mass given us by nature as far as sixth of the series,

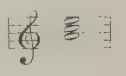


a chord sweet, pure, noble, rich, satisfying. Let us for the moment forget its effect and look at its structure. We notice a firm, broad pedestal on which rests a major triad. It is like the Eiffel tower; its lower story or interval flaring out broad (here an 8th), then each successive story or interval tapering (here 5th, 4th, major 3d, minor 3d).

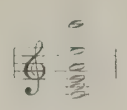
It has three G's (fundamental), two D's (5th), one B (3d or weaker tone). The tone mass might on such a base be built up higher by addition of 7th, 8th, and 9th tones of the series, noting that for practical use we must push the number seven upward about one fourth of a step to find a tone in our chromatic scale so that there are two minor 3ds, 5th tone to 6th and 6th to 7th. Thus we have with seven or eight tones the all-important chord of dominant 7th or with nine tones the dominant 9th,



these mighty chords underlying all modern developments in harmonic structure, furnishing the surest means of modulation and literally dominating the musical situation. Thus far it is clear sailing. But what about the minor chord? Evidently here we are on different ground. Take the chord



and we have minor 3d below, major 3d above, a seeming reversal of nature's order. Theorists have tried to explain this in some way or other, generally as parts of two major triads stuck together; but Riemann rather caps the climax by calling the top note (E in above example), the fundamental, then building downward with under 3d and under 5th, so that this would be, according to him, the chord of E minor instead of A minor. His minor tone mass would then appear to be



thus having from top (fundamental) downward 8th, 5th, 4th, major 3d, minor 3d, an exact reversal of the major. Veritably an Eiffel tower standing on its apex! The theory is an exceedingly ingenious one, but encounters the fatal objections that there is nothing in acoustics which supports it, and that the ear invariably expects the fundamental or strong support at the bottom, as much as the eye in architecture. Tone formations or architecture built downward may be interesting and effective, but we call it in each case "inverted."

Stalactites are curious and interesting, but we cannot walk underneath them with the same security and confidence with which we walk around stalagmites. The minor chord is of course built upward as much as is the major, and with its sombre effect it represents to us a phase and shade of life faithful and true to our experiences, for the symphony of life is largely written in the minor mood. As to its derivation, it suffices us that nature is not confined to one method or order. She has, indeed, no rule without its exceptions. Looking now again at our tone mass, we learn from it that nature shapes chords with larger intervals beneath and smaller ones above. In fact, the ear tells us that 5ths lower than

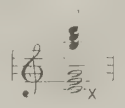
or 3ds lower than

do not blend well; that triads in octave next below middle C are more effective in open position, while close position triads are at their best within the octave and half next above middle C; also that there is a limit of height in the scale, above which there is no real blending of the tones into the combination which we call a homogeneous chord. Composers should be very careful to observe these limits. Also the composer learns by observation and developed instinct how to balance his tone masses, to have a suitable bass foundation, the intermediate chords complete, without certain tones being unduly prominent or unduly weak, and with the melody given by instruments of suitable timbre always dominating the situation, and where brightness is especially in evidence, producing the marked effect of the 1st overtone by putting the violins in octaves or adding a flute in 8a to melody, and in great masses the piccolo two octaves above, etc. For richness of chords and contrasts of tone color the orchestra has, of course, the advantage over any other means of music production, for here all shades of timbre are included, which may be massed, or some one group of effects may be taken separately and offset against other groups, *e.g.*, the string family, the wood-wind family, the brass family, and, indeed, the quartet of French horns, a tiny family complete in itself, and in the military bands the saxophone family.

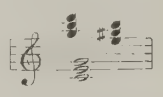
The string family is, of course, the most important and most independent, homogeneous in quality and capable of the most rapid execution and also of the most earnest and soul-stirring sentiment.

Now we turn again to the pipe organ, which is in one sense the king of solo instruments. Yet in another sense it is a great aggregation of instruments, indeed an orchestra more or less complete. Organ builders are all of the time producing new stops of all conceivable timbre and great beauty of tone, many of them available only for solo effects and others useful only in combination. Also,

as we have already seen, there are registers of 16 ft., 4 ft., and 2 ft. in addition to the true pitch, or 8 ft. tone. These enable the player to give out full rich chords, as in a complete orchestra. We have already seen that the organ is deficient in overtones, so that its natural tone is a little dull. When the music calls for brightness, the organist adds to his 8 ft. tone a 4 ft. stop, and for brilliant effects on a pretty full organ he adds a 2 ft. stop (15th), and with this generally a 12th or $2\frac{2}{3}$ ft. stop, thus securing the effect of three overtones. This is effective and legitimate if the 12th be not loud enough to be heard as a separate tone, as otherwise we should hear this combination,



(whole notes the main or 8 ft. tone, quarters the tone of 12th). Now we come to the mixture stops, under various names. They have for each note three or more ranks or sets of pipes tuned mostly in octaves and 5ths, in pitch from one and one half to three octaves above the fundamental, and containing in some old organs a third in the second or third octave (10th or 17th). It is needless to say that a 10th would give in harmony discords hard to be absorbed or covered up. (Example with 10th and 12th.)



The use of these 3ds is very properly abandoned in modern-built organs. Now it is but a short step from brilliancy to screaminess, and as the latter is pretty surely the result of addition of these high tones, it is counteracted by a 16 ft. stop to balance the high tones. Thus every chord is full and rich. Still, organists should take notice that a 16 ft. stop in a full chord played low in the keyboard will bring thirds down into the octave prohibited for them. Let the organist play this chord on a double open Diapason or Bourdon stop alone

and he will appreciate this caution. An organist should also observe that while it is always legitimate and effective to double a bass part by the octave below, a 16 ft. stop in the manual serves all other voices in the same way, which is a ridiculous thing in most contrapuntal movements, however it may be in purely harmonic or chord effects. The under octave is never absorbed into the fundamental, as is the octave above. The organ in all its big and smart effects is on the orchestral footing and should be treated from that standpoint. Now the orchestral composer is always doubling his bass parts with octave below for solidity, and occasionally his melody with 'cello or bassoon or bass clarinet, but never the subordinate voices, especially if these lie at all in true melodic parts. An organist who has not the true orchestral instinct should never attempt such music. The effects produced in the average organ recitals by the average organist "make the judicious grieve."

We now call attention to another variety of tones called "resultant tones." In a number of organs we find a draw stop labeled "32 ft. resultant." Here there are for each key two organ pipes; for the lower C one 16 ft. long and one $10\frac{2}{3}$ ft. long, the latter sounding G, a 5th above the other. Therefore these two pipes will have the ratio of vibrations to each other of 2 to 3 (actual vibrations thirty-two and forty-eight to the second). As each second vibration of the former will coincide with each third of the latter, there will thus be a stronger sound wave at these points, or sixteen such to the second. These special waves will give their own musical tone of 32 ft. pitch. The same tone would result if we would take the same G with the C next above (8 ft. tone), these giving respectively forty-eight and sixty-four vibrations to the second. They would coincide at sixteen points, giving again the 32 ft. tone. But the former combination is the more effective. Other resultant tones might be noted, but they would be of little practical interest to the musician.

Probably most persons have wondered how it can be that in a symphony or other complex orchestral composition where there are a myriad of separate parts or voices, the vibration waves do not interfere, but each voice is distinctly audible to an experienced ear. How can sound waves travel in all directions, at all degrees of pitch, and be absolutely synchronous?

It seems miraculous, yet there is quite an analogy between air waves and waves of the sea. Let two persons toss each a pebble into the water, and from each spot will be seen concentric waves starting and spreading. Soon the two series encounter, and cross each other, continuing their interlacing movement till the original movement is spent. A dozen pebbles may be dropped and a dozen series of concentric waves start, each true to its own centre and its own course. There are here certainly complications impossible for the eye to follow out. But a trained ear is far more acute than any eye and can trace these tone ramifications, especially as our best music has ever a harmonious relation at all points.

We come now to an important point for orchestral and choral conductors to consider, viz, the limit in effective size of orchestras and choruses, also the effective placing of the same. It is well known that the intensity, force, and body of tone is increased by increasing the units that produce this tone, yet not in exact proportion to the number of these units. Two singers on a part do not double the force of one. One hundred on a part do not, under average conditions, give ten times the force of one or two sonorous voices on a part, and the more we increase the numbers, the less body do we add to the tone. In time we reach the limit of effectiveness and the current sets the other way, the last ones becoming a drag instead of a help. Not that the body of tone becomes smaller, but it becomes more and more impossible for the units of tone to synchronize to the ear of any auditor, place he himself wherever he will in the auditorium. This was strikingly illustrated at what was called the Boston Jubilee under the management of Patrick J. Gilmore in 1872. An immense temporary auditorium of no great height was constructed and musical events of all sorts were there exploited. But the real features of the occasion were the choral numbers with (nominally) ten thousand voices and orchestral numbers with (nominally) one thousand instruments. The effects were certainly novel and interesting. Yet they served more to point a moral than to adorn a tale. The writer has heard elsewhere and on many occasions a greater effect of intensity and bigness from forces one third and even one fourth the size of these. Evidently this was largely the result of the necessary placing of the forces. The sopranos starting just back of the first violins ran back to a tremendous distance. The orchestra was massed in centre, penetrating the chorus like a wedge. The double basses, two at a desk, stretched back in one seemingly endless row, etc. The performers could, by watching the leader's baton, give simultaneous tones, but there are always enough performers, especially singers, who are not well attentive to the baton, and the more so the farther away, so that frequently the effect of precision was conspicuous by its absence. The most effective movements were the slow ones, and throughout there was dulness and confusion. Smart movements, like the opening of Beethoven's Fifth Symphony, entirely lacked the effect of attack, crispness and sudden stop. Evidently the orchestral players mostly did well, but every tone came to the ear gradually and retired gradually. It could not be otherwise where the performers were located some of them from 500 to 1000 ft. apart. Tone travels but 1090 ft. per second, and anything like a simultaneous tone to any one ear was, of course, impossible. Also there are some points of every stage from which the musical effects are practically nil. Many of the singers and players must have been located at such points. We do not need to draw the morals, for they point themselves.

A word now with reference to the matter of absolute pitch. The scale of vibrations referred to, with middle C 256 per second, was for a long time the recognized pitch. For some reason the pitch gradually rose till it was more than a half step higher.

Finally the tide turned. In 1900 the International Congress of Music at Paris established the "international pitch," as 870 vibrations (435 double vibrations, as we reckon them), for A next above middle C. That is now our concert pitch. It will be seen that this is a trifle higher than the pitch noted in our first paper.

INITIATIVE IN THE MUSICAL LIFE

W. FRANCIS GATES

In business life there is often heard the remark, 'Yes, Jones is a good reliable sort of fellow, but he lacks initiative; that's the reason he doesn't get along any better. The speaker means that Jones can drag things after some one else starts them, but he cannot start them himself. He lacks in originality, he does not seem to be able to think out a new thing or plan a new method of action. That phrase "lacks initiative" expresses his status.

In other words, Jones is a man who works in a rut. Let some one else start the rut and he runs well in it. He is a good servant, not a good master.

In this there is a hint for the music teacher. Just so far as one is willing to stay in a rut, by so much is he a failure. To be a success the teacher must have initiative as well as the business man. If the musician has no power of doing something different, his competitors will distance him.

This initiative is seen, not in new-fangled short cuts to perfection, patented nostrums, or technical wonders, but in using varieties of method to suit different individualities, looking out new music, using novelties as well as standard compositions, building interesting programs, getting the public attention by showing a wide-awake spirit. This initiative makes openings for the more solid features of learning and the real skill in instruction. It is the opening wedge that gives entrance to the broader features of musicianship.

While there is more opportunity in certain lines for scholastic initiative in the flourishing school of music, there may be more business originality shown by the instructor who teaches privately. A conservatory connection tends to segregate a man from the activities of life. Many a conservatory teacher would be an abject failure if put on his own — not merits, for he may be an excellent instructor — but on his own initiative.

The man who is hoeing his own road may lose in musical intensity but he gains in outlook and in breadth of humanity. But that is another matter. Initiative will find place in any walk of life. It simply means plowing out one's own ruts instead of slavishly following the furrows of one's predecessors. The man who has a fair amount of knowledge, tact, and initiative is bound to succeed.

If the community in which he finds himself is not a fertile field for his efforts, he will not simply lay down and groan his way through life; his initiative will lead him to find one wherein he will have proper scope.

There is a saying to the effect that "it is only a fool who never changes his mind." So it is only the man lacking in initiative who will not change his location or his business connections. This is treating the musical life from a business standpoint; but much of the reproach that has come to the profession springs from the fact that members of it went through life with eyes closed to the business side of existence in this busy world.

IMPRESSIONS OF A FRENCH MUSICIAN IN AMERICA

JULIEN TIERSOT

When at the beginning of last winter I left Europe for America, it was not merely for the sake of speaking to the public of the new world about French music. I meant to profit by my visit, *i.e.* to gather information in regard to the condition of the same art in the country that I was about to go through; above all, in regard to history and ethnography, as my former work had prepared me for the task. To that end the minister of public instruction had the kindness to charge me with the official mission of making a study of the development of music, — a mission of which I was expected to give an account on my return to France.

The account will contain my principal observations; but I think it will, even before it is finished and published, be of interest to the public, which I have made the subject of my observations, to get a general idea of my work, and to learn how a Frenchman has been impressed by the simplest manifestations of music among the most modern people on earth.

For it must be understood that modern music will not be the principal object of these observations. As far as music goes, I want to state that I have found the American music in full formation; I am, however, not able to say just yet if the work which is to characterize it is already visible. In New York, Boston, Philadelphia, New Haven, Pittsburg, Cincinnati, Chicago, and in a good many other less important centres the elaboration of the American music seemed to be in a state of full activity. During that most hasty trip I became acquainted with the names, the works, sometimes also with the most distinguished composers themselves now to be found on the new continent. First of all with the foremost American musician, J. K. Paine, whom I had the pleasure of meeting at Harvard University and whose death closely followed my return to France. With him there were Arthur Foote, George Chadwick, Arthur Whiting, and F. S. Converse who, this very year, has realized what it means to produce one of the first American operas worthy of the name, and have it performed: *The Pipe of Desire*, which was given in Boston at the beginning of the present year, 1906. In addition to this group, all living in the capital of New England, which at the same time seems to be the musical centre of the United States, it is proper to mention a European who was born in a city (Mulhouse, Alsace) that was French at the time when he saw the light of day. He has lived in America for some time, and has, by his own work as well as his personal influence, done a great deal toward the growth of the noble traditions of the most modern and most advanced art, — I mean Ch. M. Loeffler.

Sad reasons only too well known by American musicians did not allow me to enter into any direct communication with Edward MacDowell, whose high standard is noted and whose name I have read many a time on concert programs.

At Yale University, New Haven, I had the pleasure of seeing among my audience Horatio Parker and David Stanley Smith; the latter was a pupil of the French teacher, Widor. In Cincinnati I met, after seventeen years, Frank van der Stucken, who at the exhibition of 1889, in Paris, was the first one to make the French public acquainted with the compositions of the American school.*

I could even quote the names of some who are not so well known to the public, but they will soon be heard of again. Although it seems unwise to appear as a prophet, I take the liberty to point out, after having listened to some fragments of an opera which he is composing at present on essentially American subjects, Arthur Nevin (at Sewichley, near Pittsburg). I believe that this young musician will soon appear among those who are going to add to the vitality of the art of their country.

I am only speaking about composers now, as I did not wish to carry the list of artists, teachers, conductors of orchestras, etc., too far. I have had a chance to ascertain their number and their merits, and just meant to indicate how much interest is taken in the untiring and meritorious efforts of foreign musicians who to-day live on the American continent.

But it is especially the historical side of an art that I am interested in, and the American music has no history as yet. How could it be otherwise when, among all the musicians that I have mentioned, there is, besides Paine, not one who has reached the age of fifty? The history of the American music lies in the future; its first chapter has not come to an end, I may even say its preface.*

It looked to me, however, as if the American mind was particularly anxious to have its most recent manifestations regarded as a matter of history. While traveling I have been interviewed several times by reporters eager to let their readers know how a Frenchman was impressed by the condition of the American music, and I must say that the answers which I gave to their questions were not as a rule reported in the most truthful way. Thus they quoted me as having said that there was no originality to American music, that there could not be any, since it was nothing but an imitation of European music, and that as far as original music was concerned, the new continent had no other than the music of the Indians and the negroes.

I have never expressed any such opinion. As a matter of fact, I said that the American music proceeded from the European music. This is simply the statement of a fact that cannot be refuted. Indeed, the American music does not differ from the European music, either in form, or in technique, or in the manner of execution. Nearly all its composers owe their musical education to German, or French, or Italian masters; even to-day it cannot be said that the art of composing is taught in the American conservatories in a well-organized and truly national way. And in carrying the matter in question beyond the sphere of art, we may say that the American nation itself is not a product of the soil on which its oldest families have scarcely lived for two centuries, that it is formed of elements which time itself has not as yet closely joined; the people itself originates from different parts of Europe. Is there any reason why artists with a European ancestry should not date back to European art schools?

The American music does not differ from the European music in its manifestations; we simply have "modern music" on both sides of the ocean. The Americans practice this music as well as others, and by expressing new ideas in old established forms, thus developing these forms, they surely will succeed in forming, within a brief time, a school which, if it draws its vitality from the vigor of the powerful nation, will soon be able to rival with the French, German, Italian, Russian, etc., schools.

Again I say: the future will tell.

It is obvious that the music of the Indians and the negroes does not constitute an art in the strict sense of the word as we understand it to-day; it corresponds to the most primitive, traditional oral art of Europe, the popular song. Yet there are noteworthy dissimilarities to be mentioned. In the first place, we have to distinguish radically between the music of the negroes and the music of the Indians. None but the latter is the real outgrowth of the American soil, of which the Indians are the aboriginals. But the negroes and the white people alike come from foreign countries, — the negroes from Africa and the white people from Europe. Consequently there is no close relation between the two. And that is also why we cannot claim that any original American art is to be obtained by developing the ethnic qualities of the music of the Indians or the negroes, for the situation differs entirely from the conditions in the old continent. When French or Russian or German or Scandinavian musicians become inspired by the popular melodies of their country, and impregn their works of art with them, they proceed in a logical and undoubtedly beneficial way, for in doing so they draw from the sources of national inspiration. But in America, where the Indians are, in comparison with their conquerors, an inferior race, where the negroes have, for a long time, been held as slaves, there could not be the same close relation as it exists between the different social classes of one and the same people.

Besides, I fear that the effort to create an American art, based upon the primitive music of the Indians or the negroes, will lead to an artificial result. Nevertheless, the attempt can be made, and it is quite possible that the combination of these disparate elements will take effect some day, and lead to something really new. All these possibilities must be left to the future; I do not claim to know how the problem will be solved.

I succeeded, however, in finding out how much interest is taken in questions of this nature by the best minds of America, the very country which, as yet without a past, has the most natural desire to know what there will be in the future. I was given an incontestable proof of this during a conversation which I had with a man who, without a doubt, is best qualified to define the various aspirations of the American people. On the day that I had the pleasure of speaking about the French folk song at the White House, President Roosevelt approached me at the end of my lecture and told me, on his part, what he knew about the American popular song. After having called my attention to the interest which is taken in the scholarly researches regarding the music of the Indians by Nathalie Curtis (of whom I mean to speak more elaborately in the course of this article), he made his own observations known. He quoted in particular a war song that he had heard Indians of a Western tribe sing, *The Morning has come, the Wolves have appeased Their Hunger.* That was all the poetry of the song, and these words were repeated again and again. The quick and abrupt rhythm of the song, which became more and more animated as it progressed, was accompanied by evolutions of the singers, who either on foot or on horseback kept turning until they fell down from exhaustion.

"These savages, who fight ferociously in battles," continued the President, "are strongly attached to their families. They like to sing sentimental songs, but these songs are not, strictly speaking, love songs, intended for the beloved woman; they are more likely to be offered to the mother or a child. Besides, the words of these songs are quite prosaic, as a rule.

The negroes have a well-developed instinct for music. They are often heard to improvise, and speak to each other in singing. The President spoke of an example that he witnessed himself: A negro was working in a field; another one came along; they bow and speak to each other. But does their dialogue consist of simple words? By no means. The first one has spoken in a truly musical intonation, the other one takes it up and answers in the same way.

When the conversation drifted from things within the United States to other recollections particularly interesting to the President, he also quoted a children's melody of Dutch origin, a song that may have given him the first musical impression in his life. When he was connected with President Kruger, these two leaders of their countries began, while preoccupied with the most important matters, to sing that same old song which reminded them of their common origin.

Finally the President spoke to me about the songs of the Japanese soldiers, those terrible warriors, who, after a battle is finished, and their work as soldiers has come to a stop, sing, in order to divert their minds, songs full of sentiment.

This is the sum and substance of the observations which the President of the American republic made to a French musician; they go to show how much importance he attributes to the popular songs of the different nations.

But that is not all; he did more than that, for, a few days later, he uttered words which were made public. They showed that he was deeply impressed by the ideas exchanged during the above-mentioned conversation. At a reception which he gave to a group of colored students of the Industrial Institute of Manassas, Va., who were introduced to him by Booker T. Washington and the Rev. Edward Everett Hale, chaplin of the Senate, he listened to several songs which they sang before him; then he addressed the meeting as follows:—

"The other day a great French literary man who was particularly interested in popular songs, in the music developed by the different peoples of the Old World, came here, and he happened to mention incidentally to me that so far as he could see there were but two chances for the

* I have found an account which I wrote myself about the American concert. It was conducted by Van der Stucken at the exhibition of 1889, and I have made a note of the names of the following composers: Arthur Foote, E. A. MacDowell, G. W. Chadwick, Dudley Buck, H. Huss, J. K. Paine, A. Bird, Van der Stucken, Margaret Ruthven Lang. These are almost exclusively the same names that I have seen this year.

* I am well aware of the fact that distinguished writers, including O. G. Sonneck of Washington, have begun to study the manifestations of the American music of the past. But they will admit themselves that although the matter presents interesting elements in regard to the pursuit of music, they cannot claim it to be an *ensemble* of art matter that is complete and definitely formed.

development of schools of American music, of American singing, and those would come, one from the colored people and one from the vanishing Indian folk, especially those of the Southwest.

"I want all of you to realize the importance and dignity of your musical work, of the development of music and song among your students. I feel that there is a very strong chance that gradually out of the capacity for melody that your race has, we shall develop some school of American music. It is going to come through you originally.

"Other things shall be added to it or ought to be added to it, but that must remain as the basis."

I thought it best to quote words so characteristic spoken by a man like him.

GRADED COURSE QUERIES AND ANSWERS

THOMAS TAPPER

A. F. L.—Sufficient technical material is given in Grade I *Studies* to answer all purposes. Teachers who have used this book report that they find enough matter for technical acquirement. This means, of course, or should mean, that all the preliminary practice, the inauguration of music lessons by any particular method proceeds with this work or has been carried on before the book is taken up. Furthermore, many teachers prefer to mark for each pupil individually the most needed exercises. For this reason no independent book of technics for the first grade is provided. A book of technics for Grades II and III, one for Grades IV and V, and a book of other studies for Grades V, VI, and VII are in preparation. They will supply abundant technical material in addition to that given in the volume of studies for all grades above the First

To begin with, the hand is so unformed, its requirements are so individual, that the teacher will secure better results by using the technics given in Grade I *Studies* and by supplementing them with such exercises as she discovers are needed by each pupil according to his personal demands, than by subjecting every hand to the same series of technics, and thereby probably doing in some cases more harm than good. Read Miss Chase's article now appearing in THE MUSICIAN.

TEACHER.—(*a*) The compositions of this book need not be taken in order. It is recommended that they be used in conjunction with this Manual and the *Book of Studies* for two reasons: (1) further exemplification of points which the student is working upon; (2) purely for recreation. If the teacher desires to use any numbers from Grade I *Pieces for Sight Reading*, care should be taken not to permit the pupil to become too intimately acquainted with them, so that sight reading may permit a fresh and unbiased test every time it is taken up.

(*b*) How to use Grade I *Pieces* in conjunction with this Manual is indicated in the following tabulation. The numbers refer to the number of each composition in the *Book of Pieces*

I	Voice Leading
II	Melodic Analysis.
III	Harmonic Analysis.
IV	Form Analysis
V	Sight Reading
VI	Memorizing
VII	Elementary Theory.
VIII	Music Dictation

The relation of lessons from book to book is explained in Manual I, Preface

SENACA. Every pupil should be provided with a music note book in which all written work may be kept intact and the corrections frequently studied. The teacher should follow the custom of writing for the pupil in this note-book all of the items of the next lesson. This strict attention to what the pupil is expected to prepare implants the habit of complete and careful work. This is of much importance. From it the pupil learns that music is an exact science, a beautiful art, a subject of study that must be attended to in a strict business way, like all other matters of life. This conviction once implanted, the pupil will be more likely to retain what René Descartes calls the most usual thing in the words, the *sens communs*. It may save him from striving in the face of danger to create an atmosphere in which he dreams and loses his grip on the essentially simple nature of things.

L. L.—With the proper training from the very first lesson the pupil will never suspect that music is impassably difficult, but that it becomes eventually rich in its literature and meaning. The pupils who pass from grade to grade and find the way harder and harder to travel are simply attempting to do a large task with small means. If, from the beginning, the foundation is widely constructed, if no illogical and unnecessary element be included, if practice and study in every requisite be begun and developed at the proper time and not set aside, the pupil will play easily, advance naturally, and find great delight in the art. At the same time he will become a thoroughly appreciative music lover. Impress your pupil with the beauty of music and do not dwell on its difficulty.

AMY B.—Use the compositions given in the Manual I for keyboard practice just as you would those of the *Book of Pieces* or the *Book of Studies*. The central idea of each lesson should be carefully noted and presented as a part of the general lessons. Thus the objective study of music is made to yield its analysis. Adhere as much as possible to the order given. All the instruction found in the Manuals should be made use of in the performance of any other music. Regard the power gained by the study of Manual I as an indispensable point of view from which to proceed to the study of everything in music.

A SINGER
(Published by Marcel Legay, Paris)

THEORY STUDENT.—There is never any harm in calling things by their proper names, but there may be abundant harm in giving too much information before the pupil has practiced the art enough to grasp the meaning of the facts presented to him. The teacher's discrimination must decide to what extent the pupil shall add to his practice of music through acquaintance and knowledge of music. The small amount of music thus provided in the books of Grade I of this Course must be used by the teacher as she finds the individual case permits.

CLASS OF 1907.—By all means institute a club among your pupils. Let it be as general as circumstances demand. Remember that the aim of a club is interest. Restrict it little: permit as many as possible (during the year) to participate in its programs. Have a president, secretary, and for each meeting, a chairman. If you have never before conducted a club, devote your energies this coming year to the composers. *First Studies in Musical Biography* (published by Theodore Presser) will furnish all the necessary material: text, illustrations, chronology, questions.

In regard to your query concerning the frequency of meetings, does this not lie entirely with your club members? Consult them and decide with the possibilities of the majority.

HARMONY.—(*a*) Your query has been so often addressed to me that I have supplied in the *Graded Course* Manuals enough instruction in Elementary Harmony to permit the young pianist to recognize the intervals, triads, dominant seventh chords, and the cadences. See particularly Manuals II and III.

(*b*) No, the Manuals are *not* for the teacher alone. Every pupil should have one. The works they contain are not only to be analyzed but performed. (See Preface, Manual I.)

NOTE

Albert D. Jordan, assisted by Miss Helen Davies, soprano, gave a significant organ program recently at the First Methodist Church, London, Ont. It is probable that Mr. Jordan will give Handel's *Messiah* with his church choir next season, and Verdi's *Aïda* and Bach's *Christmas Oratorio*, or Saint-Saëns' *Deluge*, with the Pittsburg Orchestra and the Festival Chorus. The performance of these works should in a measure help to keep up the standard of music in London. In the short time that Mr. Jordan has been in London, he has produced the following works: Cowen's *Rose Maiden*, Rossini's *Stabat Mater*, Haydn's *Creation*, Gounod's *Faust*, Mendelssohn's *Elijah*, Elgar's *Banner of St. George*, and many motets and smaller works for mixed or male chorus with orchestra, and it is his efforts that have made possible the appearances of the Pittsburg Orchestra, Theodore Thomas' Orchestra, Grenadier Guards Band, of London, Eng., and many distinguished artists.

GRAND RENEWAL OFFERS

THE MUSICIAN for one year and the *Art of Vocalization* by Eduardo Marzo, Mezzo Soprano, Books I, II, and III (II and III in press), $2.30.

THE MUSICIAN for one year and any volume of the Musicians Library in paper, $2.25; with any volume of the Musicians Library in cloth, $3.25.

THE MUSICIAN for one year and Elson's *Dictionary*, $1.75.

THE MUSICIAN for one year and *Intervals, Chords, and Ear Training* by Jean Parkman Brown, $1.75.

THE MUSICIAN for one year and *Ear Training for Teacher and Pupil* by C. A. Alchin, $1.75.

THE MUSICIAN for one year and *Harmonic Analysis* by Benjamin Cutter, $2.00.

THE MUSICIAN for one year and *Lessons in Music Form* by Dr. Percy Goetschius, $2.00.

THE MUSICIAN for one year and any number of Tapper's *Graded Course*, $1.75.

NOTICE WANTED.—*A YOUNG MAN*, with LARGE MUSICAL TALENT, with a sympathetic voice and considerable culture, high character, and winning personality, who desires to spend his life in making the musical department of a large City Church and all its extra Park and Theatre Services the means of winning people to Christ. Correspond with Pastor S. EDWARD YOUNG
2d Presbyterian Church, PITTSBURGH, PA.

COMMUNITY MUSIC IN WORCESTER, MASS.

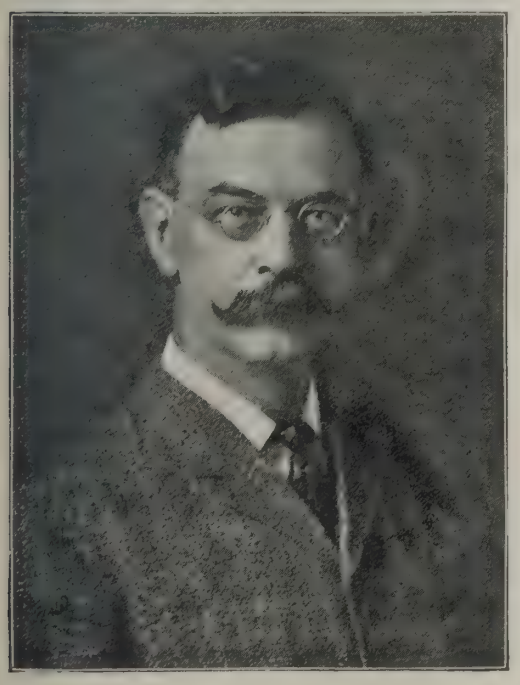
THOMAS TAPPER

I

The Worcester Festival becomes significant this year, as the Cincinnati Festival did, in the contribution to its chorus work by the children of the public schools.

The local music festival is a peculiar institution. For a week, more or less, the community is feasted until it is well-nigh plethoric, on the best that the land affords. Then follows quiescence. It must follow. And the query has been asked a thousand times: Is the festival a healthy stimulus in the music growth of the community?

There has been some doubt expressed in Syracuse, N. Y., of late, as to whether the festival, which has been a feature of the music life there, be continued. The public, it seems, is tired of the same attractions. It demands new music, new artists. The old has become too familiar. Analyzed, this means that the community has made its festival an object of critical comment on the part of its patrons. That the city goes to it to hear what the



CHARLES L. RICE
Director of Music, Worcester Schools

world offers instead of going to witness what distinct music contribution can be made by the community itself.

All festivals, however, have the same history in this regard. They try to reach, to interest and to collect the public on the basis of purveying the artists of the world. This is a distinctly necessary attraction, but it does not develop the community itself. A festival is locally important, and capable of growth only in so far as it actually produces music.

A festival is of value to a community not primarily for what it brings to town, but for what it brings out of the people of the town. The local chorus should create and maintain its own ideals. It should be strenuous in its accomplishments. It should work and develop its singers. It should offer the most talented of its members, opportunities for important work consistent with the talent. The chorus should be assisted by the great artist, on the basis of equal partnership. Each is necessary to the other. All this means that as they do it in Ober-Ammergau, they should do it elsewhere. There, the Passion Play draws the world to the little Bavarian village every ten years to witness what the simple people do of their own effort. They make their own peculiar offering, and they put the best of themselves in it, consecrating their own lives, and with solicitous care the lives of their own children, to this undertaking. They do not merely devote themselves to the decennial representation, but as a habit consistent in operation they study the works of the world's great dramatists, and perform this on Sundays. Consequently, these people are always in the spirit of the general work that has made them world-famous in a special representation -- a representation which they perform well, religiously, naturally, with the overpowering spirit that inspires them.

II

This digression means this: America will become musical as rapidly as men arise in its communities capable of developing the inherent musical capacity of the people. We need men everywhere who will bring the people together, who will work with them for their own development, aiming to make a music offering which shall typify this effort of the people. Mr. Wolle did it in Bethlehem. If my memory serves me rightly, the Bach performance occurred there only twice, and yet people flocked to that little Moravian village to witness the result of his effort.

I fear we place too little value on what we are capable of doing as a people. There is much latent capacity in every American community. Inspired by a leader, this can be brought to a remarkable state of proficiency.

Worcester is deservedly famous. Its festival chorus (with the changes incident to the long life of such a body) has drawn the attention of the outside world to its doings, has always sung well; but it seems to me that Worcester, in common with all places, must bring its own people more largely into the participation of its chorus, and this participation, in my mind, lies essentially in the hands of the school children. No better work can be done with a chorus than has been done with the Worcester chorus, but broader work may be done, the future may be insured, the community may be touched in more family centres by the development of this contribution of the school children which is being made by Mr. Rice to this year's festival.

And further, it seems to me that we miss the real value of our public school music in not consecrating it to efforts outside of the schoolroom. Really, when properly conducted, public school

Special Notice to Piano Teachers

THE SHEPARD SYSTEM provides an Element often lacking in Music Study,—the development of WILL, DETERMINATION, PERSONAL FORCE,—the most potent factor of success. Adapted, and may be added to any method; learned in a few lessons. This POWER TO INSPIRE THE BEST IN EVERY PUPIL is distinct from Musicianship, and a REVELATION TO ALL WHO STUDY IT. Taught personally or by mail. Summer course at Asbury Park, N. J. Booklet.

Also, HARMONY BY MAIL. Simple, Practical, Rapid. Specimen Lesson.
"Harmony Simplified," 10th Ed. "On approval," . . . . . Price, $1.00.

NOTTURNO A Musical Romance
By CARL G. SCHMIDT
President of the N. Y. S. Music Teachers' Association

PIANO TEACHERS *and* MUSICIANS

Any improvement, at once simple and effective, to aid you materially in the exercise of your art, ought to gain your attention and immediate consideration.

The Strauch Lost Motion Attachment, now accepted as the standard in its field, is simple and effective and will aid you materially.

Easily and perfectly it eliminates the lost motion in a piano action, caused by the use of the soft pedal, and is a material aid to any musician

So great has been the demand for this improvement that the

Strauch Bros. Piano Action

is now manufactured almost exclusively with the Lost Motion Attachment.

This device is the invention of the firm members, and is admitted to be the most important improvement made in Piano Actions since their inception.

Insist on having a Strauch Action and see that you get it.

(*The name is stamped on the rail.*)

Institute of Musical Art

of the City of New York

Frank Damrosch
Director

¶ Re-opens October 15th, 1906. Comprehensive, prescribed courses in all departments of music. Catalogue from

The Registrar, 54 Fifth Avenue
New York City

music in America produces very remarkable results, but in scrutinizing our communities, one is shocked to find that the development of this artistic spirit in the schoolroom ceases there because no one conserves it.

The younger generation is trained in the performance and appreciation of an art, which, after graduation from school, they lose more or less; the community does not offer them any particular opportunity to give it further exercise. It is apparent that this slipping away of developed

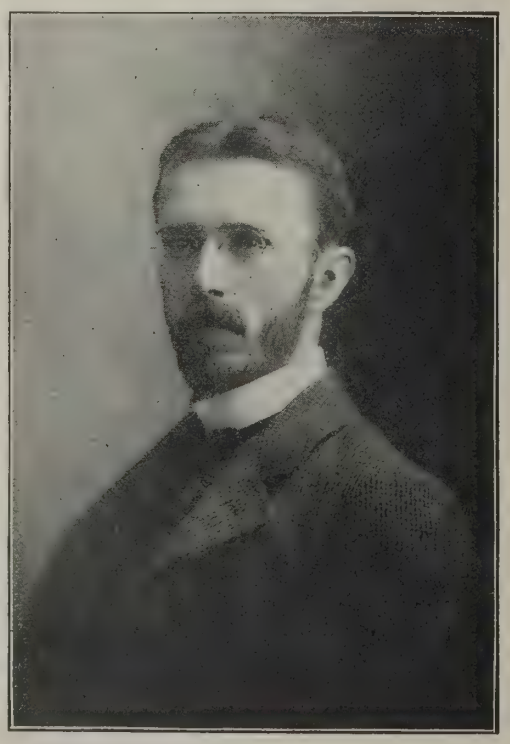
PAUL B. MORGAN
President

talent is a great loss. I trust that in the years to come such annual performances as this in Worcester may be made the opportunity for training and participation of the school children. In this wise, there would constantly be behind the Festival Chorus the coming generations of recruits, who, in accordance with individual fitness, would take their place in the adult chorus ranks.

The school children are always with us, and in them we find an assurance of the continuity of all human efforts. Why, then, should we not begin to consecrate them to artistic community effort in childhood? There is no community in America where this can be more logically and better done than in Worcester. Mr. Rice is a well-equipped director of music, his outlook upon the value of child music in the community is extensive, and in the work that he is doing as a municipal officer in the charge of art education with the children of Worcester, there lies the assurance of continued significant work.

III

Public school education has long been known as a preparation for life — a statement which we have all believed with non-inquiring belief until some one (I believe it was Mr. William T. Harris), pointed out the fact that public school education is already in itself a participation in life. A school child is as much a citizen with work to attend to, as a real daily business, as he ever will be. In nearly all activities, particularly centring around business life, men in the community are on the lookout for well-equipped young men and women who can pass from school and college into commercial life, developing in the broader field of public affairs the more or less elementary training of school years. Children thus trained are believed to have — and undoubtedly do have — a better mental equipment, a more logical and direct point of view toward affairs than the untrained have. I trust we shall have everywhere, as at present we have here and there, some one interested in the future of school children who will be

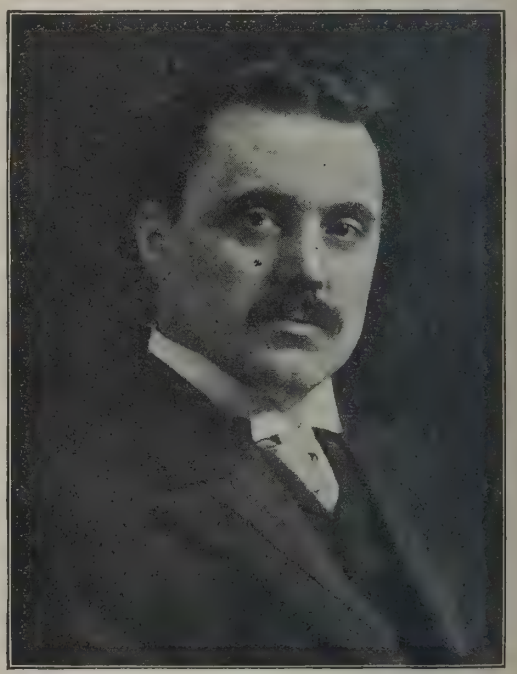


A. J. BASSETT
Chairman Program Committee

equally on the lookout for those who have passed through the schools and have gathered a certain amount of artistic training, who will keep that artistic training in hand during the years of school acquirement and see that none of it goes to waste in the years of after school life.

IV

These festival activities, specially worked up through the chorus, when thus led back to the broader community relationship, will inevitably interest more families and in interesting more families will enlist the attention of more citizens. It is logical to suppose that this training of music interest in a community will inevitably bring about self-expression through what the Germans call *Hausmusik*. If this logical trend be true, we have then arrived at the point in our development as a nation where actual musical progress will begin to take root. The history of older communities seems to show that national expression springs from deep and continued loyalty to life and art. The domestic music of Germany particularly, that great river of music which has flowed onward so broadly, deeply, and directly, finds its rise in the homes where devotion has fostered music with loving care.



J. VERNON BUTLER
Vice-President

In our public school music we have largely devoted ourselves to efforts in the classroom. It lies with our grade teachers, supervisors, principals, and directors of music to join the two links, school music and home music, with the firm link of a well-developed love for expression in music. The broader conception that we are now taking of school music, the valuable training children receive in the esthetics of music, and its technique, including not merely reading but self-expression in music, will inevitably lead us to find in it a more distinct and valuable national asset.

When we ask ourselves the purpose of school music, we can only reply that, to the child it is an outlet into a fair domain of human thought; a domain where he may wander to his infinite benefit and delight, that it ties him firmly, yet delicately, to his fellow-beings, that it offers him a beautiful mode of thought for self-expression; that it is in his hands another means which permits mutual expression of community thought, and which directly contributes to the wealth of the nation.

What Kreisler and Kubelik say:

Dear Mr. Reindahl:
The two violins made by you, I have tried and have found them very beautiful. I believe they are the best among new violins made.
The varnish, in particular, is superb. The tone and speaking quality are of a correspondingly high order.
FRITZ KREISLER.
Endorsed by Jan Kubelik

This is the reproduction of a special Violin ordered by the famous Emile Sauret.

The ADORATION

A CHRISTMAS CANTATA
For Soli, Chorus, and Organ
By GEORGE B. NEVIN

This, the first choral work of length by one of the best known and most popular writers of church music is, like all his work, tuneful and thoroughly singable. The voice parts lie well within average compass, each of the solo quartet has a solo, the organ part gives the singers support without going afield in search of independence, and the entire work may be readily performed by the average choir.

While the effectiveness of the work will naturally be somewhat in proportion to the size of the chorus, the cantata can be well rendered by a choir of eight voices. A quartet of chorus for men's voices and a number for women's voices require at least a double quartet choir.

The work opens and closes with the hymn *ADESTE FIDELES*, in which the congregation joins.

A devotional spirit characterizes the work which, with its brevity, well adapts it for use in connection with the church service. The time of performance is approximately twenty minutes.

CONTENTS

1. Chorus. "O come, all ye Faithful."
2. Baritone or Bass Solo and Chorus. "Behold, a Virgin shall Conceive."
3. Chorus for Women's Voices with Solo. "In Reverent Awe and Solemn State."
4. Chorus for Men's Voices. "Then sweeping through the Arch of Night."
5. Chorus. "Softly the Starlight."
6. Tenor and Soprano Solos. "And Lo, the Angel of the Lord."
7. Chorus. "Glory to God in the Highest."
8. Alto Solo and Quartet. "Hushed at length the Gracious Song."
9. Chorus. "Amen! Lord, We bless Thee."

PIANO TUNING PAYS

Our Graduates Earn $5 to $10 per Day the Year Round

THE TUNE-A-PHONE IN USE

We teach **Piano Tuning Action Regulating, Voicing, and Fine Repairing,** all in one, practical, easy and complete course, taken at your own home **by correspondence.** Under our PERSONAL ATTENTION system of instruction, and by use of our EXCLUSIVE invention, the **Tune-a-Phone,** ANY ONE WHO CAN HEAR can learn to tune. After two or three months of LEISURE HOUR STUDY, you can **begin to earn money** by tuning, regulating, and repairing pianos. When you have finished our course, we will grant you a **Diploma** accepted everywhere as PROOF OF SKILL. You will then be in possession of a business that will make you **independent and your own master for life**

We supply FREE a TUNE-A-PHONE, also a working model of a full-size, modern upright **Piano Action,** also the necessary **tools** for each pupil. We fit our students to command splendid profits in the pleasantest of professions.

THE ACTION MODEL

"My best day's earning has been to tune four pianos at $3 each."—(Rev.) C. D. Nickelsen, Hood River, Oregon.

"I made $36 last week, and $212 the last two months, tuning and regulating pianos.'—Joseph Gribler, Astoria, Oregon.

THE DUNNING SYSTEM
of IMPROVED MUSIC STUDY *for* BEGINNERS

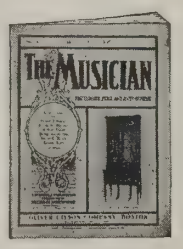
It matters not as to which musical system was originated first, but rather which is the best. The Dunning System is the only one endorsed by the world-renowned masters of music in both America and Europe, and its superiority is acknowledged by all who know of the marvelous results shown by the teachers now using it.

NORMAL TRAINING COURSE FOR TEACHERS, in BUFFALO, N.Y., beginning JULY 5, 1906
NORMAL TRAINING COURSE FOR TEACHERS, in PORTLAND, ORE., beginning SEPT. 9, 1906

Send for booklet with written endorsement of Leschetizky, Scharwenka, de Pachman, Busoni, and others. Address,

Mrs. CARRIE L. DUNNING, 225 Highland Ave., Buffalo, N. Y.

This system is not taught by correspondence, as it is a musical education in itself.



BACK NUMBERS

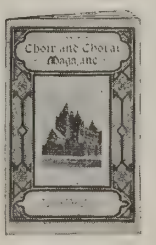
A limited number of complete sets for last year are still on hand.

The Musician for 1905 contains over 500 articles, essays, and sketches on all subjects pertaining to music; also 164 pages of vocal and instrumental music. Price, while they last, $1.50.

The Choir and Choral Magazine for 1905 contains nearly 140 practical articles of interest to choir leaders, choir singers, and organists; also 152 pages of church music. Price, while they last, 50 cents.

These prices include the cost of transportation. With but few exceptions there are no single copies available of either magazine.

OLIVER DITSON COMPANY, 150 Tremont St., Boston



INSTRUCTION BOOKS

The following works have made a place for themselves. Their success entitles them to further urging on the part of the publishers, in order to bring them to the attention of those who may not know them.

The Very First Lessons at the Piano

By MRS. CROSBY ADAMS . . . Price, 75 cents

The title gives the stage of work for which the book is intended. Unquestionably the interest which the contents of the book constantly awakens in the child is the secret of the great success the book has enjoyed. If you are doing work with children and are unacquainted with this book you are certainly missing one of the best things for beginners in piano playing.

Piano Technic for Children

By JULIA LOIS CARUTHERS . . Price, $2.00

This work deals solely with the technic of piano playing, and presents the subject in a manner at once novel and unusually attractive. The seriousness of the system is none the less marked because of the "play" features on which the work is based, in fact, seriousness is its vital claim, and the attractiveness of presentation dispels the drudgery. It is a splendid book to use for young children.

Hand-book of 101 Exercises for the Voice

Compiled by J. H. GARNER . . . . . Price, $1.00

Teachers of singing will recognize in this collection many familiar and favorite exercises. They are chosen from the great and well-known masters. The revised edition contains additional exercises, making a larger total than the title calls for. A number of pages of blank music paper are bound into the book, thereby giving each teacher the opportunity to add exercises of his own. A useful, practical book.

The Elements of English Verse, correlated to Music

By ALICE C. D. RILEY . . . . Price, $1.50

This is a new work entirely unique in its contents, and provides most excellent instruction on a topic which is certain to engross the attention of educators. It is receiving most enthusiastic recommendation from those who have examined it. Teachers of music in the schoolroom, and children in general, know what Mrs. Riley's work stands for. She has much to tell them in this new book.

A NEW BOOK ON SINGING

The Art of the Singer

Practical Hints about Vocal Technics and Style

By W. J. HENDERSON

Author of "What is Good Music," "The Orchestra and Orchestral Music," etc.

12mo, $1.25 net Postage Extra

¶ The author has made special and searching investigations into the records of the sixteenth, seventeenth, and eighteenth centuries; has made many experiments with voices; has observed the methods of many teachers; has heard and studied the famous singers of the past quarter-century; and has obtained from some of them valuable instruction.

¶ He is specially indebted to Mesdames Nordica and Sembrich for important information and for practical demonstrations the greatest by M. Jean De Reszke.

¶ The volume will interest the teacher, student, and lover of singing, as it is the matured result of twenty-five years of careful study, by a music-critic of the highest reputation.

Charles Scribner's Sons

153-157 FIFTH AVENUE, NEW YORK

THE STORY OF

Music and Musicians

By LUCY C. LILLIE

THIS VOLUME seeks to interest young students in music in the technique of their art and in the associations around which great masters have worked. It sketches the history of music in brief outline and treats of the personal and professional life of the great figures in the musical world during the past. An admirable introduction to a study of music in detail, and a book that will prove an inspiration to every student.

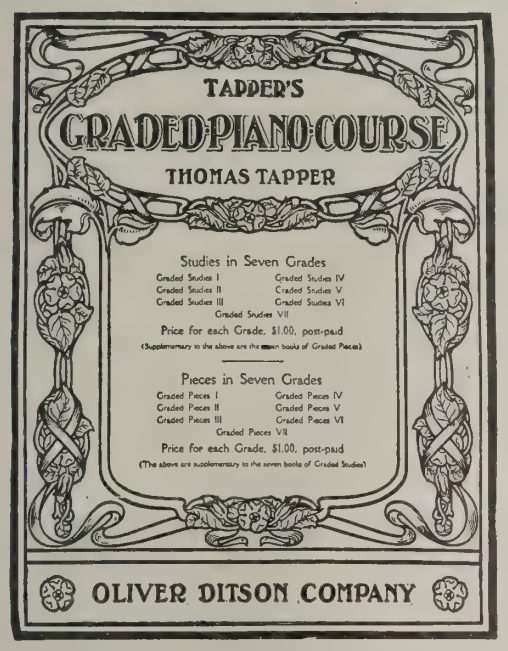
TAPPER'S GRADED COURSE



GRADED STUDIES
SEVEN BOOKS, $1.00 Each

GRADED PIECES
SEVEN BOOKS, $1.00 Each

MANUALS
For STUDENT and TEACHER

THREE BOOKS, $1.00 Each

THE remarkable success which has attended this course in the short time since the first grades were published attests to its value as indispensable teaching material. The course is significant in many essential particulars, among them the following:—

1. The material is musical and pleasing.
2. The grading is natural.
3. The Text for teacher and student is ample, clear, and in proper sequence.
4. It is the only Piano Course that instructs in ALL essential lines of music thought: Piano, Theory, Dictation, Music Form, Melodic and Harmonic Analysis, etc.
5. The music is not hackneyed and is selected from an unusual variety of composers.
6. The Editorial contribution to the books is equally significant, and includes such names as:—

Albert Ross Parsons — **Moritz Moszkowski** — **Alvah Glover Salmon** — **Isidor Philipp**
Carlo Buonamici — **Xaver Scharwenka** — **Dr. Percy Goetschius** — **John Orth**
Michael Esposito — **E. R. Kroeger** — **Jaroslav de Zielinski** — **Mrs. Thomas Tapper**
Felix Fox — **The Editor and Many Others** — **Miss Anna Lockwood**

7. The Elementary Grades are a Collection of Pieces and Studies indispensable to every student. The books of each grade provide a liberal music education to the point to which the grade progresses.
8. The advanced Grades do not progress beyond the boundary of attainment possible to the student of talent who has received a thorough fundamental training.

ESTABLISHED 1850
BY MOSES A. DOW.

The WAVERLEY

claims the proud distinction of being the oldest and best-known story magazine published in America. Time was when ***The Waverley*** was in every home and read by young and old alike. *You* remember *those* stories, and such stories they were—so intensely interesting, so exciting ! ! Well, ***The Waverley*** is just the same to-day—the same size, the same shape, the same captivating stories, *only better and more modern;* but all stories just the same—pure, wholesome, entertaining stories of *love*, *romance*, and *adventure*, and *all complete in each number.*

A Page of Poetry

Then, too, there has been added a poetry page—poems of the long ago, poetic gems and sonnets perhaps almost forgotten, but which you want to read again.

The Story Teller

The story teller page is another new feature: real short, crispy little stories of everyday life, but how entertaining ! !

Woman's World

The "Woman's World" department, not the humdrum sort, but facts and fancies worth knowing, helpful hints that really help, things worth doing and how to do them !

You liked The Waverley years ago; You'll like it better now

Do you know that there is *no other* magazine *just like* ***The Waverley***, and that it is ***only $1.00 a year ?***

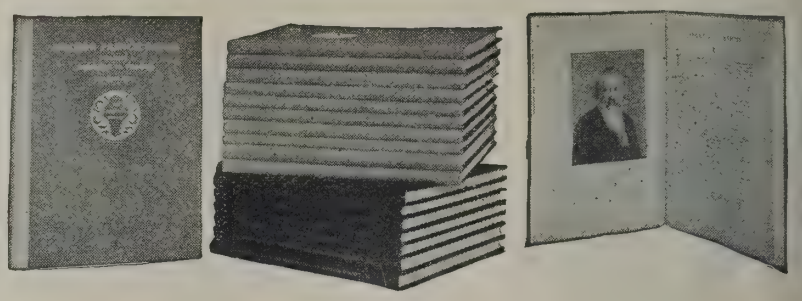
Special Subscription Offer

On receipt of $1.00 we will send you **THE WAVERLEY** ***each month from now on,*** **until January, 1908.**

ADDRESS

WAVERLEY PUBLISHING COMPANY

BOSTON, MASS.



The Musicians Library

Special Features

Each volume is carefully edited by an authority who is at the same time an enthusiast on the subject or composer represented.

Each volume is complete in itself and is sold by itself.

Each volume contains the best obtainable portrait of the composer or composers whose works are contained therein.

Each volume is enriched by an elaborate critical introduction, possessing genuine literary quality.

With the music is given, as far as known, the date of the composition, and the contents, when possible, are arranged chronologically.

The various song volumes are issued in two editions,—one for high voice and one for low voice,—thus bringing the best song literature within the reach of all. Whenever possible the original key is named.

In the songs by foreign composers the original texts are in all cases given. Great pains have been taken to secure faithful translations that fit the music and have literary worth.

The music pages are uniformly of full folio size, and are printed on specially made paper.

The volumes are artistically bound in paper with cloth back, and also in full cloth, gilt. These cloth-bound volumes are eminently desirable for library use and as gifts.

That the typography, engraving, accuracy, and artistic *ensemble* of the volumes be of the highest excellence, neither care nor expense has been spared.

No lover of music should be without these matchless volumes.

Song Volumes

Johannes Brahms—Forty Songs, *Edited by James Huneker*

FLUTES BŒHM SYSTEM, Concert, Ordinary, Military FLUTES

For many years it has been practically impossible to secure from any source reliable FLUTES of all qualities. The DITSON HOUSES have made it easy, however, to overcome the difficulties found heretofore when seeking perfect FLUTES.

Commencing with the simplest forms of one-keyed FLUTES, and ending with the costly mechanism used in the manufacture of the Bœhm system FLUTES, equal care with the selection of materials and workmanship is displayed in bringing together the various numbers and styles described here.

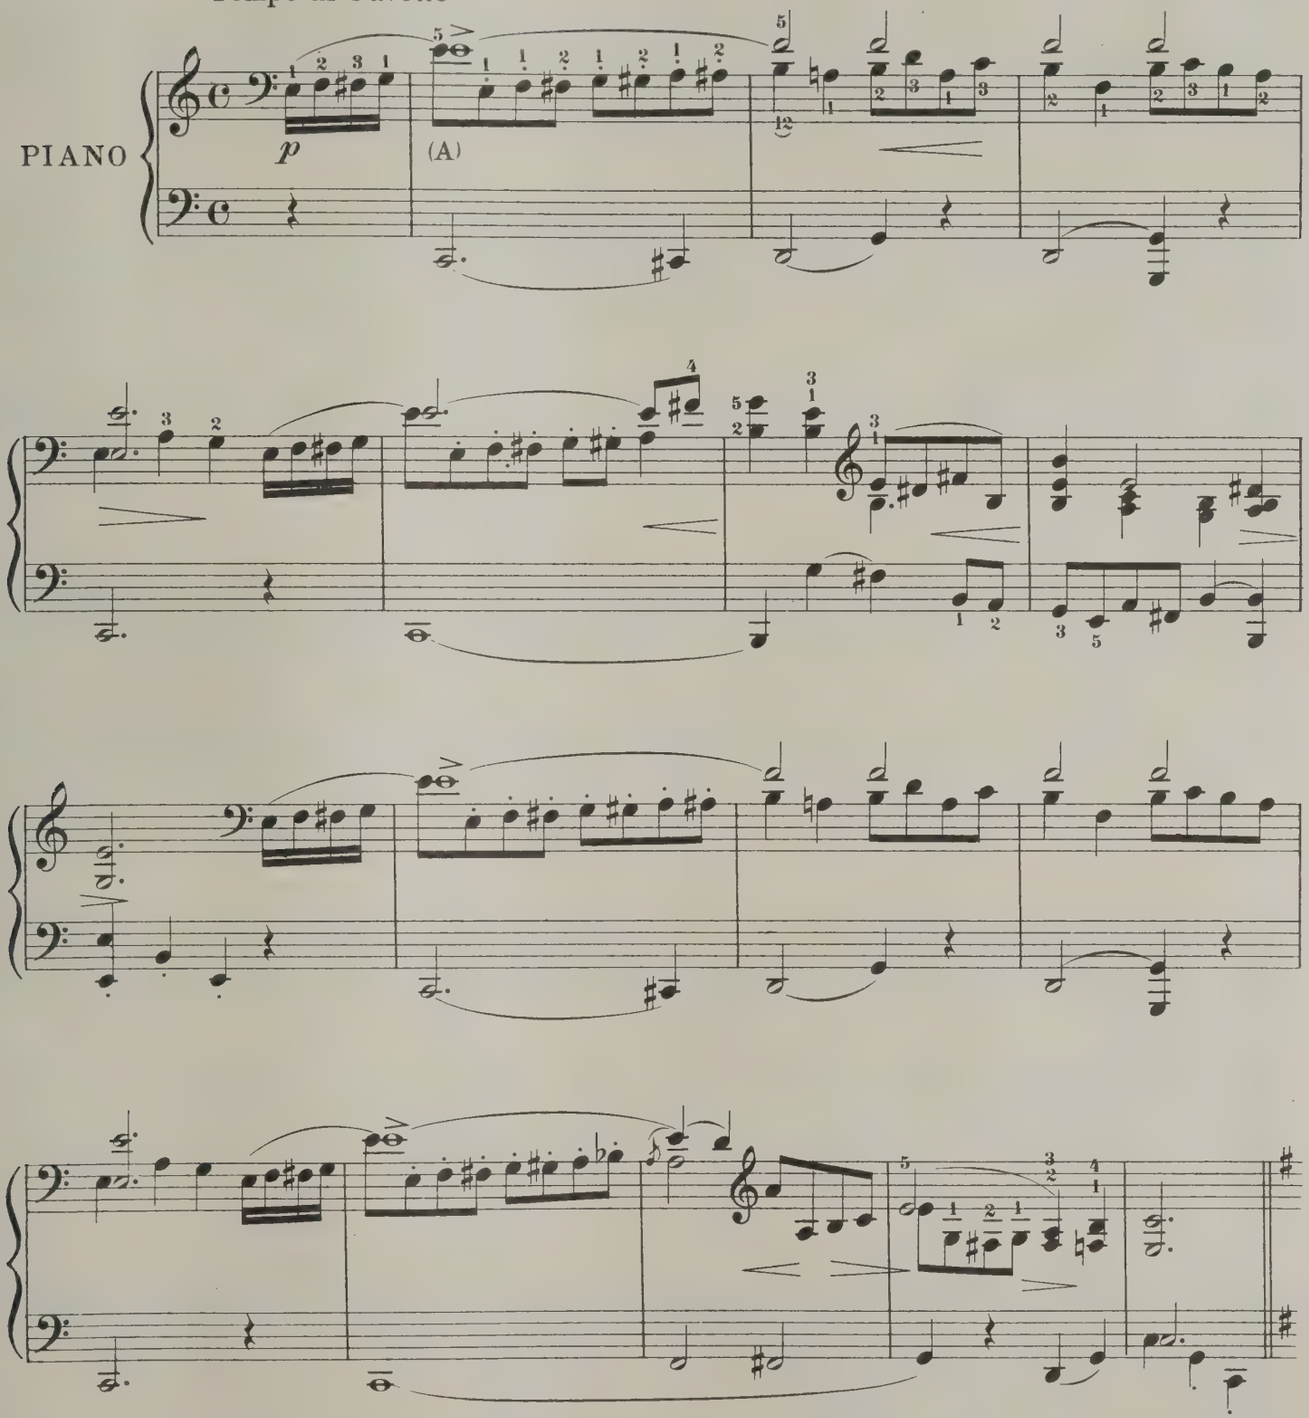
WITH DAINTY CHARM

Tempo di Gavotte

W. F. SUDDS, Op.295



To produce the intended effect, at (A) and similar recurrences, the sustained upper tone (E) must be made to "ring out" with full, rich tone, while the underlying chromatic melody should be a subdued, dainty staccato. It is also important that the damper pedal be used precisely as indicated.

THE SPARRELL PRINT, BOSTON

The L. B. Bookcase
A New Idea

A solid, complete bookcase of five adjustable shelves, built on exquisite lines, and showing no signs of its expansion construction. Yet by the simplest operation, additional units may be attached at will, the result being an equally solid and complete case without the slightest indication of being made up of separate units.

Entirely different from the hideous box unit.

Made in oak and mahogany. Plain or leaded glass doors, or without doors.

The Musician

A MONTHLY PUBLICATION
THOMAS TAPPER, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

SUBSCRIPTION PRICE

SINGLE COPY.....$ .15
PER YEAR.....1.50

Free of Postage in the United States, Canada, and Mexico.
Foreign Postage, per Year, 72 Cents.

The entire contents of this Magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured*, money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

DISCONTINUANCE.—IF YOU WISH THE MUSICIAN STOPPED, AN EXPLICIT NOTICE MUST BE SENT US BY LETTER; OTHERWISE IT WILL BE CONTINUED. ALL ARREARAGES MUST BE PAID.

Subscriptions to this publication are not discontinued at expiration unless so ordered by the subscriber. The courts invariably hold a subscriber responsible to the publisher for the subscription price of all papers received until the paper is paid for in full up to date and ordered discontinued.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor, MR. THOMAS TAPPER.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in THE MUSICIAN, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 18th of the month.

All REMITTANCES should be addressed and made payable to

OLIVER DITSON COMPANY
Publishers of THE MUSICIAN,
Ditson Building, 150 Tremont Street
BOSTON, MASS.

PUBLISHERS' NOTES

TAPPER'S GRADED PIANO COURSE — Louis Arthur Russell, in a recent number of the *Musical Leader and Concert Goer*, says: —

"I have already called attention to the excellent set of Piano Books, recently issued by the Oliver Ditson Company, Tapper's *Graded Piano Course*, compiled by Thomas Tapper.

"Mr. Tapper has put together an unusual lot of material, graded with great care, and introducing music quite removed from the ordinary. The annotations are in his usual terse style, clear and helpful to the teacher looking for good material for the student's use; these books are of great value."

If you have not already seen these books, do not hesitate to send for them.

OPERA SINGERS, GUSTAVE KOBBE — On front cover will be found an advertisement of the Revised Edition of this handsome book.

We recommend it as a suitable and pleasing Holiday Gift. It will be sent postage paid to any address for $1.50.

GET THE HABIT — of reading and studying books on musical subjects. Now is the time to lay the foundation of a Library of Music. But you will say this costs money. True, but a systematic saving week by week, with a definite object in mind, will accomplish wonders. You don't have to buy everything at once. Make a plan and stick to it, and when you have enough saved make a purchase of some choice book or edition, and while you are reading or studying it, continue your saving.

Begin now and save for a Library of Music, if only 25 cents per week. A good book to begin with is *Elson's Dictionary*, price $1.00, and then *The Music Students Library* taken in order of your requirements.

We give titles and prices below, but descriptive circular may be had on application.

Intervals, Chords, and Ear Training, by Jean Parkman Brown. Price, post-paid, $1.00.

Ear Training for Teacher and Pupil, by C. A. Alchin. Price, post-paid, $1.00.

Harmonic Analysis, by Benjamin Cutter. Price, post-paid, $1.25.

How to Study Kreutzer, by Benjamin Cutter. Price, post-paid, 75 cents.

Harmony by Sir John Stainer. Price, post-paid, 75 cents.

Lessons in Music Form, by Dr. Percy Goetschius. Price, post-paid, $1.25.

Burrowes' Piano Primer, edited and revised by Frederick Field Bullard. Price, post-paid, 50 cents.

Harmony Simplified, by Francis L. York, M. A. Price, post-paid, $1.00.

English Diction, by Louis Arthur Russell. Price, post-paid, $1.00.

The Training of Boys' Voices, by Claude Ellsworth Johnson. Price, post-paid, 75 cents.

These books are bound in neat, serviceable cloth. Copies of any will be sent for examination.

ENTERTAINMENTS FOR CHILDREN — These little entertainments are becoming more and more popular, and the most popular of all are the *Kinder* (Children's) *Symphonies*. We have the Symphonies, and also the instruments.

Here is a great chance to please the little ones, and you will find yourself entertained and benefited at the same time.

Catalogs of music and toy instruments free on request.

THE HALF DOLLAR CHORAL SERIES — This series of octavo volumes of Choral Music has been planned to give at a popular price a varied collection of attractive music. The contents of each volume have been chosen with care from music of proven acceptability. In no other form can so much desirable music be obtained at the price, nor can the contents be duplicated. The music is in all cases printed from engraved plates and in binding and typography the volumes surpass all other low-priced collections. Conductors, choirmasters, and organists will find these volumes of great practical value from both the musical and economic standpoint.

Catalogs on request, or copies may be had of your own music store.

ART OF VOCALIZATION EDUARDO MARZO — See Publishers' Notes in October number for description. The three books for alto are now published, and the advance offer is withdrawn.

We have received many enthusiastic testimonials for the Course for Soprano. In the Course for Alto, just published, the same high standard has been maintained.

DITSON EDITION — It gives us pleasure to again quote from Louis Arthur Russell: —

"The Ditson Edition is introducing a large number of well-known popular Studies, in a convenient form, with pedagogic editorial notes. The series includes many important works."

A complete catalog will be sent free on request. The Ditson Edition is in every way up to date, and can be obtained of all the leading dealers in the country. As there are numerous editions of reprint works, we must ask you to insist on the Ditson Edition. Do not be put off with any other.

CANTATAS AND OPERETTAS — Before making up your list of musical works for use the coming season, be sure and send for our Descriptive Circular "P," which includes a list of Sacred Choral Works, Secular Choral Works, Operettas and Scenic Cantatas, Operettas and Cantatas for Special Seasons, and a list of all works for which we can furnish orchestral accompaniments on rental.

This book of fifty-two pages will be sent free on request.

We call attention to another page in this number for a complete list of our catalogs. We recommend that you send for these as needed, and keep them for reference. You will find them invaluable.

If you will send us your name, and let us know the kind of music in which you are interested; the size of your class and the number of your pupils, etc., we will keep you posted as to our new publications.

MUSIC ON AMERICAN BATTLESHIPS — The flagships of the United States navy are each provided with a band and orchestra. The bands are not quite as large as they should be for the best results, but the orchestras of the same number of pieces are much more effective. The programs are far better in quality than those of the average landsmen's bands and seldom contain trash of the present popular style.

The following is a program on the U. S. Flagship "Ohio" at Yokohama, Japan, on May 3, 1906.

1. Wedding March.....*Mendelssohn*
2. Overture, Daughter of the Regiment.....*Donizetti*
3. Fantasia, from Faust.....*Gounod*
4. Polka, Why Not (Concert Polka).....*Gruenwald*
5. Turkish Patrol.....*Michaelis*

Three of the above are publications of the Oliver Ditson Company, as also are the following numbers played during May and April at Yokohama on the same vessel, viz.: —

The Hunting of the Snark, Descriptive....*T. H. Rollinson*
Overture, King of the Dwarfs.....*Adam*
Suite de Ballet, Antony and Cleopatra.....*Gruenwald*
Overture, Hunting for Luck.....*Suppe*
Grand International Fantasia.....*T. H. Rollinson*
Patriotic Airs of Two Continents
Selection from Attila.....*Verdi*
A Dream, Solo for Cornet.....*J. C. Bartlett*

In programs containing thirty-six numbers in all there were only four of the alleged "indian" intermezzo variety, and none of the cheap vaudeville class. Thirteen were from the Ditson publications.

The following letter was received from the bandmaster, Mr. C. G. Stark, who sent the programs.

Kobe, Japan, June 5, 1906.

MESSRS. OLIVER DITSON COMPANY,
Boston, Mass., U. S. A.

Gentlemen:— I want to say that your *Military Band Journal* is the most elaborate, the best arrangement, and printed on the best paper that I have ever seen, and you will please send me complete catalog of your publications to date.

Very truly yours,
C. G. STARK, *Bandmaster.*
United States Asiatic Fleet. Office of the Commander-in-Chief.

Three recent publications of the Oliver Ditson Company have received the indorsement of singers in three widely separated cities.

Mr. Frank Parker, late of the Whitney Opera Company writes from Detroit, "Your drinking song, *The Immortal Cup*, by H. Clough-Leighter, is a great song."

Mr. Fred Kendal of the Apollo Quartet, Boston, says, "I shall place *The Immortal Cup*, by H. Clough-Leighter, and *A Girl in Every Port*, by N. Clifford Page, on all my programs this season." And Llewell Evans writes from London, England, "Your three songs, *The Immortal Cup*, *A Girl in Every Port*, and *The Ride*, are fine songs, and I shall take pleasure in singing them as often as possible." *The Ride* is by Harry Rowe Shelley.

One of our prominent piano teachers has given a standing order for a copy of every work for the piano that we may publish in future, that is offered in these columns at Advance Rates for Introduction. He explained that he is a very busy man and does not always have time to read these columns carefully, and as he does not want to miss any new publication, he thinks the safest way is to give a standing order. We recommend this idea to other busy teachers.

Will enter your order for our new books and send as soon as published, at introductory prices. The order may be for books for piano, for voice, violin, literature, or any other kind. Please specify your requirements in making up order.

LITTLE PISCHNA BERNARD WOLFF is promised this month. We call attention to the Publishers' Page in the September and October numbers, for full description.

The advance offer price of 40 cents, including postage if cash accompanies order, will be continued until December 1.

STUDIES FOR THE DEVELOPMENT OF RHYTHM AND EXPRESSION, CARL PREYER We have received many orders for these Studies, which will be published in two books, each containing eight Studies, Nos. 110 and 111 of the Ditson Edition, and will be issued some time during the month. Price of each book 75 cents, but until December 1 we offer copies for 30 cents and the two for 50 cents. These prices include the cost of postage if cash accompanies order.

FROM BACH TO CHOPIN compiled and edited by Clayton Johns, consists of difficult sections and phrases from the masterpieces of pianoforte music. These sections and phrases lend themselves readily to an indefinite number of repetitions without interrupting the flow of the movements from which they are taken. The chief claim of the work is that while possessing all the advantages of purely technical exercises the student is constantly accumulating material which may be applied throughout a course of musical training when the quoted works are taken up as a whole for study. Besides the exercises chosen for their special difficulties, a number have been added for the sake of their general usefulness in finger development. The exercises may be practiced in any tempo, thus being available for students of moderate attainments as well as for those more advanced technically.

This work will be published sometime during November. It will be No. 109 of the Ditson Edition; price $1.50.

Until December 1 copies are offered for 60 cents, which includes postage if cash accompanies order.

This book was advertised in the September number by mistake as *From Bach to Beethoven.*

MENDELSSOHN'S SONGS WITHOUT WORDS A new and altogether superior edition of Mendelssohn's *Songs without Words* will be shortly issued as No. 98 of the Ditson Edition. The volume has been edited by Dr. Percy Goetschius.

Not only has every detail of notation, fingering, and phrasing been carefully scrutinized, but the *formal structure* of each number has been carefully indicated. This publication is distinguished from all others as the *Analytic Edition.* No modern composer has shown a more sensitive feeling for form, proportion, and balance of design than Mendelssohn; therefore the conscientious study of the structure of the *Songs without Words* is in itself an education in the fundamentals of music form.

The names given by Stephen Heller, which have become identified with these songs in the popular mind, will be found in this edition. A valuable feature of the book is the critical introduction by Daniel Gregory Mason.

These features, combined with engraving, printing, and binding of the highest class, make this the very best edition of this popular classic published.

The price of the book will be $1.00, but in advance of publication we offer copies for 40 cents, which includes the cost of transportation if cash accompanies order.

This offer expires December 1.

THE MUSIC IN THIS NUMBER

Beam from Yonder Star. Fred. Field Bullard.

A romantic song for baritone or mezzo soprano. The singer will notice several little changes in rhythm, written to portray the mood of the text more effectively. There are a few intervals that need practice for correct intonation, otherwise technical difficulties are not many. The singer should study this song carefully for its sentiment, the portrayal of which is all important. The accompaniment should be played mostly with a singing legato, and to this end the composer has marked *with both pedals.* In light passages the right-hand pedal should be pressed only about halfway down, which will be amply sufficient for the sustaining effect.

When the Birds go North Again. Richard Henry Warren.

The text, though brief, suggests much of the reflective spirit as well as one of hopeful anticipation. The singer should study the moods carefully. First the minor, then in the tonic major, a little faster with more animation. Here are the two moods, eloquently pictured by the music. The song is well adapted for medium voice, available for a group, or as an "extra." The accompaniment is often independent in character, and while always secondary to the voice, should be played distinctly, firmly, yet with a sustained singing tone even in accentuated chords.

Ere the Moon begins to Rise. Charles Fonteyn Manney.

Like the preceding, this song is brief but highly expressive of a romantic text. It is in easy compass of an octave for medium voice. The singer will observe that it is a valuable vocal study in expression as well as for a quiet, sustained quality of tone. Notice the last part of the song, especially. The accompanist can produce some fine effects with the opening measures, by using both pedals together, using the right damper strictly as indicated. There are hints at a secondary melody, all through, which should be brought out distinctly, yet lightly. In fact the entire accompaniment should be studied with extreme care for beauty of tone and clearness of detail, for these are very important in this instance.

My World. Henry Holden Huss.

Here is another brief song, but like the two preceding, of a quiet, refined sentiment. Some of the hints previously expressed are applicable to this song, which is not technically difficult and in easy range excepting two measures on the last page. The accompaniment should be played in the organ style, very sustained, excepting in the climax, when the voice has the high note. Here it should be well marked with the moving notes properly accented. The last measures *pp* both pedals, make a striking contrast.

Gifts. Roy Lamont Smith.

An effective, short example of the romantic love song, for high voice. The first mood of the piece is expressed by the major key and the second by B minor, relative of the dominant of the first key. The singer will notice some augmented intervals, and in the second minor period there are small notes, *ad libitum.* This song is excellent for technical study, and the brilliant climax at the end should be brought out with brilliant tone and with much animation. The accompaniment requires a pianist who is a good reader, for there are many accidentals and brief changes in tonality. Where the accompaniment is independent of the voice, there is often a secondary melody that should be clearly expressed. This song will repay careful study, and is most effective for recital purposes.

Deepening Shadows. Rubin Goldmark.

This is the last of a group of six character pieces for piano, fifth grade. The composer is a nephew of Karl Goldmark of Vienna, and inherits much of the romantic spirit of his distinguished relative. The mood is reflective with a tinge of melancholy, beginning slow, in quiet manner. Notice the brief change in key on the first page, a striking episode. The piece is only moderately difficult for its grade, but the pianist to do it justice must be one of considerable temperament, and who is accustomed to work out the meaning of pieces for himself. In this instance there is much food for thought, and results will amply repay conscientious study.

La Caressante. Anton Strelezki.

A brilliant, effective *salon* number for third-grade students. The characteristic group of sixteenths on the weak beats of the measure will be noticed. With some variations this figure is maintained throughout. There are technical difficulties more or less in evidence, much independence between the hands is essential, and the student should observe carefully the many marks of phrasing and accent. When the left hand crosses over the right, it should be done easily without effort or display. The proper use of the pedal is also very essential.

Serenade Mexicaine. Bruno Oscar Klein.

A graceful, rhythmic dance, with many interesting little characteristics. The principal points to be observed are crisp, rhythmic effects, a light elastic touch, passages in thirds for right hand, contrary motion between the hands, and a general freedom in style and manner. Notice also effects in phrasing.

The Chase. C. E. Van Laer.

This piece is strongly rhythmic, suggesting the tarantelle. On the first page the left-hand melody should be well marked, yet legato, and also where the theme is repeated. The time is rather quick, and the chord passages should be played with a firm, light wrist motion, observing carefully all accents. This will be found to be pleasingly melodic and one that will interest younger students, for its joyous, breezy character is unmistakable.

Minuet. Max Zach.

Mr. Zach, one of the most gifted members of the Boston Symphony Orchestra, has in this little minuet written an exquisite musical picture, easy for young piano students, but invariably artistic and refined. There is a principal theme with trio. Both hands have mostly single notes, varied with occasional chords in easy compass. Valuable for rhythm, light staccato, and independence between the hands.

Russian Dance. H. Engelmann.

A brilliant dance rhythm, vigorous yet dignified in manner, for students of the fourth grade. Notice on first page the full chords for right hand, with octaves moving in contrary motion for left hand. This idea is maintained until the third brace on page three. Then follows a second period to be given very smoothly and quietly, in striking contrast to what precedes. The brilliant character again appears for the final eight measures. This will prove an effective technical study, developing breadth of tone and brilliancy of style; essential in pieces of this character.

GRAND RENEWAL OFFERS FOR NOVEMBER

THE MUSICIAN and any number of Tapper's *Graded Course*, Studies and Pieces, $1.75.

THE MUSICIAN and Mason's *Pianoforte Technics*, Nos. 1 or 2, $1.75.

The same in cloth, complete, $2.75.

THE MUSICIAN and Elson's *Dictionary*, $1.75.

THE MUSICIAN and any volume of the Musicians Library, paper, $2.25.

THE MUSICIAN (for two years). This can either be sent to your own address for two years, or your own and another address for one year, $2.50.

We will, on receipt of $4.50 from any subscriber, send THE MUSICIAN to four addresses for one year, their own among the number.

TESTIMONIAL

"I am very anxious to see the Teachers' Manual to your Graded Course, of which I have used last season quite a number, and which is so perfect in its conception of the much-abused Graded Course idea, that I most respectfully add my admiration, as an ambitious teacher, to the many testimonials you must have received."

EDWARD MAYERHOFER.

Sept. 30, 1906.

WASHBURN

MANDOLINS, GUITARS, and BANJOS

Generally Accredited Among Artists and Critical Music Lovers as the One Perfect Line

The Washburn has long maintained this coveted position. Its gradual development to its present perfection has been a labor of love with us. A large staff of the most skilled workmen in the world has spared no pains or expense of costly experimenting to perfect the Washburn.

We are satisfied that the 1906 models cannot be improved upon in any particular.

Players of Mandolins, Guitars, and Banjos fail to do their talent full justice unless they use the Washburn. No other instrument has the same possibility of musical expression.

We gladly send Washburns on approval, to be returned if not entirely satisfactory.

Sold for cash or instalments.

Prices: $15, $20, $25, $35, $50, and $75

Washburn Guitars may be had in Standard, Concert, Grand Concert, and Auditorium sizes.

Write for a **FREE** copy of Lyon & Healy's Musical Handbook, fully describing the Washburn; also thousands of other articles of interest to musicians. Address,

LYON & HEALY, 29 Adams St., CHICAGO

HOME SONGS

INSTANT SUCCESS. 5,000 SOLD BEFORE PUBLICATION

The songs are arranged for mixed voices, throughout, and may be sung with or without piano as desired Included in the long list are ballads of love and adventure, patriotic songs of our own country, many of our best-known hymns, and a goodly representation of rounds, a form of music that furnished healthy amusement in the past and deserves more attention in the present.

The book contains 120 pages; bound in heavy paper, cloth back, price 50 cents. Post-paid.

Educational Value

THE MOST VALUABLE TEXT-BOOK OF MUSICAL HISTORY IN THE ENGLISH LANGUAGE

HISTORY OF MUSIC

By W. J. BALTZELL

PRICE, $1.75

A Text-book for Classes A Manual for Private Reading
For Colleges, Conservatories, and Clubs

Comprehensive—Concise—Practical

A History of Music brought up to date, arranged in lessons of suitable length so that two can easily be prepared every week, with helps for teachers and students, questions on the lessons, review outlines, topics for essays, tables, and complete indexes, including pronunciation of names. Copiously illustrated. Each lesson has a number of paragraph heads, giving an outline for study and review.

SELECTED "CZERNY" STUDIES

A GRADED COURSE

Edited, Annotated, Explained, Fingered by
EMIL LIEBLING

In Three Books Grades II to VI
90 CENTS EACH

A new and valuable addition to the educational literature of the pianoforte. A graded course in Czerny, with copious annotations and explanatory text of the most careful and exact character, both as regards fingering and phrasing and technical and musical interpretation. This work represents a careful sifting and selection from the entire works of Czerny. The editorial work has been done by one of America's eminent and most successful teachers. Volume I begins at about Grade II and Volume III ends at about Grade VI. The grading is very close throughout. No greater technician than Czerny ever lived, and this course offers a valuable and condensed compendium of his very best work. The various studies are in all styles and cover every department of piano technic.

STANDARD COMPOSITIONS

For the Piano

Vol. I—First Grade.....Price, 50 cents

Graded and Compiled by
W. S. B. MATHEWS

To be used in connection with Mathews' Standard Graded Course of Studies and all other graded courses.

One of a new series in which there will be at least six volumes at a uniform price. There are thirty-one pieces in the first volume. All the pieces have been thoroughly tested in actual teaching and have genuine educational qualities.

HANDEL ALBUM

A collection of favorite pieces for the Piano, with Portrait and Biographical Sketch

Selected and Edited by
THEO. PRESSER

Price, 60 cents

Handel, in our opinion, has never been fully appreciated by the American teaching public. The overwhelming genius of Bach has rather thrown Handel in the shade, yet for technical, and at the same time interesting work, Handel is to be preferred. This volume can be taken instead of either Bach's "Inventions" or "Little Preludes," and the pupil will derive just as much benefit and at the same time experience more pleasure.

IN PRESS

Harmony and Musical Composition. W. T. Giffe.
Easy Sonatinas for the Piano.
Violin Method. Geo. Lehman.
Practical Sight Singing Method. Fred Reddall.
Exercises in the Synthetic Method of Vocalization. F. W. Root.
Standard Concert Etudes for the Piano.
Piano Tuning, Regulating, and Repairing. Fischer.
Easy Dance Album for Piano.

Complete Catalogs sent free on Application. To Responsible Teachers we will send on Examination any of our Publications at Special Prices.

Mail Orders Solicited and Filled to All Parts of the Country.

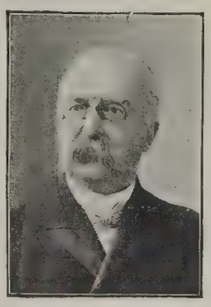
ELSON'S
Music Dictionary
By LOUIS C. ELSON
Professor of Theory of Music at the New England Conservatory of Music



EVER since Tinctor, about 1475, wrote the first music dictionary there has been an endless succession of books dealing with musical definitions. This is but natural and proper since the musical art is constantly changing. A music dictionary, unless frequently revised, easily drops behind the times.

There are no obsolete terms in Elson's Music Dictionary, but every necessary word is included *with its pronunciation*. By pronunciation is meant a phonetic spelling in the English language, not merely accent marks. This applies as well to composers' names, for instance: Rachmaninoff = Rachh-*mahn*-nee-noff.

In addition to 289 pages containing the definitions and pronunciations of all the terms and signs that are used in modern music are the following:

Rules for pronouncing Italian, German, and French.

A list of popular errors and doubtful terms in music.

A list of prominent foreign composers and artists, with their chief works, the pronunciation of their names, and the date of their birth, etc.

A short vocabulary of English musical terms with their Italian equivalents.

The rules for pronunciation will enable the student to pronounce not only the musical terms, but every word in either of the three languages.

Such terms as "Pitch," "Sonata," "Temperament," "Turn," "Scale," "Organ," "Notation," "Form," "Key," etc., are explained at length. In some cases from three to four pages are devoted to a single word. On important subjects full bibliographical references are given.

The book comprises 306 pages and is bound in serviceable cloth covers.

PRICE, POST-PAID, $1.00
Copies sent for examination.

LESSONS IN MUSIC WRITING
A Series of Progressive Writing Lessons for Acquiring a Practical Knowledge of Music Notation
By CHARLES KINKEL

This work teaches not only music writing, but also, in a most practical way, the rudiments of music, signatures, embellishments, etc. It contains thirty-five lessons, and may be used for private or class instruction, and for vocal or instrumental pupils.

The book is printed from clear type, on paper of the best quality. Blank staves are provided throughout for the pupil's written exercises. **In two parts, price each, 30 cents; complete in one volume 50 cents**

Post-paid. Copies sent for examination.

LOOK HERE

WAVING PALMS. Of all Waltzes recently published this one is the best and the most beautiful. It is the finest waltz of 1906, and there is nothing in the market so charmingly dreamy and perfect in rhythm. Grade 3-4. Six pages. Published at 60c. Introductory only 15c. post-paid.

STANDARD AMERICAN AIRS. A new medley **Overture** introducing all (14) well-known national airs. The arrangement is by **Geo. Rosey,** the famous composer of Honeymoon March, Handicap March, Espanita Waltz, etc. Grade 3-4. Nine pages. Published at 60c. Introductory only 15c. post-paid.

BUTTERCUP WALTZ. Just from the press and taken up by the best orchestras. Its principal themes, which are dreamy, are connected by brilliant but easy chromatic runs. A first-class teaching piece. Grade 3. Only 10c. post-paid.

ARNO. By **William Fletcher.** An Italian Water Scene. This beautiful Gondola song without words is being played by Sousa's and Duss' bands. Grade 3. Introductory 15c. post-paid.

JIGS AND REELS. Harding's all-round collection of 200 Jigs, Reels, and Country Dances. Can be used for Piano, Violin, Flute, or Mandolin. A large book of 63 pages. Fifty cents, post-paid.

LAST HOPE. An exceptionally fine new hymn, for Church or Home. For medium voice only. Adapted by **R. A. Keiser** from L. M. Gottschalk's famous composition. Words by **La Touche Hancock.** Only 10 cents, post-paid.

TRANSCRIPTIONS. (Grade V.) **J. Leybach's** brilliant Concert Transcriptions, **Oberon, Freischuetz, Faust, Norma, Sonnambula, Puritani, Palms.** Only 10c. each post-paid, or 70c. for all seven.

RAGTIME TWO-STEPS. The most popular and best Rag Marches and Two-steps are: **Swipesy, African Pas', Sunflower Slow Drag, Manhattan Rag, Polka Dot, Chicken Chowder, Maple Leaf, Tickled to Death, Back to Life, Original Rags, St. Louis Rag.** All grade 3-4. Twenty-two cents each post-paid, or 5 assorted for $1.00.

NEW MEDLEY TWO-STEPS. Seven bright, catchy Marches of medium difficulty, each one containing famous characteristic airs suggestive of the title. Americana, College Airs, Plantation Airs, National Airs, Irish Airs, German Airs, Scotch Airs. Ten cents each post-paid, or 70c. for all seven.

FIVE NEW TRANSCRIPTIONS. (Grade IV.) By **F. W. Meacham,** one of America's best-known arrangers. The titles are: Old Oaken Bucket, Old Black Joe, Mocking Bird, Dixie Land, Old Folks at Home. Any one 10c. post-paid, or 50c. for all five.

FOR CABINET ORGAN. The Organist's Repertoire, Vol. I, 113 pages, 70 Pcs., **The Organist's Repertoire,** Vol. II, 114 pages, 66 Pcs. A grand Collection of original Compositions and Arrangements of the best Authors, also Preludes, Postludes, Offertories, celebrated hymn tunes, brilliant music for festive occasions, National Airs, etc. Fifty cents per volume post-paid, or $1.00 for both.

VIOLIN and PIANO. Artist Life Waltz, Strauss; **Thousand and One Night Waltz,** Strauss; **First Kiss Waltz,** Lamothe; **Valse bleue,** Margis; **Rakoczy March,** Berlioz; **Tannhaeuser March,** Wagner. All complete, beautifully printed on fine paper and correctly edited. Ten cents each post-paid, or 60 cents for all six.

THE NATIONAL CONSERVATORY OF MUSIC OF AMERICA 47-49 West 25th Street New York

WASSILI SAFONOFF, Director

THE President and founder of the National Conservatory (which was chartered in 1891 by special act of Congress), Mrs. Jeannette M. Thurber, has been so fortunate as to secure a worthy successor of the eminent composer, Dr. Dvorak, in its directorship — WASSILI SAFONOFF, for more than a decade Director of the Moscow Conservatory, and recently engaged as the sole conductor of the New York Philharmonic Orchestra. **Mr. Safonoff** will teach at the **National Conservatory** advanced **classes** in the **interpretation** of **pianoforte compositions.** He will **conduct** the **Conservatory Orchestra** (a feeder of the leading American orchestras), and he will have a **class for conductors** the only one of its kind. Besides **Mr. Safonoff** the artistic faculty includes **Adele Margulies, Leopold Lichtenberg, Eugene Dufriche, Leo Schulz, Henry T. Finck, Max Spicker, Chas. Heinroth,** and nearly fifty other well-known teachers of singing and playing in New York. Instruction is given in all branches of the art: **Opera, oratorio, concert, voice, organ, piano, violin,** and **all orchestral instruments;** also **theory, harmony, composition** and **history of music.**

ADMISSION DAILY, Address Secretary only.

FLETCHER MUSIC METHOD

SIMPLEX AND KINDERGARTEN

THIS System places the study of music on a truly psychological and educational basis; hence the drudgery is eliminated, and the pupils develop naturally and artistically, learning to express themselves, not merely to be copyists.

The System has the indorsement at home and abroad of many of the best musicians and educators, such as Dr. Wm. Mason, Dr. William Cummings, London; Dr. Hugo Riemann, Leipsic; Dr. Gerritt Smith, Dr. Anagnos, Franklin Taylor, John Orth, Dr. Lyman Abbott, Thomas Tapper.

Send for circular and read the letters of indorsement from these and many more prominent musicians; also the letters from teachers who have given the method a practical trial of from two to seven years. Address,

Mrs. Fletcher-Copp, 107 Thorndike Street, Brookline, Mass.

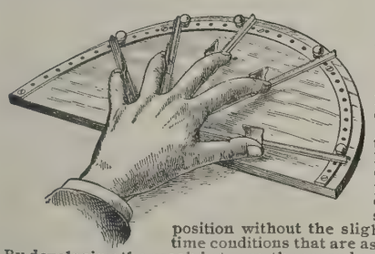
G. SCHIRMER, 35 Union Square, NEW YORK



Kursheedt Hand Expander
PRICE, $3.50. BY EXPRESS, $3.75

As the endorsements of great pianists and teachers testify, the Hand Expander will, after conscientious practice, abundantly supply nature's deficiencies.

Some students have attempted to stretch the fingers on the piano and the result has usually meant injury to their hands and the instrument. Ivory keys cannot support or stretch the ligaments; no exercise of big chords can be mastered unless the fingers be supple and sufficiently expanded. The Hand Expander will reduce the hours of practice in the case of all students with small hands. By examining the apparatus students and teachers will find that they can put their fingers in any position without the slightest difficulty. Daily use of the Hand Expander will produce in a short time conditions that are astonishing. Fingers may be stretched and curved in almost any position. By developing the reach between the second and fourth finger and between the third and fifth finger, the third or fourth finger will acquire strength and independence if worked in the way mentioned in the directions, and enable the student to play exercises that he could not before attempt. Several specialists have written works about finger gymnastics, but no theories can ever take the place of realities. The Hand Expander is a real invention, endorsed now by a number of the greatest pianists and teachers of the United States. These great artists have not only endorsed the Hand Expander, more than that, they have declared it to be a necessity for not only pianists but for all musicians with small hands and weak fingers. Many schools and studios have adopted the Hand Expander with excellent results.

Patented in the United States, Canada, and Foreign Countries. FOR SALE AT ALL LEADING MUSIC STORES

E. B. KURSHEEDT, 10 Bleecker Street, New York

The School of the Piano Pedal
By W. S. B. MATHEWS

THE pedals of the pianoforte are a vital part of the tone controlling mechanism, since they add to the tonal effect elements which cannot be put there from the keyboard. Composers since Chopin have not written the notes in all instances as they mean to sound, but as the hands have to play them. The remainder is left to the uncertain indication of an occasional "ped" here and there in the music.

Artistic pedaling, therefore, is not only a question of making the playing sound better, but often of bringing out an idea, which, but for the pedal, would not be heard at all. Pedaling is an art requiring as careful and systematic study as scale-work, arpeggios, or any element of the technique. Fine playing is impossible without pedals.

The School of the Piano Pedal by W. S. B. Mathews contains complete explanations of the best usage of the pedal. The work is fully illustrated by many original studies and by numerous selections from Bach, Beethoven, Heller, Liszt, Tchaikovsky, Schumann, and Chopin. The studies range in difficulty from the second to the fifth grades. The work is particularly rich in easy pieces of fine quality. Mrs. Blanche Dingley-Mathews' valuable co-operation has made the work especially practical for use with children.

NEW PUBLICATIONS

THREE MELODIOUS PIECES

For the Piano

By CARL BOHM

OP. 371

No. 1.	Invocation. (3B)	50
No. 2.	La Pierrette (Scene de Danse). (3B)	50
No. 3.	Clochettes d'Argent (Silver Bells). (3c)	50

A group of three pianoforte pieces, that will be very useful and acceptable to pianists in general. In point of difficulty, they may be classed with the third grade.

The "Invocation" gives a notably fine exercise in melody-playing with the right hand. Nothing better in this line has appeared in recent years. The theme consists of one long sustained melody, in A flat major and related keys, interestingly varied and embellished and well accompanied. The movement is broad, dignified and exceedingly graceful and elegant.

No. 2. is in the tempo and style of a gavotte, with melodious, spirited subjects, treated with vigor and fine effect. No. 3. contains much interesting and effective work with chords and extended arpeggios.

NEW COMPOSITIONS

For the Pianoforte

By GEORG EGGELING

Op. 111.	Barcarolle. (3c)	40
Op. 112.	Melodie. (3c)	40
Op. 113.	Souvenir de Pesth. (3c)	40
Op. 114.	Scherzo. (4A)	50
Op. 120.	La Capricieuse. Valse. (3A)	65
Op. 123.	Album Leaf. (3B)	40

The advent of six new piano pieces by this favorite composer will be hailed with pleasure by the very large clientele of his admirers. These compositions are indeed welcome and important additions to pianoforte literature corresponding to about the third grade.

The "Barcarolle" is in the characteristic rhythm of that form of composition, and its themes are peculiarly graceful and harmonious. Technically, it is useful as a study of full chords and double notes for both hands. The "Melodie" has also very graceful subjects, the right hand carrying both the air and a chord accompaniment, as in Rubinstein's famous similar work. Op. 113 is a vigorous, dashing piece in the Hungarian style, with much lively chord-work for the right hand.

First rate wrist exercise for both hands is afforded in the Scherzo in which the staccato generally persists in single notes and octaves but which contains also a beautiful legato trio.

Op. 120 is a charming waltz movement, and the Album Leaf is another pleasing melody treated in much the same style as Op. 112.

Four Two-Voiced Pieces

By STEPAN ESIPOFF

OP. 52

No. 1.	Sadness (1c)	No. 3.	Phantom March (2b)
No. 2.	Elf Dance (2a)	No. 4.	Forsaken (2c)

PRICE, 30c. EACH

Reve Hongrois (Petite Rhapsodie) (2c) 40c

Compositions for the second or advanced first grade. The two-voiced pieces furnish the young player with admirable training, not only for the hands but also for the ear and mind. They are strictly harmonic. In other words, the second voice is not a mere duplication of the first voice, in unison, thirds, sixths or octaves, but proceeds independently, supplying in all cases the best supplementary harmonies, and thus affording the pupil a fine esthetic drill and an interesting and useful insight into the correct principles of musical composition.

Technically, the pieces are not difficult, but they offer many opportunities for the cultivation of a good piano style.

The little Rhapsodie, Reve Hongrois, as its name indicates, is in the true Hungarian style, with an abundance of the peculiar accents and modulations which have given that style a lasting charm. The subjects are vigorous and pleasing, and their treatment by the composer is such as to secure a very agreeable variety and effectiveness, with little or no difficulty.

MUSICAL DEKAMERON

10 Little Pieces for the Pianoforte

By N. VON WILM

OP. 225

No. 1.	Flying Leaf. (3A)	40
No. 2.	Tranquillity. (3A)	30
No. 3.	Restless Days. (3A)	40
No. 4.	Confession. (3A)	30
No. 5.	Entreaty. (3A)	30
No. 6.	Disappointment. (3B)	30
No. 7.	Good Humour. (3B)	40
No. 8.	Resolution. (3A)	30
No. 9.	In a Quiet Nook. (3A)	30
No. 10.	By the Fireside. (3A)	30

In the "Musical Dekameron," there will be found a veritable mine of riches for the student of phrasing. Each one of these ten little pieces is overflowing with examples of phrasing in great variety, involving independent action of the hands and fingers continually, syncopation and other irregularities of accent, important and sudden shadings in the volume of tone, some charming points of imitation, and many other delicate little nuances. There is also much scope for digital dexterity, and the harmonic contents are unusually fine and interesting.

All the pieces may be referred to the third grade. Nos. 1 and 2 are the easiest, Nos. 6 and 7 the most difficult. Nos. 3 and 7 are lively and brilliant; Nos. 4 and 6 are good specimens of well constructed slow movements marked by deep feeling; and the others afford excellent studies in melody playing and rhythmical accuracy.

SOME MAETERLINCK MUSIC

LAWRENCE GILMAN

" . . . extracting, by a kind of subtle alchemy, a beauty not without the elements of tranquillity, of dignity, and order, out of a matter at first sight painful and strange." — WALTER PATER (*Greek Studies*).

It is a circumstance perhaps less singular than fortunate that the two composers who have most seriously concerned themselves with setting to music the inventions of that admirable mystic and poet, Maurice Maeterlinck, should have been the very ones who, of all living music makers, were best fitted for that particular task, — Claude Debussy and Charles Martin Loeffler. In Debussy's setting for the lyric stage of *Pelléas et Mélisande*, — in which Maeterlinck's work becomes a *drame lyrique* in five acts and twelve tableaux, — one cannot but recognize a paraphrase which is virtually ideal. Here is the very accent of Maeterlinck, in one of his authentic inspirations, — his very *timbre* and atmosphere; and throughout one realizes how peremptory is the need for music in any such poetic endeavor as Maeterlinck's original — despite his well-remembered and singular disapproval of the process to which Debussy has subjected his play. In this drama nothing that comes to pass is without significance, and even that which is merely contributive possesses an influential beauty and meaning within itself. With what fulness of effect, no less than justness of perception, these implicit qualities have been seized upon and exposed by Debussy one need not now attempt to show. It is sufficient for the immediate purpose of this inquiry to note that Debussy has made exquisitely manifest in his music that in Maeterlinck's tragedy which is most deeply and informingly characteristic. It is difficult to conceive of a task more completely, more perfectly achieved. To realize, by contrast, Debussy's absolute qualification for the enterprise, one has only to set beside his *Pelléas* score the incidental music written for Maeterlinck's play by Debussy's countryman, Gabrial Fauré. To enlarge upon the contrast which such an exhibit would discover would be both futile and invidious. It is sufficient to say that the difference is simply and baldly the difference between entire fitness and obvious incompetence.

Nowhere in Charles Martin Loeffler's work is his capacity for tragic eloquence more unmistakably evidenced than in his symphonic poem inspired by that terrible and perturbing drama of Maeterlinck's, *La Mort de Tintagiles*. For Loeffler the voice of Maeterlinck has here been as the voice of one habituated to the accents of tragic beauty and tragic fate — one whose imagination is thrall to those "silent arrivals of destiny" which yield, for any kindred instinct, so unique and poignant an emotion. Loeffler has sensed with a peculiar intensity this phase of Maeterlinck's thought. He himself, as I have elsewhere observed of him, has a singular power of realizing moods charged with fateful suggestion; a persistent affiliation for those phases of imaginative experience which find issue in symbols of tragedy and terror. What could have been more

MAURICE MAETERLINCK

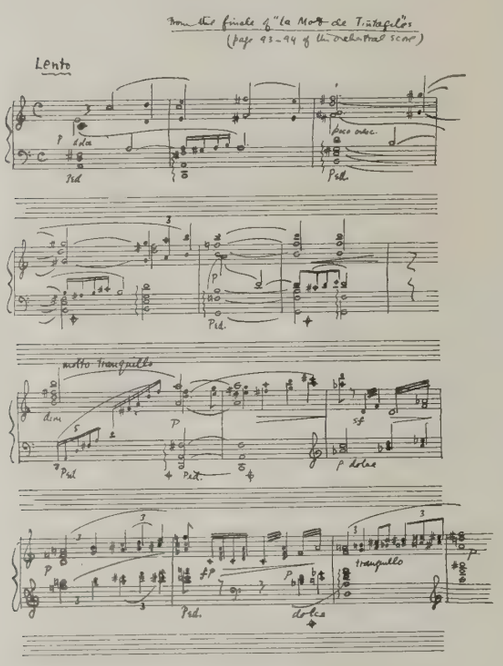
natural than that the drama of Maeterlinck's which most completely embodies his impulse toward the creation of images of tragic destiny should have evoked in Loeffler a desire to seek some tonal correspondence for it? He has succeeded in transmuting the fundamental substance of the play into a tonal fabric of rich and profound suggestiveness. Its power of communication is great and memorable; its justness of representation is as continually surprising as it is compelling. It is music of impassioned and piercing beauty, one of those subtler masterpieces of modern art which exert an increasing spell.

But, for the meditative observer, this paraphrase of Maeterlinck's lacerating and grievous play, and Debussy's equally significant transcription of *Pelléas et Mélisande*, present another and larger aspect than is offered for consideration by their specifically musical quality.

Surely one does not impute to this music an unwarrantable burden in assuming to see in it an exceptionally persuavive demonstration of that power which, among all the arts, the art of music preeminently possesses — the power of transcending and transfiguring its subject-matter: of illuminating what one may call, perhaps not too liberally, its spiritual overtones; of transmuting that in it which is acrid, or obsessing, or tragical, into something richly and deeply solacing. Examine, in this light, the conclusion of Loeffler's music to *La Mort de Tintagiles*. The poignant and affecting tenderness, the grave beauty, of the peroration — those lingering final measures that proceed to so reticent and exquisite a close — have, apparently, no analogue, no complement, in Maeterlinck's play. The music, in this place, seems to have been arbitrarily superposed by the musician upon the dramatic and psychological process of the poet, which is prevailingly sombre, and which ends upon a note of utter and calamitous despair. One finds a similar anomaly in the case of the finale of Debussy's *Pelléas*. The music seems, at first, over lovely, over ingenuous, for the bitter sadness of the play's concluding scene. Yet, when one comes deeply to know and savor this music, and that of Loeffler's which I have adduced, one knows that it is subtly warranted, that it belongs, that it is truly expressive of a reality that is implicit in the subject of the poet. Is not one justified, in attempting an elucidation of such seeming anomalies — which are not, of course, peculiar to the very modern works I have alleged, but are merely, in them, uncommonly marked — is not one justified in saying that the musician may and does disclose in his subject-matter elements of rarefied beauty and meaning that are not conveyed through the verbal medium of the poet or dramatist, or through any art save his own? Is not this, indeed, the chief and essential glory of music? So far as M. Maeterlinck is concerned, one may convict him out of his own mouth, without, perhaps, incurring the reproach of reading his words too literally.

"It is idle to think," he observes in that inexhaustibly beautiful essay of his on *Silence*, "it is idle to think that, by means of words, any real communication can ever pass from one man to another. . . . Were I to speak to you at this moment of the gravest things of all — of love, death, or destiny — it is not love, death, or destiny that I should touch; and, my efforts notwithstanding, there should always remain between us a truth which had not been spoken." One would like to reply to M. Maeterlinck that the art of music may achieve what the art of verbal utterance may not; to argue, indeed, that music alone is capable of complete communication — that

while the poet and the painter may exquisitely express, may, indeed, at times, communicate, music's natural concern is with the *ding an sich* rather than its symbol; with substantives rather than with attributes; with ecstasy, let us say, in its absolute essence, rather than with ecstasy as it is represented by the dramatist through a Juliet; and that the communication of essential things is thus an inevitable function of its being. One might call to M. Maeterlinck's attention an earlier, yet similar (though more extensive), philosophy than his own — the philosophy of a musician who was, if but occasionally and uncertainly, a sound and searching thinker. "The profoundest essence of our thoughts," wrote Wagner in 1857, "is unconveyable in direct ratio as they gain in depth and compass and thus withdraw beyond the bounds of speech — of Speech, which does not belong to our own real selves, but is given us



second hand to help our converse with an outer world that, at bottom, can only understand us clearly when we place ourselves entirely on the level of life's vulgar needs. The more our thoughts depart from that level, the more laborious becomes the effort to express them — until at last the philosopher, at risk of being not understood at all, uses language merely in its inverse sense. . . . Now Music is indisputably the fittest medium for the thought that cannot be conveyed by Speech, and one well might call the inmost essence of all vision, Music."

For M. Maeterlinck, silence is the supreme revealer — it is only through silence, he asserts, that any real communication is effected, "for the reservoirs of silence lie far above the reservoirs of thought." But the reservoirs of music, one might add, lie higher still. It is true that, as he observes, the time has not yet come to speak lucidly of these things. But would not M. Maeterlinck, if he chose to understand it, perhaps to love it, find in music only a richer and more potent form of that telepathic silence that he knows so well — a silence capable of infinite revelation — capable, even, of making audible "the murmur of the gods"?

HOW TO START A PEOPLE'S CHORUS

F. H. SHEPARD

In order to make a real community work in music, a work which shall engage the sympathies of all, it is of the first importance that personal interests be kept strictly in the background. Otherwise professional jealousies and factional feelings will limit the undertaking to a few, instead of reaching out to every portion of the community. Therefore, in taking the initiative, if you are a musician, it is far better to so arrange that the announcement of the enterprise and the preliminary organization be undertaken by an organization or committee. Such a plan removes the personal element and gives the undertaking the dignity and the publicity required, enlisting the sympathy and cooperation of the newspapers, of other organizations, and of public-spirited individuals. This wide publicity also permeates the whole community with interest and enthusiasm, preparing the way for a large class. Through such a plan, and the idea that it is to be a public undertaking, for the benefit of the whole community, the question of a meeting-place will usually be solved. Among the organizations most naturally interested in community work are the churches, which naturally suggests the lecture room as a place for rehearsal; the women's clubs, one or more of which may be actively engaged in educational or community work, in which case the scheme may be adopted as a branch of the club work and placed under the patronage of the Educational or Music Department, and the meetings held in the club rooms. When this is the case the best possible conditions often prevail, for all the churches, instead of one or two, are equally interested. The first step for the musician who is interested in this work is usually to have a quiet talk with some member of club or church who is most likely to be interested and to be able to interest others. After looking over the ground a little to learn who of the community and church leaders might become actively interested, considering the available meeting-places, a suitable leader and the best way to approach each separate force in the community, a meeting of a half dozen persons who show especial interest should follow. This meeting, acting as a committee, may come to a definite decision, issue any desired announcement, and, if desired, issue a call for a public meeting to launch the enterprise.

There are two or three especial points of possible difficulty upon which the success of the plan most largely depends. First, the financial question. Either a guarantee fund or a subscription paper is necessary, or a free hall must be secured; and a director who will either volunteer his services or make his fee depend upon the patronage. Local conditions must determine the question of a free hall and a guarantee fund. Sometimes, in fact very often, the work may have its inception through the singing class organized to improve the congregational singing in some one church.

Upon the director, his personality, devotion, love for the people, the simplicity and rapidity of his methods, and his power and skill as a conductor, depend perhaps most largely the ultimate success of the undertaking. To depend upon a volunteer, therefore, is to risk a gradual loss of interest, a dissolving chorus and failure. In places where financial backing is difficult to secure it may be very possible that the "right man" will share the financial risk, accepting a smaller fee for his services if the class is not well attended. But it should be accepted as a first principle that the class should be self-supporting, though tuition fees and proceeds of the public concerts, leaving outside support merely in the form of a guarantee fund, to cover any shortage that might arise.

It is hardly necessary to complete a formal organization for this preliminary work. It is better to first bring the class together and let them sing. The question of how to get the class is also a vital one. It should be understood first that there are absolutely no requirements as to voice, age, or social standing or knowledge of music. All who wish to learn to sing are welcome, and all welcome alike. But be careful not to patronize your public. Do not let them feel that they are recipients of charity, for they are not. All should pay a small sum, either for a term of lessons or by the single admission. The Damrosch classes in New York, charge, I believe, 10 cents per evening, payment required only when attending. If a free hall can be secured, this price should be sufficient to pay the teacher. If there is any expense for the meeting-place, it can be met by the public concert given by the class at the end of the season.

In the initiatory steps of any undertaking of this nature, much depends upon the personal element, one person's influence being effective in a certain quarter where another might fail entirely. For this reason a little tact in securing the right person to awaken interest in each direction is highly desirable. The whole movement of organization may well be made one of accretion, the first one interesting one other, they two approaching the third, and so on, gradually adding an interest here and an individual there, until a strong public sentiment is created, and the matter thoroughly known through the community. If it is made known that the class is for those who cannot sing, and for those who do not understand music, just as much as for those with good voices and with musical knowledge, that no one will be examined as to knowledge of music or be requested to sing alone, — in a word, that no one will be embarrassed in any manner — it will make a decided difference in the public response. Let it be known that all, old and young, are welcome, that it is for all equally, a true community undertaking.

Those most likely to take an active interest in aiding the establishment of the class are minis-

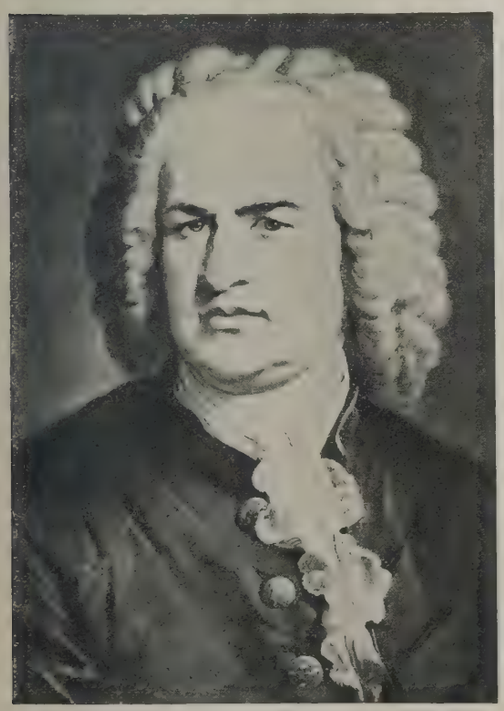
ters, especially those who have congregational singing, Sunday-school leaders, school teachers (a school-room may often be secured from the Board of Education with charge for light, heat, and janitor's services, only), women of a Woman's Club, musical amateurs, leaders and members of established singing societies, leading citizens who employ very many clerks or operatives in store or mill, Y. M. C. A. directors, leaders in civic improvements, town officers, and public-spirited citizens of leisure and culture. Among these may usually be found several of tact and influence who can weld the different portions of the community together sufficiently to give the undertaking a good start, after which its future must rest upon its own achievements.

Suggestions as to the musical features of the class may follow in a later paper. Those interested in the movement are invited to address THE MUSICIAN for these further suggestions, or to communicate, through THE MUSICIAN, with the author of these suggestions for further help.

THE MUSICAL DEBT OF THE WORLD TO OLD AGE

W. FRANCIS GATES

There seems to be a general attack on Dr. Osler's theory of an early chloroforming for the human race. If he had lived in an earlier age and had been permitted to put it into operation, the musical world as well as other divisions of



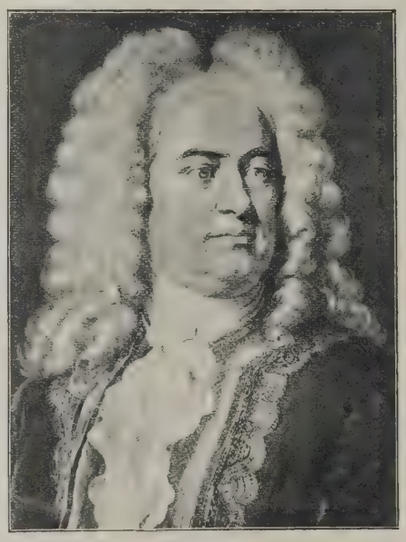
JOHANN SEBASTIAN BACH

creative life, would have been a sad loser. While it is true that eight of the greater composers died under forty years of age, among them being Schubert, Mozart, Purcell, Bizet, Mendelssohn, and virtually Chopin, it is also true that once the decade that has been called the "fatal thirties" is passed, one will find, on examining the mortuary statistics of the art, that seventy per cent of the long list of prominent musicians passed even their sixtieth year.

Years ago the writer was interested in a résumé of the subject published by Professor Willhartitz, the Nestor of Los Angeles musicians, in which he found the average age of several thousand musicians to have reached sixty-two and a half years. Out of one hundred of the most prominent musicians of all times I found seventy-five had passed sixty and ninety were over fifty years of age.

It might be of interest to mention a few of those who reached a great age. While the list might be extended to many names, I will try and keep it within readable limits: Hucbald reached ninety years, Auber, eighty-nine; Verdi, eighty-eight; Cramer and Fetis, eighty-seven; Lachner, eighty-six; Zingarelli and Ambroise Thomas, eighty-five; Cherubini and Dufay, eighty-two; Matheson and Ockenheim, eighty-three; Rameau and Arditi, eighty-one; Palestrina and Clementi eighty; Tartini, seventy-nine; Haydn and Franz, seventy-seven; Moscheles and Rossini, seventy-six; Spohr, Liszt, and Gounod, seventy-five; Lassus, Handel, Em. Bach, Zelter, and Pleyel, seventy-four; Gluck and Gade seventy-three; Meyerbeer and Wagner, seventy; Franck, sixty-eight; Scarlatti, Czerny, and Berlioz, sixty-six; J. S. Bach and Rubinstein, sixty-five; Brahms sixty-four; Dvorak, sixty-three; Boccherini, sixty-two; Corelli and Raff sixty.

Dr. Osler's suggestion, if he was rightly reported, would have hit the musical world pretty hard in former times. This idea that a man's brain is stationary after he reaches



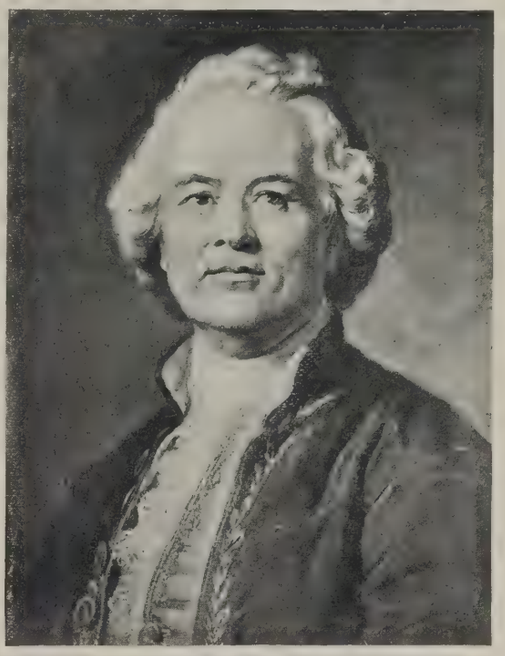
G. F. HANDEL

forty and that he is a nuisance after sixty, and should step off the stage in favor of the younger generations meets with little favor in any walk of life and the worthy medical professor has seen fit to issue a statement to the effect that he "never said it." Be that as it may, let us look a little farther and see how such procedure would affect musical literature and what would have been lost had there been no production after fifty.

In the first place Beethoven's Ninth Symphony, the most monumental work of the most monumental composer, would be missing, for he was fifty-three when that was completed; Bach's *Well-tempered Clavichord* was finished when he was fifty-seven; the *Messiah* was written when Handel was fifty-six and *Israel in Egypt* at fifty-four; *Samson*, at fifty-eight; and *Judas Maccabeus* when he was sixty-one. Gluck composed *Iphigenie in Taurus* at sixty-five; Haydn penned his *Creation* in his sixty-ninth year and his *Seasons* in his seventy-second. Cherubini wrote his *Ali Baba* when he was seventy-three and the great *Requiem in D* when seventy-six.

But these are not all the works of old age. The ever youthful Verdi produced his best operas in his advanced years. *Aïda* was written when he was fifty-six, *Othello* at seventy-three and most wonderful of all, *Falstaff* when Verdi was eighty! Even this record was exceeded by Auber, the French composer, who wrote sixteen operas after he was sixty, the last of which was *La Rêve d'Amour*, composed in 1869, when he was in his eighty-seventh year.

This is a part of the debt the musical world owes to old men, yet who would say a man was "senile" when he could write a *Messiah* or a *Falstaff*. The fact is that a man of brains does not reach the maturity of his powers until he is in his fifth decade. This is proven by many instances which may be quoted in all walks of intellectual life. Notice Gladstone in English politics and letters and such men as Senator Allison in American politics; in literature, note Dr. S. Weir Mitchell, who at seventy-five finished a new novel; in music witness the activity of Leschetizsky



CH. W. GLUCK

and Joachim now seventy-five, and of Grieg, now sixty-three, and note the longevity of late Manuel Garcia, the great singing master, who recently passed the century mark.

One could write indefinitely on the prominence of men over sixty in all the world's affairs, but it is my purpose to speak only of musicians and of these certainly enough data has been given to demonstrate the debt of the world to the second half century of life.

PREPAREDNESS

Begin the morning by saying to thyself, I shall meet the busybody, the ungrateful, arrogant, deceitful, envious, and unsocial, but I, who have seen the nature of the good, that it is beautiful, and that of the bad, that it is ugly, can be injured by none of them. — MARCUS AURELIUS.

MAKE YOURSELF FELT

Let your education be so broad and thorough that, whether you paint pictures, write books, sell merchandise, make contracts, or cultivate land, you will make yourself felt in your community as an all-round man of broad ideas and general culture. — *Success.*

Alexander Luigini, musical director of the Opera Comique in Paris, died recently after one day's illness, from congestion of the liver. He was born at Lyons, March 9, 1850. There he began his musical education under the direction of his father, who sent him later to Paris to finish his studies. His success in Paris was so pronounced that when André Messager retired, Albert Carré trusted him with the directorship of the Opera Comique. He was a fertile composer, having written a number of quartets, cantatas, and symphonic works. His opera, *Caprices de Margot*, had a considerable success in Lyons. The ballet *Egyptien* is full of charm and color, and with Verdi's permission was put in the second act of *Aïda*, when Luigini directed that opera in Lyons.

THE FINE ARTS IN THE CURRICULUM

RUPERT HUGHES

When I was graduated from college I knew, or at least I had been taught, the distinction between a dactyl and an anapest, between a co-sine and a co-tangent, the qualities that differentiated Æschylos and Euripides. I had been taught to conjugate *être*, and to decline *der rothe Wein*. A knowledge of these things, and countless others more or less nice or large, and more or less forgotten now, was forced upon me, willy-nilly.

But so far as anything I got from college studies went, I might have lived all my life without knowing the difference between a five-finger exercise and a symphony, between an adagio and a presto, between Bellini and Wagner, between chiaroscuro and impasto, between a terra-cotta of the della Robbias and a Phidian pediment group, between one of Raphael's cartoons and one of Cruikshank's, between a basilica and a gargoyle.

Of course the universities do not pretend to teach everything, or any considerable portion of everything to any one student, in spite of the impression some new-foaled graduates would give. But a college education surely stands as a guarantee of a certain culture, or at least a proper foundation for culture.

Now no man can be called cultured, in the most liberal use of the word, if he has absolutely no conception of the first principles of any of the arts except belles-lettres. And 'tis true, 'tis pity, that the average collegian goes forth into the world with just enough mental refinement and self-respect in other things to make him a hopeless and cheerful Philistine in his attitude toward music, painting, sculpture, and architecture. His beau-ideal of music is likely to be the veriest trash; his favorite painting is doubtless a story picture of the sickliest type; his choice in architecture is gingerbread; and, worst of all, he doubtless approves the portrait statues of eminent Americans that fill the public squares with hobgoblins. The collegian is very sure, too, to look down upon the ordinary artist, who lacks collegiate training, as a fellow of a very one-sided and limited culture.

The object of college training, except for those who begin professional studies there, is, of course, rather a system of mental calisthenics and general improvement than a Gradgrindish effort to fill skulls with facts.

But surely where it is possible — and it will prove almost everywhere possible — the effort should be to train the student's mind upon things that combine mental exercise with the inculcation of knowledge that shall in the future be of constant use. Of many things in the college course one can say, *Haec olim meminisse juvabit;* but of too few can it be said: These things will some day be of direct use. For this reason it is profitable to advocate the dropping of certain studies, however hallowed by tradition, and the replacing of them with studies of equal value as mental training and of daily service in after life. Nothing could be found to serve this double end better than foundation courses in the fine arts.

Educators are hard put to it nowadays in making up a curriculum. The inroads the modern languages are making upon the classics have divided instructors into two camps. The problem of keeping scientific studies up to date is always vexing. To foist upon the curriculum courses in the fine arts would complicate the problem still further. And yet while collegiate study is undergoing a revolution is the best time for the insistence upon some attention to the despised arts.

Some of the more advanced branches of mathematics might yield place profitably to studies in musical theory. The tangles of thoroughbass and the more trying problems of counterpoint and fugue have decided kinship with other branches of higher mathematics, and would prove of equal force as a test of ingenuity hampered by rules. Greek and Roman history, and particularly the vexing confusion of the Dark Ages, might be abbreviated enough to permit a glance at the story of the fine arts. A Greek play the less and a Latin author or two omitted would give room for a surprising amount of elementary training in the critical standards of the arts. To think that the dry bones of Livy, and the agonizing indirect discourse of Cæsar, and the painful parasangs of Xenophon should be permitted to absorb the priceless time that might give one an introduction to the Parthenon, to Praxiteles, Botticelli, Schumann!

It is not to be expected — it is hardly to be desired — that the collegian be given any elaborate study of these arts. It would be a thousand pities to send him forth academically convinced that the classics are the only and the final speech in art, and that he knew all about the classics. There are very few points, too, on which the most learned criticism is agreed. But there are certain general principles on which all consideration of the arts must be based. Their history is of vital importance in forming any estimate of old or new works. A start in the right direction is everything; it is just this start that is needed by the young. But unless they get such direction from natural inclination, or from home life, or accidental association, the average of our citizens begin life blind to the most primitive conceptions of values in art.

The particular manner in which this infinitely desirable pabulum shall be disseminated to students is for experienced educators to determine. Courses in the arts should not be thrust aside into elective studies or elective groups, but should be required as much of the scientific student as of the literary. A series of lectures with enforced attendance would be of decided value, for some of the information scattered is bound to stick in the memory. The class questioning and demonstration of regular recitation would be of still more value. Of course, it is the principles of the arts, not their practice, that should be taught to the general student, and any increase in the number of piano thumpers and dabblers in water colors would be as uncalled for as the turning out of motormen from the electrical courses, and the making of corpses out of all students of the dead languages.

In view of the controversy waged on almost every point, the tuition should not be dogmatic, but analytic, comparative, suggestive, and stimulating. The details, however, to repeat, are for the educators to decide; the layman can only insist that there is a crying need for some consideration of the fine arts in the make-up of a liberal education. They have played too important a part in the history of the world, and they are too important to human character and to the refinement of earthly happiness, to be neglected as they are in the schools. — *Reprinted from the Musical Record.*

LONDON AUDIENCES ARE SYMPATHETIC

LILY BRAYTON

The sympathy of an audience, or the want of it, with the players on the stage is one of the hardest things in the world to account for or to define.

One thing is certain — if the actress feels that she has not the sympathy of the audience with her it makes it infinitely harder for her to play her part than if she had. There have been occasions when, directly I went on to the stage, before I had spoken half a dozen lines, I knew the audience were not in a responsive or sympathetic mood. It is a most disagreeable experience to feel like this; all the more so, perhaps, because there really seems no precise or tangible reason why one should do so. But it is not a fanciful feeling in the least; it is a real fact that almost directly the curtain goes up every player on the stage knows instinctively whether the audience is or is not in a responsive and sympathetic mood.

As a general rule, actresses get the sympathy of an audience quicker than actors, and sometimes will be able to put a cold and irresponsive audience into a much pleasanter frame of mind and better temper. It is not easy always to excite the sympathy of an audience when playing in Shakespearean comedy; not because the public do not understand Shakespeare or appreciate his works, but because his plays appeal, perhaps, more to the intellect than to the emotions. In a highly emotional play like *The Resurrection* — which appeals with great force to the emotions — it is easy to enlist the sympathy of the audience at once. I do not mean to say for a moment that you cannot get the sympathy of the audience in Shakespearean plays — I think we have had responsive audiences at the Adelphi since *Midsummer Night's Dream* was put on — but I mean in more emotional plays you can arouse the sympathy of the house more readily. Personally, I love playing in Shakespearean parts; but in a part like that which I played in *The Resurrection* I should feel surer of arousing the sympathy of my audience. All things considered, I should say that the modern theatrical audience is inclined to be sympathetic, and always willing to be interested. For instance, if a play has a dull opening, it cannot be expected that the audience will be sympathetic at first; but they will, as a general rule, follow the development of the piece with attention, and directly an interesting scene or situation occurs their sympathy with the players will at once be felt by the latter.

Audiences, however, differ considerably, especially in the Provinces. When we were touring with *The Taming of the Shrew*, we visited a number of places in the North, and it was noticeable that at each place we were received in a different spirit. I really do not think we were accorded anywhere a bad reception, but at some places the audience was inclined to be much more critical than at others; that is to say, I felt that judgment was being passed on us in a calm, judicial spirit, whilst at others the verdict of approval was given in a more spontaneous and ready manner. Provincial audiences are, as a rule, however, far more demonstrative than they are in London. In the Provinces the end of a speech in a play frequently will be greeted with cheers, which rarely is the case in a London theatre. In London, of course, each theatre has a certain following of people, who go more often to one particular house than to any other. At the Adelphi Theatre on several occasions I have noticed the same people among the audience, and am now quite familiar with their appearance. They always occupy the same seats, so that I know at once where to look for them. Of course, I could not recognize any person's appearance when playing on the stage, but when we get a call before the curtain I can ascertain whether the familiar faces are present among the audience.

The presence of regular patrons is pleasing; for there is, after all, no truer sign of the merits of a play, and also of the players, than that both should regularly attract the same people.

Late comers to a theatre are, I fear, not sympathetic people. Apart from the trials their late arrival often inflicts on some of the audience, it has frequently a disturbing effect on the players occupying the stage.

If an actress is in the middle of a speech that requires careful acting, it is upsetting to her to have it interrupted by some late arrivals making their way to their seats.

The actress becomes conscious at once that the attention of the audience, or a part of it, at any rate, is being disturbed, and she knows in consequence that the particular effect which she is striving to produce will be spoilt or altogether missed. It is a most annoying experience which probably every actor and actress has to go through from time to time; but audiences are, as a rule, quick to forgive and forget the annoyances which the late comers cause them to feel, and players, I suppose, should be equally generous.

A breakdown or a hitch of any sort nowadays is a rare occurrence in any well-regulated theatre, but when such a mishap does occur I think the sympathy of the audience always is with us, when it is appreciated highly.—*Exchange.*

APHORISMS

Time that is lost is never found.

A soft answer may be a hard argument.

Difficulties are meant to rouse, not discourage.

It is more profitable to read one man than ten books.

One always has time enough if one will apply it well.

He who takes good care of the days need give himself no worry over the year.

Character consists in a man steadily pursuing the things of which he feels himself capable.

A fault which humbles a man is of more use to him than a good action which puffs him up with pride.

The Choir Leader. — "He's the most remarkable singer I've ever had in the choir."

The Trustee. — "Got such a splendid voice, eh?"

The Choir Leader. — "No, but he takes a genuine interest in the sermon." — *York Dispatch.*

THE LESSON CLUB

Conducted by DR. PERCY GOETSCHIUS

A series of How to Do articles, distinctly practical, inspiring, and suggestive. These lessons will continue to appear; the best authorities will contribute them. Any suggestion from readers of THE MUSICIAN which will be of aid to one or to many readers will win our immediate consideration.

"You will learn . . . that there is no genius in life like the genius of energy and industry. You will learn that all the traditions so current among very young men, that certain great characters have wrought their greatness by an inspiration, as it were, grow out of a sad mistake. And you will further find, when you come to measure yourself with men, that there are no rivals so formidable as those earnest, determined minds which reckon the value of every hour, and which achieve eminence by persistent application."—IK MARVEL, *Dream Life*.

LESSONS IN MODULATION

PERCY GOETSCHIUS, MUS. DOC.

Having thoroughly exercised the act of modulation into the dominant and subdominant keys (those whose key-notes are respectively a perfect fifth above and a perfect fifth below the original key-note), in both modes, the student may turn his attention next to the so-called "relative" key. The term is a trifle indefinite, inasmuch as several keys group themselves, in various degrees of relation, around each key, and each of these is a "relative." Observe that the word "related" is used, however, in reference to every key which possesses a certain degree of affinity with another, whereas the term "relative" is limited to one only of the five or more related keys, — namely, to the key which has the *same signature*, and which is therefore, perhaps, the most intimately related of all, at least in some respects. For example, C major and A minor are called "relative" keys; A minor is the relative minor of C, and C is the relative major of A. The relation is based upon resemblance of scales; one form of A minor (the descending melodic form), chances to be identical with the C major scale, and no other key exhibits so close a resemblance to C major as this. It accounts, also, for the similarity of signature between the "relative" keys. There are no specific minor signatures; for each minor mode one of the major signatures is borrowed, — that one, naturally, which is most convenient, which most nearly corresponds to the contents of the minor scale.

The modulation into the relative key is very easily made, both from major into minor, and the reverse. It does not appear to shift the modulatory stratum, as the dominant and subdominant modulations do (up and down a perfect fifth, or one "harmonic degree"), but merely alters the mode of the same stratum (that is, of the *same signature*).

It may be, and frequently is, made according to the fundamental rule: closing the first key with one of its tonic chords and entering the relative through its dominant or second-dominant harmony. Thus (from C major to A minor, and back again): —

Ex. 16.

But the transition is very often made, both ways, through the diminished triad which stands upon the leading tone (7th step) of the major, and upon the second step of the relative minor, — thus being common to both keys. As is the case with all diminished triads, the only good form is the first inversion (chord of the 6th). For illustration: C major to A minor, and back: —

Ex. 17.

Each key has its relative; in every case, of course, the signature is the same, and the modulatory significance of the two keys is nearly identical. Thus, there is a relative of each dominant and subdominant key, — with signatures, as usual, one degree higher and lower than that of the central key. The dominant keys, as has been learned, have either one sharp more, or one flat less. *If the mode changes, the key is "relative"*; otherwise, it is the "dominant." The keys with two sharps (for instance) are D major and B minor; their dominant keys have three sharps, — A major and F♯ minor. Their detailed relations are as follows: —

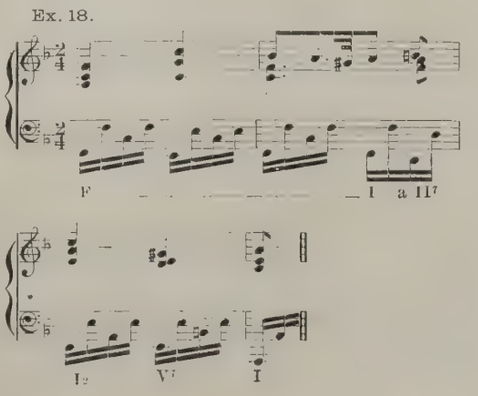
D major — A major, dominant key; B minor — F♯ minor, dominant key; D major — F♯ minor, dominant-relative key; B minor — A major, dominant relative key. In a word, adding one sharp to (or taking one flat from) the signature, leads into the dominant key; changing the *mode*, at the same time, gives the relative of the dominant.

Exactly the same rule applies to the subdominant and its relative, simply reversed, of course. Adding one flat (or taking away one sharp), gives the subdominant key; changing the *mode* at the same time results in the relative of the subdominant. For instance, two flats down to three: —

B♭ major — E♭ major, subdominant key; G minor — C minor, subdominant key; B♭ major — C minor, subdominant-relative key; G minor — E♭ major, subdominant-relative key.

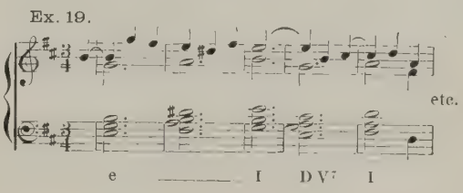
The modulation into the relative of the dominant, or subdominant, is generally made according to the fundamental rule. For example, a dominant-relative modulation from major, from the *Pastoral Sonata* of Beethoven (F major to A minor): —

Ex. 18.



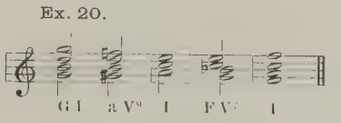
and another, from minor, from Beethoven's *Sonata*, Op. 10, No. 3 (E minor to D major): —

Ex. 19.



The harmonic basis of a subdominant-relative modulation from major, and on from minor, might be about as follows:—

Ex. 20.



The student will soon learn that there is no great difference between any of the five "next-related" modulations hitherto explained. The harmonic process, so far as the fundamental rule is concerned, is simple enough, in every case. He must know his keys perfectly; must be so familiar with the signatures that he can determine without hesitation, all of the five next-related keys; and must be thoroughly aware of the three principal harmonies of every key, in every conceivable position and condition. With this equipment, which is the least to be expected of a conscientious music student, and which is not nearly as formidable as it may appear, all that is left for the student is that "practice which makes perfect."

EXERCISE. — Modulate, in separate four-measure phrases, simple or embellished, as usual, from every major key to its relative minor. Also from every minor key to its relative major.

Modulate, similarly, from every major key to its dominant-relative (minor); and from every minor key to its dominant-relative (major).

Modulate, similarly, from every major key to its subdominant-relative (minor); also from every minor key to its subdominant-relative (major).

The late Horace Fry left among his diminished possessions the score of the first grand opera worthy of the name that was ever composed and produced in this country. It was the work of his brother, William Henry Fry, who was an impresario, lecturer, and writer on music and one of the most active figures in the early operatic history of the country. Mr. Fry called his opera *Leonora*, and it was produced at the Park Theatre in the year 1845. It did not, of course, hold the stage any more than a grand opera of native authorship could be expected to do to-day, but it marked an epoch in the musical history of the country. The score, which is in the handwriting of the composer, will go to some museum in New York or Philadelphia.

ELEMENTARY FRENCH

A. RHEINGAUER

LESSON IX

When *jouer* (to play) is applied to a musical instrument, it is followed by the preposition *de* (of). Thus: —

Jouer de la harpe, to play (on) the harp.

The preposition *de* (of) and the definite article *le* (the) are contracted into one word, *du*. Therefore: —

Jouer du piano, to play (on) the piano.

When the subject of an interrogative sentence is a noun (without an interrogative adjective), the subject is placed before the verb. Then it is repeated after the verb in the form of a pronoun. The latter must agree in gender and number with the noun. Ex.: —

De quel instrument les violonistes (subject-noun) *jouent* (verb) *-ils* (pronoun standing for *les violonistes*)? What instrument do violinists play?

Read and translate

Un violoniste joue du violon; un pianiste joue du piano. De quel instrument les pianistes jouent-ils? Quel artiste joue du violon? Jouez-vous d'un instrument?

VOCABULARY

To be committed to memory

Un violoniste, a violinist; *un pianiste*, a pianist; *jouer*, to play; *quel*, masc. (an interrogative adjective), what, which; *un artiste*, an artist; *d'* (before a vowel), of.

Translate into French

1. A pianist and a violinist. 2. The pianists and the violinists. 3. Who plays the violin? 4. Who plays the piano? 5. Name a popular artist. 6. What instrument does he play?

LESSON X

The word *musicien* is used as an adjective as well as a noun. When it is used adjectively, it omits the article. Ex.: —

Il est musicien, he is musical (a musician).

Mon (my) before a masculine in the singular.

Ma (my) before a feminine in the singular.

French adjectives ending in *ien* double their final consonant before adding *e* for the feminine form. Ex.: —

Musicien (masc.), *musicienne* (fem.).

Le takes the place of a French adjective when the English word *so* is either expressed or understood. Ex.: —

Etes-vous musicien? Oui, je le suis. Are you musical? Yes, I am.

J'ai, I have.	*ai-je?* have I?
Vous avez, you have.	*avez-vous?* have you?
Il a, he has.	*a-t-il?* has he?
Elle a, she has.	*a-t-elle?* has she?
Je suis, I am.	*suis-je?* am I?
Vous êtes, you are.	*êtes-vous?* are you?
Il est, he is.	*est-il?* is he?
Elle est, she is.	*est-elle?* is she?

Read and translate

J'ai un frère et une sœur. Mon frère joue du piano; il est musicien. Ma sœur joue du violon; elle est musicienne. Etes-vous musicien (musicienne)? Oui, je le suis. De quel instrument jouez-vous? Qu'êtes-vous? Que suis-je? Qu'est-il? Qu'est-elle?

VOCABULARY

To be committed to memory

Le frère, the brother; *la sœur*, the sister; *le musicien*, the musician (masc.); *la musicienne*, the musician (fem.); *mon* (masc.), *ma* (fem.), my; *que* (before a vowel *qu'*), what.

Translate into French

1. I am a musician. 2. What am I? 3. Have you a brother? I have two brothers. 4. My sister is a musician. 5. What instrument does she play? 6. Do you play any (translate an) instrument? 7. Are you musical?

LESSON XI

Before a vowel, *d'* and *qu'* take the place of *de* (of) and *que* (as, than) respectively. Compare the reading exercise of this lesson.

Names of continents and countries, such as *l'Europe* (fem.), Europe, *la France*, France, etc., are used without the definite article when preceded by *en* (in, to). Thus: —

En Europe, in or to Europe.

En France, in or to France.

If, however, the name of a country occurs in the plural only, the definite article is not omitted, and *in* or *to* is expressed by *à*. Thus: —

Aux (= *à les*) *Etats-Unis*, in the United States.

Read and translate

P. est un pianiste (un violoniste) d'un talent remarquable. Il joue admirablement bien. Tout le monde l'aime. Il est aussi populaire en Europe qu'aux Etats-Unis.

VOCABULARY

To be committed to memory

Le talent, the talent; *remarquable*, remarkable; *admirable* (adj.), admirable; *admirablement* (adv.), admirably; *tout le monde*, everybody; *les Etats-Unis* (masc.), the United States; *l'Europe* (fem.), Europe.

Translate into French

1. P. plays two instruments. 2. He plays the piano and the flute. 3. He is a popular artist. 4. Everybody likes him. 5. He plays remarkably well.

LESSON XII

Verbs ending in *er* form their past participle by adding *é* to the radical. Ex.: —

Parl-er, to speak; *parl-é*, spoken.

J'ai parlé, I have spoken, I spoke.

Vous avez parlé, you have spoken, you spoke, etc.

De (of) and *les* (the) are contracted into one word: *des*, of the.

Y, to it, to them, etc., precedes the verb. Ex.: —

Nous y ajoutons, we add to them.

Singular	*Plural*
Quel (masc.), what, which.	*quels* (masc.), what, which.
Quelle (fem.), what, which.	*quelles* (fem.), what, which.

The interrogative adjective *quel* agrees in gender and number with the noun it modifies. Therefore: —

Quel adverbe, what adverb?	*quels adverbes*, what adverbs?
Quelle leçon, what lesson?	*quelles leçons*, what lessons?

Read and translate

Dans la huitième leçon nous avons parlé des adverbes *forte* et *piano*. Nous y ajoutons leurs comparatifs *piu forte* et *piu piano*. Quel est le comparatif de *forte?* Quel est celui de *piano?*

VOCABULARY

To be committed to memory

Dans, in; *le, la, huitième*, the eighth; *la leçon*, the lesson; *parler*, to speak; *ajouter à*, to add to; *y*, to it, to them, etc.; *leur* (masc. and fem.), their; pl., *leurs*, their; *le comparatif*, the comparative; *celui* (masc.) *de*, the one of.

Translate into French

1. I am speaking of an adverb. 2. I have spoken of two adverbs. 3. Of what (*quoi*) have I spoken? 4. Of what adverbs have you spoken? 5. In what lesson have we spoken of the adverb *forte?*

ELEMENTARY GERMAN

F. C. BURKART

LESSON IX

Review the endings of German adjectives as given in Lesson VI and the personal pronouns in Lesson III.

Man (one, people, they) always requires the verb in the third person singular. An active verb with *man* often takes the place of an English verb with a passive construction. Ex.: —

Man spielt es oft, it is often played.

Note the position of the adverb in the following example:

Ich höre es oft, I often hear it.

Sehen (to see) changes the vowel of its stem in the third person singular of the present indicative. Thus: —

Er, sie, es sieht, he, she, it sees.

Unter, under, among, governs the dative in answering the question *where*. Ex.: —

Unter Musikfreunden (dat. plural), among lovers of music.

Read and translate

Das Klavier ist ein beliebtes Instrument. Man sieht und hört es oft, und ein guter Klavierspieler (eine gute Klavierspielerin) ist unter Musikfreunden ein gern gesehener Gast.

VOCABULARY

To be committed to memory

Beliebt, popular; *sehen*, to see; *hören*, to hear; *oft*, often; *ein Klavierspieler*, a pianist (masc.); *eine Klavierspielerin*, a pianist (fem.); *unter*, among; *der Musikfreund*, the lover of music; *gern gesehen* (literally, gladly seen), welcome; *der Gast*, the guest.

Translate into German

1. I often play the piano. 2. I like to hear it. 3. I often hear it. 4. What instrument do you like best? I like the violin best of all. 5. Sauer is a good pianist. 6. I often hear him play.

LESSON X

Wie nennt man . . . what do they call . . .

A clause introduced by a relative pronoun requires the transposed order. Ex.: —

Ein Mann, der seine Kunst versteht.

A man who understands his art.

The definite article is used in German with abstract nouns. Ex.: *die Musik*, music.

Masculine nouns of foreign origin ending in *ist* add *en* for the genitive, dative, and accusative singular, and all cases of the plural. Therefore: —

Nom. *Ein Pianist*, a pianist.

Acc. *Einen Pianisten*, a pianist.

When *Sie* (you) is the subject of an imperative sentence, it cannot be omitted. Ex.: —

Nennen Siel name.

Masculine nouns ending in *e* add *n* for all cases of the plural. Ex.: —

Der Name, the name; pl., *die Namen.*

The genitive of *einige Künstler* (some artists) is *einiger Künstler.*

Read and translate

Wie nennt man einen Mann, der seine Kunst versteht? Man nennt ihn einen Künstler. Was ist ein Sänger, ein Geiger, ein Pianist? Hören Sie einen Geiger lieber als einen Pianisten? Nennen Sie eine Kunst! Nennen Sie die Namen einiger Künstler! Ist die Musik eine Kunst?

VOCABULARY

To be committed to memory

Nennen, to call, to call by name, to mention; *ein Mann*, a man; *der* (masc.) (relative pronoun), who, which, that; *seine* (fem.), his; *die Kunst*, (the) art; *verstehen*, to understand; *der Künstler*, the artist; *der Sänger*, the singer; *der Geiger*, the violinist; *der Pianist*, the pianist; *die Musik*, (the) music; *als* (*after a comparative*), than; *der Name*, the name; *einige*, some.

LESSON XI

Compare the examples given in Lesson VI for the endings of the German adjective with the terminations of the adjective in the following example: —

Nom. *Lauter Beifall*, loud applause.

Acc. *Lauten Beifall*, loud applause.

The article, though needed in English, is omitted in German after *als*, as. Ex.: —

Als Lehrerin, as a teacher (fem.).

Modifiers are placed before the word they modify. Ex.: —

Sie ist weit und breit bekannt.

She is known far and wide.

Read and translate

Fräulein P. ist eine viel bewunderte Künstlerin. Ihr Spiel findet immer lauten Beifall. Sie ist auch als Lehrerin weit und breit bekannt.

VOCABULARY

To be committed to memory

Fräulein P., Miss P.; *eine Künstlerin*, an artist (fem.); *bewundern*, to admire; *viel bewundert*, much admired; *ihr*, her; *das Spiel*, the play, playing; *lauten Beifall finden*, to meet with loud applause; *die Lehrerin*, the teacher (fem.); *weit und breit*, far and wide; *bekannt*, known.

Translate into German

1. Miss P. is a much-admired teacher. 2. She is also known as an artist. 3. She is admired (translate they admire her) as a teacher and an artist. 4. What instrument does she play?

LESSON XII

Lassen (to make, to cause) modifies the vowel of its stem in the third person singular of the present indicative. Thus: —

Er lässt, he makes, causes.

The nominative and accusative singular of a German noun differ in the masculine gender only. Ex.: —

Nominative	Accusative
Der Ton	*den Ton*, the tone
Die Stimme	*die Stimme*, the voice
Das Instrument	*das Instrument*, the instrument

The nominative and accusative plural of all German nouns are alike. Ex.: —

Die Töne (nom. and acc.), the tones.

The genitive of *sein Instrument* (his instrument) is *seines Instruments* (of his instrument).

German adjectives add *er* or *r* for the comparative. Ex.:—

Positive	Comparative
laut, loud	*lauter*, louder
leise, low, gentle	*leiser*, lower

A number of monosyllabic adjectives modify their vowel in the comparative. Ex.: —

stark, strong, loud	*stärker*, stronger, louder
schwach, weak, faint	*schwächer*, weaker, fainter

Adjectives are used as adverbs both in the positive and the comparative.

For the position of the infinitive, compare the following exercise.

Read and translate

Ein Redner lässt seine Stimme bald *lauter* bald *leiser* ertönen. So lässt auch ein Musiker die Töne seines Instruments bald *stärker* bald *schwächer* erklingen.

VOCABULARY

To be committed to memory

Ein Redner, a speaker; *bald . . . bald*, now . . . now; *ertönen, erklingen*, to sound, to resound; *so*, so; *ein Musiker*, a musician.

A COURSE IN LISTENING

EDWARD BURLINGAME HILL

FORM AND EXPRESSION

We have estimated separately the proportionate values which rhythm, melody, and harmony assume in the upbuilding of the subtle and complex structure of music. We learn that rhythm is the pulse of music, — its virtual heart-beat; that melody, whether concentrated in one part with a simple "harmonic" accompaniment, or diffused through several parts as in the modern polyphonic style, gives to music its precision, flexibility, and beauty of outline; that harmony, with its dual capacity for adding an emotional background or suggesting hidden melodies (often both at once), not only brings out and emphasizes the specific character of the melody, but adds personality and mood. It disseminates that elusive quality which the musician, after the analogous effect in poetry and painting, terms color. These various forces, pulse, outline, and color, essential as they are in the materials they offer for the structure of music, are ineffective and incomplete unless supplemented, controlled, and unified by still another quality. They must be subject to that internal compelling sense of coherence and logical development which we call *form*. It is on account of the preeminent influence of form that we are aware of a sense of proportion, clarity of construction, and especially palpable expression, when we listen to music. It is form which leads us to appreciate that phrase balances phrase, that section corresponds to section, that the piece or movement as a whole has unity, and finally that, aside from its technical elements, it has an expressive purpose.

Within the limits of this paper it will not be possible to give even an imperfect account of the manner in which a theme or musical phrase is extended to form a musical sentence, or how those "sentences" become paragraphs, and so on. It will be enough to indicate the general tendencies of so-called thematic development, and to mention the chief discoveries with which the course of musical evolution has enriched form.

To begin with, a musical theme has certain noticeable intervals, — a trick of rhythm. The next phrase will answer the first either in *imitation* of the characteristics of interval and rhythm or in contrast to them. Then by means of the *cadence* (literally "falling," a strongly indicative harmony pointing either to the *dominant* or *tonic*) the sense of coherence is satisfied, and the sentence ends, or the way is open for an extension of the ideas already used. Each new variety of interval or rhythm may be the stepping-stone to further variations, which thus become the mortar and cement which give continuity to the musical structure as a whole. These possibilities in variation of the initial phrases, with the use of *cadences* and *modulation*, are the chief factors in musical construction. Modulation is helped out by the *imperfect cadence*, which may lead from the *dominant* into various keys, introducing a priceless element of variety. However, *modulation* is useful chiefly as a contrast; it must not obscure the original key of the piece, nor the firm relation of other keys which may be touched upon in its course. While *tonality* or *relation of keys* is a strong element in determining the coherence of music, its supreme test consists in the logic with which detail answers to detail; coherence to be real must extend to the smallest thematic unit. Study of music, even in the simplest forms, by any of the great masters, will confirm the searching truth of this assertion.

If we start to review (not chronologically) the results achieved by the musical mind in its efforts towards coherent expression, we find that there are two general classes into which they may be divided, — *contrapuntal* (the style in which superimposed melodies take precedence of the vertical harmonic point of view) and *homophonic* (where a free development of phrase not necessarily involving strict part-writing is the striking feature). The simplest species of contrapuntal form is the *canon*, in which the opening phrase is repeated literally at a definite interval, either by one, two, or three voices (two, three, or four part canon). While there many varieties and some developments of the canon form, two deserve especial mention: the *motet*, an early extension of a canon in several parts for voices, which nevertheless possessed some latitude of expression; the *fugue*, a specialized canon (for instruments and also for voices), obeying certain definite rules peculiar to this form, of somewhat later growth than the motet, which, under Bach, became an individual and spontaneous medium of expression. There have been chiefly sporadic examples of good use of the fugal form since then.

The simplest species of homophonic form is the so-called song form, on account of its preeminently lyric character. The opening section is followed by a second, which leads to a repetition of the first. This form may be said to be the germ of all the others. The next in order of complexity is the variation form. In its earlier stages the variations were chiefly more and more florid disguises of the theme, in which the theme itself is often repeated at the end by way of epilogue. Later variations partook more of the character of genuinely varied aspects of the theme, both in expression and in harmony. Still later came the evolution of having variations on variations, which branch out from one another in groups. Thus they have the organic unity of a tree trunk and its branches. Another form is the rondo, in which an opening theme recurs at intervals, interspersed with episodes of differing character. The greatest tribute to form paid by the classic masters was the sonata form. The type of sonata has a first movement in sonata form; a slow movement, sometimes in extended song form, sometimes variations, sometimes even rondo form; a minuet or scherzo in song form; a finale in rondo or sometimes sonata form. To generalize briefly, the sonata form consists in the opposition, the playing off of one against the other, of two contrasting themes. This consists of three sections: exposition or statement of the themes; second, development (emphasizing and extending the differing character of the themes); third, recapitulation (a re-statement of the exposition with variants and an epilogue called the *coda*). This form was outlined by Philipp Emanuel Bach, nurtured by Haydn and Mozart, made a convincing vehicle of expression by Beethoven, and given final if somewhat pedantic touches of elaboration by Brahms.

The symphony is an enlargement of the sonata, with some adaptation of variation and fugal forms. The most comprehensive of all forms is undoubtedly the symphonic poem. While it may not concern itself so strictly with questions of abstract symmetry as the sonata form, it has a far greater capacity for human expressiveness, and it is broader in its scope, for it has eventually absorbed the essence of all forms. In its primitive conception by that remarkable innovator, Franz Liszt, a leading theme was subjected to modification, not according to contrast with another theme, in which certain key relations were maintained, but in response to the emotional or philosophic contents of a statement of ideas or a narrative called a *program*. The possibilities of this form were explored by Tschaikowsky in his poems *The Tempest*, *Francesca da Rimini*, and others. Still later Richard Strauss has combined the general treatment of the symphonic poem with the characteristics of older forms. Beginning with the Lisztian type of symphonic poem in *Don Juan*, *Macbeth*, and *Death and Transfiguration*, he has assimilated the traits of the rondo form in *Till Eulenspiegel's Merry Pranks*. Also *Sprach Zarathustra* contains a fugue, *Don Quixote* employs a scheme of daring variations, and *Ein Heldenleben* is approximately in sonata form. From the standpoint of real coherence and sheer power of thematic development, these poems of Strauss mark an era in the evolution of form.

In considering the progress of form in its various manifestations, it must be remembered that logical construction and coherence exist only in the interests of the primal object of musical art — expression. It remains for the performer who would improve through self-criticism to see that it is only through a perfect subordination of the several elements of musical interpretation that the proper effect as a whole is projected towards the audience. A correct seizing of rhythmic character, a broad phrasing of the melodic element properly colored by its appropriate harmonic significance, are but the first steps in order that the real message of the music itself be adequately felt. The process is called synthesis (putting together, the reverse of analysis), the combining of the elementary ingredients in a harmonious whole. Coherence of expression, then, must result not from exaggerated attention to detail, but from a just relation between detail and the form of the piece as a whole. The student must listen to his performance in the light of this principle. He must not pile one distorted phrase upon another, trusting to luck for the impression which the piece makes; he must feel page by page, or better still, with a clear mental image of the whole, strive to make his conception equally lucid, logical, and compelling in climax to his audience. The details will then assume their proper subordinate position, phrase will balance phrase, and section section; the climax will have its due emphasis. The real purpose of the interpreter is to illumine the inner meaning of the music. Unless the sincerity, the simple yet strong construction of the music, the definiteness of its purpose, is a part of his inner convictions, he cannot carry his audience with it. Seek to underline its message, and his work is done. For the student who has thought only of the comparatively superficial details of rhythm, technique, and accentuation of the individual phrase, this more comprehensive standpoint may at first seem difficult, if not impossible. Patient experiment, however, will prove its expedience, and practice will enlarge the mental perception.

VOICE QUERIES AND ANSWERS

MISS HELEN N.—Your question regarding breath control is one difficult to answer briefly.

Breath control is a matter of considerable study and thought; perhaps your being, as you say, "naturally short-winded," is due to some physical defect, or perhaps the altitude in which you live may not agree with you entirely. In either of these events the physician is the one you should refer to; but presuming that living five or six thousand feet above the level of the sea does not affect you, and that your general health is good, you should at once practice deep breathing in accordance with some systematic process, such, for instance, as is shown in L. A. Russell's booklet, *The Body and Breath under Control for Speech and Song*, which can be obtained either at the Ditson houses or of any first-class music dealer. In the meantime a simple process will be for you to stand erect, with the upper chest forward, shoulders and hips drawn comfortably back, so that the chest is the most prominent part of the body, then easily sigh, deep down, so that it seems as if you were breathing into the stomach. Do this several times, without heaving the upper chest, seeing to it that all action is by the lower thorax, affecting only the lower part of the body, the upper chest being held buoyantly high, without stiffness.

Repeat this slow, deep-down sighing several times; when you are sure that you are filling the entire lower lungs with slow practice, try the following exercise.

Always holding the chest high, sob deeply several times, always, as before, as if to the very stomach (this of course is merely a sensation caused by the pressure of the diaphragm against the stomach).

When you have learned to sob deep down, the next effort will be to seize the muscles at the lower part of the thorax, holding your breath an instant, then again sobbing three or four times, catch the breath upon the last sob and hold it there, while you count (mentally) five or ten, not too rapidly. As a final exercise breathe either with the deep sigh or the short repeated sob (deep down), seize the breath at the waist as before, and count aloud slowly, deliberately, with clear enunciation, 1-2-3-4-5. Again, two or three short sobs, and count in the same way to ten; when you can count ten comfortably, you may increase your number of countings, until gradually, from day to day, and from week to week, having increased your ability in this direction, you will be able to count about fifty or sixty with the metronome rate of one hundred and twenty per minute. The same exercise may be done reading aloud from a book, increasing the number of words or lines as you increase in power of breath control.

In all of this so briefly stated, mark the following conditions:—

The shoulders and hips must be free, never stiff. The breath must be supported at the waist, where you have seized it; the central point of this seizure is right over the pit of the stomach at the diaphragm, and the mind must so direct the effort as to bring about a perfectly easy control of breath-hold at this point; the sides and back always working in sympathy with this central point at the front of the diaphragm.

There must be nothing violent; you must so closely watch your movements as to gain a perfect control over the breath emission, that regardless of the degree of force with which you speak or sing, there will always be a perfectly even and deliberate breath flow. After practicing with speech apply the same principles to your songs.

Your physical practice at first is to gain all possible lung capacity through complete, full and deep breathing. Then you are training the muscles to control this breath, that you do not use at any time more than is needed. The body at any point surrounding the thorax should never suddenly collapse while one is singing or speaking.

This is but an imperfect statement of the several comprehensive processes of breath control in singing. The muscles must be trained by placing your thought upon the parts under cultivation, until finally the whole process is automatic, or as some say, "natural."

With you, however, to breathe naturally, according to your own report, is to be "short-winded"; cultivate a second nature according to the principles laid down here, and you will find that what you have called natural has not been completely so, but simply habitually so. You are now to change the habit of short top-lung breathing to the normal (proper), deep-down process, with mental control over the muscles which allow the taking in and pushing out of the breath (respiratory muscles). These processes are all fully explained in the book named above.

QUERIES AND ANSWERS

T. P.—"Do the two parts of Dr. Mason's *Pianoforte Technics* (revised by Mr. W. S. B. Mathews) contain all necessary matter towards a sound technical execution of the pianoforte? What will you recommend to follow these books?"

Dr. Mason's *Technics* is a complete manual of fundamental technics; if comprehensively applied from the beginning, it supplies practically the whole fundamental training in tone-production and passage perfection along the more usual keyboard tracks In my opinion the two-finger exercise remains an invaluable part of daily practice all through the piano-playing course; but when the scale work and arpeggio work have been systematically applied and mastered during a series of say six years or more, the pupil is or should be ready to continue his technical development by the use of Cramer, Chopin, Studies, and the Bach Clavier. I do not recommend other books of technics, although those by Tausig and Joseffy contain material which the concert player might find useful for special purposes.

In the later study of the pianoforte, technic as well as the playing generally rise above the exercise standpoint and tend to appeal to the art-sense. For this reason the diligent playing of a lot of Chopin, Schumann, Liszt, and Brahms is the main dependence of the advanced pianist.—W. S. B. M.

T. P.—"What is meant by playing shakes with the aid of the wrist?"

I could answer that better, perhaps, if I saw the original form of the statement mentioned; it may mean that curious concentration of hand which artists practice in making a very fast trill. Such a thing with them is considerably more than mere finger work. But I confess that this may or may not be the proper answer.—W. S. B. M.

T. P.—"Should studies be taken along with technical practice or come afterwards?"

It depends. Something always goes with technical practice—something musical. If the pupil has time to work at them all, three elements go together: technics, studies, and pieces; if one must be left out, it depends upon the condition of the pupil whether one would leave out technics or studies. Very rarely, indeed, and never unless the studies are musical, would pieces be left out entirely.—W. S. B. M.

MARIE.—You can do no better than to study carefully the three Manuals of Tapper's *Graded Course*. These will review all fundamentals and help you in teaching. For your own personal advancement Grades V, VI, and VII of Tapper's *Graded Course* and Mathew's *National Graded Course* will be of great assistance.

You should also read some standard works of music literature. Titles will be furnished in this column if you desire them.

THE LOST NOTE

A prominent musician recently told a little anecdote which will be appreciated by musicians, and perhaps by laymen as well.

He was teaching his young son the piano keyboard by the inductive system, and the boy, having learned all the notes, both white and black, the teacher began to review the lesson by asking, "And now, Henry, show me A♭."

Henry soon figured it out.

The next question was, "Where is G♯?"

That also proved easy.

After asking the boy several more questions about sharps and flats, the teacher said, "Where do you think we shall find C♭?"

Henry looked at the keyboard long and curiously; he put his finger on C, and next on B, then he got down close to the piano and after examining it carefully, replied, "I don't know, papa, but I guess it's gone down that crack between B and C."

AMERICAN AND ENGLISH LANGUAGES

"We speak American, but we understand English," a witty friend of mine once said to a visitor from the "old country." Englishmen, on the other hand, sometimes tell us they don't understand American. Dickens, for example, professed to have been puzzled by the waiter of the Tremont House, who asked him if he wanted dinner "right away."

A more common stumbling-block is the word "rare" applied to meat, in the sense of "underdone," which is its English equivalent. Matthew Arnold, one evening, in a post-prandial conversation, inquired how the word had come to be thus used. No satisfactory explanation being offered, he concluded that it had reference to the texture of the meat, as being, when lightly cooked, less dense or compressed than when thoroughly done. This was on the assumption that the word in this sense was derived from the Latin *rarus*. But it now appears that it was an old English form, hrer, and had a long history in the English language, but as an epithet applied to eggs; the first example of its application to meat given in the Oxford Dictionary bears date of 1784; and while in 1820 Charles Lamb could speak of "rare flesh" with the assurance of being understood, forty years later an English sportsman visiting the United States is struck by the unfamiliar term and pronounces it an Americanism. The emergence and submergence of words, or of use of words, is one of the great and often perplexing curiosities of language.

As a final instance of a difference of verbal usage which seems to require explanation I may cite the fact that what in England is called a "sanatorium" is in America as invariably termed a "sanitarium." Why this difference? How did it come about? Are both forms correct, and, if not, which of the two is incorrect? For an answer to the last question we must look at the derivation. "Sanatory," from *sanare*, to cure or heal, means conducive to health, restorative. "Sanitary," from *sanitas*, health, means pertaining to health.

The sanitary condition of a place is its condition, good or bad, as regards health, and the business of a sanitary commission is to investigate that condition and to improve it if necessary. It was probably the special familiarity with this phrase at the time of the Civil War which led to the adoption of "sanitarium" in the sense of "sanitorium." The word, if it have any real *raison d'être*, should mean an institution for investigating or suppressing conditions adverse to health, not a hospital or place of cure, which is properly a sanitorium.—*From Lippincott's Magazine.*

A NOTED FIFE PLAYER

J. Quincy Torrey, probably the oldest and most widely known fifer in the United States, and for many years a picturesque figure at South Weymouth, Mass., died recently at the summer home of his son at Sagamore Hill, Nantasket Beach, aged eighty-four years.

Mr. Torrey was born in South Weymouth in October, 1822, and he has always resided there. He was at one time a shoemaker by trade. Mr. Torrey was well known in musical circles. He began to play the fife in 1839 in South Weymouth as a member of a six-part band. He played with that band for many years and he also attended many of the old-time military matches in all parts of the State with a snare drummer as a partner.

In 1848 he joined the Weymouth band, and remained with it until it disbanded a few years ago. He was a member of the old Simpson drum corps of South Weymouth, and with it visited various parts of the country. He played in Boston at the memorial service for the first President Harrison, and also at the celebration at Yorktown, Va., one hundred years after the surrender to Washington. He also played for the Ancient and Honorable Artillery Company of Boston for many years.

Mr. Torrey made his last public appearance as a fifer in the last Fourth of July celebration at Fogg's Opera House, South Weymouth.

WALLACE GOODRICH

LOUIS C. ELSON

Wallace Goodrich belongs to the younger generation of American musicians, for he was born in Newton, Mass., May 27, 1871. He was the only child of Anna L. and John B. Goodrich, his father being a prominent lawyer of exceptional mental attainments. Both his parents were of old New England stock, his descent on the paternal side being from the earliest settlers in Watertown, Mass., in 1636.

We do not find the "youthful prodigy" element in the life of this musician, although he gave a powerful vocal exhibition at the font of the church while being baptized. It is said that the young Mozart shrieked at the sound of a trumpet; the young Goodrich became hysterical and rushed into a dark closet at the sound of a military band. But even in his juvenile years he had an ambition to play the church organ, and as his father was a friend of that brilliant organist, Eugene Thayer, the boy was placed under this musician's tuition when nine years of age. It soon became apparent, however, that preliminary study upon the piano was necessary, and Mr. Clouston, of Roxbury, became his teacher in this field for three years. After this, when twelve years of age, he was placed under the tuition of Carlyle Petersilia, under whom he worked faithfully for three years more.

That he acquired some degree of technique at this period is evidenced by the fact that he was able to play Liszt's *Hungarian Fantasie* in public, his teacher supporting at a second piano. But there were fortunately not many of these displays of precocity. His musical growth was to be more normal and natural. When fifteen years of age we find the young Goodrich returning to the organ. A position as organist in the Newton Baptist Church was offered to him, and although the early lessons from Thayer had long been obliterated by his earnest piano study and his knowledge of the instrument was now of the slightest, his friend, George C. Gow (since prominent as teacher at Vassar College, but at that time studying for the ministry), coached him so energetically that in eight days after the appointment was offered Goodrich played his first service.

Now the earnest organ study began and Henry M. Dunham, at the New England Conservatory of Music, became his teacher for three years. A more important position as organist soon followed, and for some years the young director had charge of the music in the Eliot Congregational Church, playing a much larger and finer instrument than before.

Now followed the higher reaches of musical education, and George W. Chadwick taught the aspiring young man harmony, and subsequently counterpoint. The Conservatory course in musical theory was added by the present writer. At this time Mr. Goodrich gave several organ recitals, and there was also some activity in the field of composition.

The young Goodrich's interest in orchestral work was first awakened by a Wagner Festival, given by Theodore Thomas, in Boston, in 1884. The lad was then attending high school in Newton, and he soon formed an orchestra in that institution. In spite of all this musical activity and study, the father still wished his son to choose the law as his profession, but when he saw how earnestly the young man entered into his musical work, he forebore to urge this (there was always the closest sympathy between the pair) and left nothing undone that could advance his lad in the career he had chosen. Therefore, soon after, we find the young Goodrich in Europe, accompanied by his mother, revelling in *Parsifal* at Bayreuth, and finally settling for the winter in Munich. Rheinberger has exerted an influence upon the American composers of the last quarter century beyond any other European, and Goodrich was soon one of his flock, studying organ, counterpoint, and composition with the great teacher and composer. There was also some study of conducting with Abel. At the end of the school year Goodrich conducted his own *Ave Maria* (chorus and orchestra) publicly and was awarded a silver medal for composition and organ playing.

The young American was constantly amid musical surroundings and friends. He was admitted to the coterie which contained Brahms, Leschetizsky and others; he traveled through Italy and France, and finally settled in Paris to study organ with that superb composer for the instrument, — Widor.

All this time there was the most earnest study of the Roman service, at St. Sulpice and other churches in Paris, as well as in Rome during Holy Week. After a brief return to America (*via* London), Goodrich went back, this time to Leipsic, where he became Repetitor at the Stadt-Theater. He now had an enormous amount of routine work, connected with opera and conducting, in Germany, of which he himself has written a most amusing account. He had intended to enter into operatic conductorship, but an offer of a prominent position in the New England Conservatory of Music, by George W. Chadwick, its new conductor, brought him to Boston permanently, in 1897. Since that time Mr. Goodrich has been a great and most wholesome influence in American music. He has taught organ and composition in the higher branches; he has become the regular organ soloist at the Boston Symphony concerts; he has organized a boy choir at Trinity Church. During Mr. Chadwick's sojourn in Europe (1905–6) Mr. Goodrich was acting director of the New England Conservatory of Music, — and a very efficient one. He has done some especially remarkable service in a field which is very little cultivated by founding a Choral Art Society, which performs the most difficult *a cappella* works of the old masters, the difficult compositions of Di Lasso, Palestrina, Gabrielli, etc.

He has also been of great influence in the domain of plain song. He has not only introduced this service in English, in America, but he has given instructive lectures upon the topic. He is probably the leading authority upon this subject in the United States.

Mr. Goodrich has been the conductor of the Worcester Festival Orchestra and Chorus for the last five years. He has found time also to translate valuable French works on Bach, the organ, and the Gregorian chant, and has written several essays on organ construction and playing.

Summing up, then, we find in this remarkable American musician the most versatile and yet the most thorough qualities. In opera, in orchestral leadership, in medieval and polyphonic music, he has won his spurs. He is gifted with tremendous magnetism and a strikingly noble presence. He is a "Notenfresser" as pronounced as Liszt was, being a sight-reader of the first class. He plays Bach with that modern feeling which the French import (properly) into his works. And he is thirty-five years old!

Surely such a man can go very far. He is a living contradiction to the opinion that the American composer is more superficial than the European. If his artistic growth of the last twelve years is equaled by the next twelve, there will be no name on the scroll of American musical fame that will stand higher than that of Wallace Goodrich.

THINKING SOUND

To acquire the habit of thinking musical sounds, as one does letters and words, is not a difficult task; in fact, to one who undertakes it seriously there is no difficulty greater than that of learning to read literature. The usual method of tuition which teaches the pupil to regard this, that, or the other note as identical with certain positions on his instrument, is not one best calculated to make him an efficient and intelligent reader. He never attains to independence in musical thought, but must ever refer to his instrument before he can form a fairly accurate conception of the musical story that lies silent on the page before him. I have known many professional musicians who, beyond the capacity to grasp the rhythmic outline of a composition, could form only the vaguest kind of an idea of what it, as a whole, would sound like. The rise and fall of notes conveyed to them the idea of a corresponding rise and fall of pitch, but that was all. To think of those undulations in their tonal relation one to the other, or to the key-note; to trace the motive through its evolutions to the accomplishment of its destiny in the final cadence was utterly beyond their capacity. And yet, as a child may learn to read the alphabet, to form letters into words, and thence to sentences, and so on, just so may the music student learn to combine and use the notes before him.

Strange as it may appear, the study of reading music may be carried on mentally. For instance, while I think of a melody, my mind traces its flow, and all the paraphernalia of the staff and notation appear as the melody passes away into time. I realize the clef, time and key signatures, bar lines, rhythmic divisions, and in a moment I transfer the thought to paper. People in general are accustomed to the transference of their ordinary thoughts to paper and by constant practice the labor of transmittal from brain to paper is minimized so greatly as to appear almost automatic in performance. Whatever of laborious effort appears in the process of writing music is the result of want of practice and not that the same is really or intrinsically more difficult than the former or demands any greater mental or manual effort. The mind is here master and directs the operations of the hand; and both gain facility from the practice which comes of thinking music.

THE POWER OF MUSIC

It enters into the heart and soul and molds the character of man.

CAPTAIN OSCAR HATCH HAWLEY

Although the youngest of the arts, music now, without question, takes precedence over all others in its effects on the subliminal self. There is no human creature who is not more or less affected by music and, in a general way of speaking, the higher the type of man the greater is the effect of music on him.

Savages do not care for the music of civilization and to primitive man the beat of the tom-tom and the shrill note of the reed pipe is sweeter than the grandest harmonies of the master symphonists. On the other hand, there is no music (for civilized man) in the discordant cacophony of the aborigines and not much more that is pleasing in monotonous droning and thumping of the semi-civilized tribes.

Hence it is easy to perceive that music, if it is to have any effect for good, must be such as will be pleasing to the listener.

Between barbarism and civilization there is a long step, and among civilized people the world over there is but one standard of what is good, and this standard has not been fixed by any set of commissioners sitting in committee to decide what was good and what was bad. The standard fixed itself and was the gradual outgrowth of advancing civilization in all quarters of the globe.

The one common standard is the scale, thirteen semi-tones, or twelve semi-tones, and the octave, and that is the standard of music wherever the people have risen from barbarism.

There is no similarity between the music of the Italians and the music of the Russians, and these two types of music are easily distinguished from English music. The music of Germany, France, and Spain is entirely dissimilar; and no one could mistake the weird and rugged harmonies of the Norwegian for those of a composer reared in the languorous clime of Italy or Spain.

And yet with all this dissimilarity there is one feature common to all, and that is the scale and the general fundamental principles on which all music is written. So it is that people from this country can well appreciate the beauty of music from any civilized quarter of the globe, but can make nothing out of the hideous noises of the barbarians.

In this connection it might be well to note that in China, where discord seems to be the acme of musical intelligence, the theory of our scale is well known and has been in use for untold centuries. The theoretical musicians of the Celestial empire write a deal of beautiful and weird music in the scale so well known to our ears, but it is never played in China. The great masses of the people there do not understand nor comprehend its majesty and it has fallen into disuse.

But in this country, and other countries which are making strides in civilization, we find music keeping pace with all the rest, and beautiful harmonies, majestic chords, being used over and over again for the uplifting and advancement of the world. From all of which it may be gathered that the degree of musical intelligence exhibited by people is good indication of the degree of education and refinement, yes, the spiritual advancement, made by that people.

The statement made above, that music has a greater effect on the subliminal self than any other of the arts, may be questioned; but let us consider the matter in all its bearings and see if the truth of the proposition is not easily established. Music is emotional, while all other art is intellectual. Do not understand by this that there is no intellect in music. What this statement is expected to convey to your mind is that music portrays emotions only. There is never an idea, never a thought, in music. The composer may have spent days, weeks, months, and even years in the production of a piece of music. To him it has been a great intellectual effort and to those who take part in its production there is more intellectual effort, but the whole effect of the composition on the listener is emotional. To the audience in attendance on a concert no great degree of mental effort is required because there is nothing for the audience to follow but plain and subtile harmonies. They are enjoying an emotional feast, whereas, if they were at a lecture, it would be an intellectual treat.

It is because of the fact that music is emotional that it has such a power for good or evil. And it is because of this same fact that music is the most potent of all the arts in shaping the course of human destinies.

There are, perhaps, those of you who would give first place to literature, painting, sculpture, or the drama and you have very good reasons for your choice until you have delved deeply into the psychic side of music. All other arts have had and will continue to have great influence over the masses of mankind, but no such influence as is wielded by music, for in none of the other arts are there those insidious nuances that steal unawares into the soul and mold the character, influence the innermost being by the play upon the emotions.

For the emotions, you know, control our lives and actions. Do not imagine for an instant that we are controlled by our intellects, for that is a premise that will lead you far astray. The emotions, the feelings, are the controllers of our daily acts, and were it not for the emotions, life would be one dull round of duty, almost a colorless existence. Our intellect is, of course, a great help in guiding us aright, but most of our acts are based on our feelings. Orators, lawyers, priests, all men whose business it is to influence others, know this, and their appeal is always made to the emotions. They, of course, state facts to give the intellects of the listeners some basis to work on, but when the great appeal is made it is to the emotions, and to the emotions alone.

In music there is no statement of fact, at least not to the average listener. There is only a direct appeal to the emotions, and by delicate shading, soft cadence, swelling chorus, and thunderous climax, a play on the feelings of the listener that has its effect as surely as a draught of the nectar of the gods, and is powerful or otherwise in strict keeping with the deep or light development of themes and motives.

Poetry expresses a thought, sculpture an idea, painting an allegory or a scene from life, the drama tells a story. Each of these forms of art create emotion and through some of them very deep feelings are aroused. But with them the first appeal is to the intellect.

Music, on the contrary, expresses only an emotion, and in so doing does for humanity what no other art can attempt. What language has wealth of vocabulary sufficient to voice the emotions? What canvas, with its array of soft colors, dim backgrounds, and vague shadows can picture the mental exaltation of the artist? What group of cold marble can portray the soul of the sculptor? So, on music devolves the task of portraying the heart throbs of the musician, the artist, the composer.

We all have feelings more or less akin. We have our joys, our sorrows, our trials, and our tribulations. Sometimes we tell them to one another, but we can never make ourselves understood. We are glad of a sympathetic ear into which to pour our tale of trouble, but we are never fully satisfied with the result. There is always something lacking. We have not expressed ourselves just as we would like to have done or our friend has not exactly grasped the great point in what we are trying to convey. But we hear good music and at once feel better. We feel that it is some one telling for us the very things we would say. It matters not what the composition is, as long as it is good music, we are satisfied with it and after listening to it take our way along life's road with a feeling that a great burden has been lifted from us, that we are happier and better and that, after all, the world holds much that is in sympathy with us.

Knowing that the emotions control our lives and that music is emotional only, you will at once comprehend the tremendous significance of this art in its application to our daily existence.

That music has a power for evil as well as for good has been recognized by poets, philosophers, and sages since the beginning of recorded history. In the *Odyssey* of Homer you may read the legend of the sirens, those sea maidens with voices so sweet that none who heard them had power to resist, but were drawn to destruction on the island which the maidens inhabited. As near as we can judge the *Odyssey* was written about three thousand years ago, so it is quite evident that even in that long time the power of music for evil was well known.

About the same time that Homer was writing the *Odyssey*, David the Beloved was writing the Psalms, and throughout them there is reference to the worship of God through the use of music. David says, "Let us sing unto the Lord a new song," "let us praise Him on a thousand harps," "sing unto Him with psaltry and on an instrument of ten strings," and there are dozens of other references to music in the Psalms, from which it would appear that the power of music for good was also well known some three thousand years ago.

As music was such a power, and as the influence was good or evil (depending on the character of the music), the Church, many centuries ago, stepped in and took charge of matters musical. It was decreed that music of a certain style only should be written and that only certain styles of music should be sung. Thus there grew up in the Church a class of musicians whose composition breathed of spirituality. The men themselves may not have lived such blameless lives, but into the music which they wrote they put only those emotions which they might have felt when making a struggle for the better and the grander life. And thus through music the people were inspired to higher things. So it comes about that the Church has been the father of good music and all the great composers have put their greatest efforts into the production of music for Church use. The passion music of Bach was written for the Church, as were all the wonderful preludes and fugues of this great genius. The masses of Mozart, the requiems of Beethoven and Brahms, the oratorios of Handel and Haydn, were composed for the Church and are the great things by which these composers are remembered. They wrote many other things (symphonies, quartets, sonatas, choruses), but never anything that could not be given in church.

But in the development of music there arose a school of sophists who made bold to announce that the sphere of music was too narrow, that it should be made to depict all emotions, as in art there could be nothing that was bad in itself. Was ever greater piece of sophistry propounded? We well know that in all art there is a line of demarcation so sharply defined that only those who are leaning towards the side of the sophist are unable to locate it. We know that all the poetry of Byron is not art, we know that all the paintings of Turner are not art, we know that much of the sculpture of St. Gaudens has been forbidden place in public gardens because it is not art.

And so it is with music. As yet we have no higher court decreeing that certain kinds of music shall not be publicly performed, but the Church recognizes the evil influence of certain kinds of music by stepping in and prohibiting its use in church. There are certain kinds of music that may be given in church and those kinds are the same to-day as they were three hundred years ago in the time of Bach.

Handel, Haydn, Bach, Beethoven, and composers of that stamp never wrote a line of music that could not be performed in church. But there have been a great many other composers who have decried the work of the masters and who have given the world so-called tone poems in which they reveled in sensuous harmonies and banal, but sweet cadences. These works of the sophists have been foisted on the public under the guise of art, and as such accepted by the public; but to the musician and the thinker these works speak the degeneracy of their makers as surely as did the vapid effusions of the Pompeiian poets in the latter days of that ill-fated city.

The influence of this school has not been felt by the giants in music. It had no effect on Brahms or on Tschaikowsky, or Mendelssohn, or a score of other composers who wrote music that has made the world better. And what has become of sophists? Do you ever hear of them these days? Are their names ever seen on modern programs? Has their music lived? Has it influenced more than the fleeting crowd of pleasure-seekers? Has it left its mark on the record of civilization?

And so it will be well for you lovers of music to seek out that which is good if you would get lasting pleasure out of it. Do not decry all modern music nor all popular music.

Some of it is good and most of it is harmless at the worst, but it is not the kind of music that is going to broaden your mind, develop your soul, and make you feel that life holds more than the pleasures of the hour. If you are going to listen to music have it such music as will help you in your everyday life, have it good music, pure music in which there is no suggestion of evil.

And do you say that you do not know good music from bad? There is one sure and unfailing indication, and if you follow it you cannot go far astray. You have heard that a man is known by the company he keeps. It is the same with music. Absolute music (that is, music which is not written to words) seldom has a suggestion of the impure in it. But all music which has been written to words must forever be associated with those words, and the effect on the listener will be that of the words and music combined, no matter if it is given an instrumental performance only. So, if you happen to know of music that has been written in opera of the decadent type, or of music that has been set to words of the decadent sort, that is the kind of music that will do you no good. Be discriminating in what you sing or play or in what you listen to, and continually try to advance yourself in musical knowledge and feeling, for every advance you make in music will be to your soul's welfare.

At the beginning of this paper I said that music had a greater influence on human destinies through the subliminal self than any of the other arts. I want to refer again to the emotions, because music affects our emotions alone.

Through the emotions we become highly exalted or deeply depressed, depending on the emotional significance of that which had been the excitant. But depression never follows the feast of good music. The feelings may be greatly wrought up by that which has been heard, the profoundest depths of the being may have been stirred, tears may flow; but there is no sorrow, no depression, only a feeling of higher exaltation, of closer kinship with the great God above.

The influence of music is greatest when least considered, for it is then that it enters your very heart and soul and molds the character. Good music can have but one effect on those who listen to it, and music of the decadent type has the opposite effect just as surely as there is good and evil in music. With most of us the influence of music is one that extends over the whole course of our lives. It begins at the cradle, when the mother hums a lullaby and rocks her babe to rest; it continues through childhood in the songs of the Sunday-school; it is with the young people in all their entertainments and with the older ones in their daily lives. It compasses the whole category of human emotions and fills with brightness many lives that might otherwise be merged in gloom.

Music is the great influence, the grand influence, and we cannot place too high an estimate on its powers for good. We know not all the good it does and we cannot measure its results. But we know it is with us always, from the cradle to the grave, and even beyond, for, when the last word has been said, the last psalm sung, the exalted soul, released from its earthly habitation, is borne to the throne of grace on the swelling cadence of the requiem.

REDEEM YOUR PAST FAILURES

You may say that you have failed too often, that there is no use in trying, that it is impossible for you to succeed, and that you have fallen too often even to attempt to get on your feet again. Nonsense! There is no failure for a man whose spirit is unconquered. No matter how late the hour or how many and repeated his failures, success is still possible. The evolution of Scrooge, the miser, in the closing years of his life, from a hard, narrow, heartless money grubber, whose soul was imprisoned in his shining heap of hoarded gold, to a generous, genial lover of his kind, is no mere myth of Dickens' brain. Time and again, in the history of our daily lives, chronicled in our newspapers, recorded in biographies, or exhibited before our eyes, we see men and women redeeming past failures, rising up out of the stupor of discouragement and boldly turning face forward once more. — O. S. MARDEN *in Success.*

SONG ANALYSIS

KARLETON HACKETT

Who is Sylvia? by Schubert, is a song of such exquisite beauty that all the torturing it has received during the last century has not sufficed to dim its freshness. It is one of the dozen or so songs from the classic repertory that everybody knows, consequently almost every one who sings it seeks to give some new interpretation, with the inevitable result that its true character, perfect simplicity, and unbroken melodic flow is fast disappearing from our concert halls. First of all in this song and in most songs that reach towards perfect beauty, is the rhythm. From the first note of the accompaniment to the last there should be scarcely a variation of the original tempo, except that the entire last verse is to be taken slightly faster than the first two, but no heavy ritardando anywhere, only an elastic, even, rhythmic flow of melody. More than any other song writer Schubert seemed impregnated with the spirit of the melody of the human voice, and the vast majority of his songs only reveal their inmost beauties when the singer has that poise of voice which the Italians called *bel canto. Who is Sylvia?* is one of the best examples of melody for the human voice; there is no place for declamation nor dramatic climax, the meaning of the words must be made clear by that tone of sustained beauty, which sounds so easy but is in fact the apex of vocal skill. Only those attempt "*dramatic*" effects in this song who realize their inability to "*sing*" it.

Wherever it is possible to find an adequate English translation of a song written in a foreign tongue it should always be chosen, when the song is to be sung to English speaking people; and when the original words — as in this case — are English, there is no possibility of dispute. One reason why many vocalists choose to sing in foreign languages is that by this means they conceal their poor enunciation; for since the audience does not know the language, it cannot tell whether or not it is clearly spoken. But to know what the song is about is one of the greatest pleasures in listening to singing; so, if the singer cannot or will not sing good, comprehensible English, let him make way for some one who can. The accompaniment is of equal importance with the voice, and if it be dragging or clumsy, or anything but clear, firm, and in absolute sympathy with the voice, the song is a failure. The right hand should be played even, sustained, and legato; the melody of the left hand crisp and staccato, not too loud, but always firm. The two phrases in each verse where the left hand in the treble clef answers a vocal phrase must be legato, but strongly accented on the first note. The tempo should be a moderate andantino; metronome indications are unsatisfactory, but neither drag nor hurry, take a good swinging rhythm and keep it.

The phrases are so adequately constructed for singing that there is scarcely a place where the question of breathing need to bother. Like all sustained vocal phrases, they should begin quietly, swell to a full tone with an accent in the middle and die away at the close. The first phrase should begin softly, then let the tone swell until it comes pretty full on the first syllable of "Sylvia," and then diminish to the end of the phrase. This does not mean to begin as softly as you can, then make as much of a crescendo as possible, but that the tone shall be increased more on the accent in the middle of the phrase than at the beginning or close, — which is true of all sustained singing. Just how softly each phrase should begin, and how much of a crescendo should follow, is a question of artistic feeling that one learns only by years of study and observation; for artists are not *made to order*, they grow into existence partly by what is taught them, partly from their inner consciousness. The melody of the song is so spontaneous, the harmonic structure so simple, that the young student often feels that he can take the whole thing in at a glance, and that there is hardly anything to work on. Supposing that his tone production is good enough to warrant his attempting the song, when he really begins to study he will find it work enough to make the rhythm easy and flowing, and the words perfectly clear. In regard to the words, one error in the usual editions is to be noticed; "adored" at the end of the first verse should be "admired," and of course the last syllable to be pronounced as in all old English. It is not enough — in fact it is nothing — to sing the song in strict time; the values of the notes must be accurate, but the singer should pass on through this to rhythmic accent, where the angles of mere accuracy have been softened into a flow of melody. The values must be right, but it ought not to jerk around any corners. The accented beat and the accented syllable coincide, and the tone should have the most volume on the accent in the middle of the phrase. "Who is Sylvia?" is the phrase, yet about nine young singers out of ten give it: Who is Sylvia? — and so on to the end, which is ridiculous. A pure tone, a flowing, accented rhythm; an understanding and distinct speaking of the words, — these are all that the interpretation of this song demands. How many singers have them? Simplicity is the key-note, so to speak, and the song as Schubert wrote it needs no "dressing up."

An excellent song for teaching sustained tone and distinct enunciation is *Absent*, by Metcalf; also a grateful song on the concert stage. The ability to sustain a simple, melodic phrase is the basis of all good singing, and it depends on the method of tone production whether this be one of the easiest, most natural things in the world, or the thing that you most dread. If you know something about the free, unconstrained breath flow, it is easy; if your breathing is awkward, so that the muscles are tense and strained, the tone will be stiff and unmusical, hard to make and not pleasant to hear. The first principle of singing is to take a good breath and then be willing to let it come freely. Most young singers make their pathway unnecessarily rough by trying to have the breath last too long, trying to sing too long a phrase. Always breathe before you are forced to, study your phrases so that you know how far you can go with comfort, and always plan to reach a new breathing place while you still have abundance of breath. Long phrases may come later; the young singer has no business with them, and the old artists use them but sparingly for special effects.

The phrases in this song are very simple, but just long enough so that only an artist can sing them properly on one breath. In the first phrase, breathe after the word "shadows," and as this again is a sustained melody, there should be a gentle crescendo in the first part and a diminuendo towards the end. While the time is very simple and the accompaniment light, the best effect depends on giving the even values to the notes. In a song of this kind there is a great temptation to drag the time and make effects by holding certain tones, *but don't do it.* It is ineffective at best and teaches you bad habits. Keep in mind that if you are to become a singer, accuracy and rhythm must be made a part of your inmost thought. Then if you have a good breath, are willing to use it freely, know where you are to take the next one, feel sure of the rhythm, then give your mind to speaking the words distinctly without stopping the flow of the tone. This is a life-long study, but it can be done. Sustained, legato singing depends on good tone production, which is another way of saying an even, free breath flow. As has been said many times, it is much easier to sing well than to sing poorly. To sing properly you must be free, elastic, comfortable in mind and body; to sing badly, you must stiffen and strain, making trouble for yourself and all your friends. Don't try — don't make an effort; do it as easily as you can. As a rule, the harder you try the worse you do. It is not strain that makes singing, it is poise, equilibrium. When you have the physical structure of the song clear in your mind, — notes, time, rests, accent, breathing places; then sing the words as though they meant something to you. Sing it simply and quietly, without trying to make any "effects," but to see how easily you can do it. Later, you will discover a great law of tone production, that the easiest tone you can make is always the best tone. No matter what you may be trying to do, or think you are doing, if you are conscious of strain when you sing, it is not good. Almost all young singers use too much tone, sing too loud; it is a mistake. Voices are judged as other things are, by the *quality.* If you make a beautiful tone, you sing; if otherwise — good-by; nobody cares for it. So with a calm spirit sing this song as easily as you can, make the rhythm clear, and enunciate the words distinctly. If you do this, it is the beginning of interpretation.

ON THE VALUE OF MECHANICAL MUSIC

CARROLL BRENT CHILTON

A noteworthy section of the Prospectus (recently issued) of the Institute of Musical Art (Betty Loeb Foundation, Frank Damrosch, director) describes a new department, one now coming to form a standard part of the work of every music school and every institution where the art of music is in any way covered, — a regular course in "How to listen to Music."

"Instruction in this course (we quote from the Prospectus), which is designed for persons who wish to increase their capacity for musical enjoyment without making a practical study of the art, will be given through lectures, all of which will be illustrated by the performance of music of the highest and most representative kind. It is not enough to read about music, or hear about it, or even to hear it in a purposeless way. It must be heard intelligently to be fully appreciated; and it is the purpose of this course to teach students to listen intelligently."

The outline of subjects here follows: —

The Elements of Music (Rhythm, Melody, Harmony).

Rudiments of Musical Form.

Folk Song and Art Song.

Motets, Part-songs, Madrigals, etc.

Dance Forms: the Minuet, Gavotte, Allemande, Gigue, etc.

Suite, Sonata, Symphony, Symphonic Poem.

Absolute Music and Program Music.

A Significant Step

This is the first announcement of this character which has appeared in any circular of a conservatory of music, known to us, and shows what has long been predicted. All lovers of music may not be enabled or inclined to study the theory or practice of musical art, yet all desire to become intelligent listeners and appreciators.

Some provision, therefore, for the training of the average man or woman in these things was inevitable, not only because music was peculiarly suitable to become a part of every one's general education, but because the very life of the art itself depends upon intelligent auditors.

Rubinstein thought that sixty per cent of the Germans understood music instinctively, thirty per cent of the French, and eighteen per cent of the English. By inclination, Americans should stand well up in this list; but candor would compel the impartial observer to record that we can boast a percentage no higher than the English, if as high. Of course, genuine artistic progress is impossible until the great standard works of art in music have penetrated the general mind, to form a basis for further advance.

For this sort of education (and perhaps the only remedy) we turn to the intensely practical little implement of the type now known generally as the Pianola.

Without labor and uncomplainingly, the *chef d'œuvres* of music, forming the musical heritage of the world, may be reproduced at will, and over and over again, till they penetrate the mind. Oratorios, quartets, sonatas, symphonies, overtures, operas, always ready for the varying moods of musical man in his own home. *Music in the home has made Germany the leading nation in music.*

As every one knows, reading may be creative as well as merely receptive; indeed, it may be doubted if there is any such thing as *mere* receptivity. In this new method of *reading music aloud* the original and personal judgments of each listener are called forth.

Perhaps the secret good of the new device, and the explanation of its immense vogue in homes and schools throughout the world to-day, is here; namely, that *the observation of hundreds of great works stimulates the faculty of independent personal judgment.*

Many whose musical education has been frustrated or never started are now awakened and made aware of their own slumbering musical sense, and become truly musical in fact. Now, for the first time, they come, as it were, in to that part of their human heritage, — a discovery always made with joy.

In every art it is the same, — contact with the masterpieces and saturation with their spirit is the first and last aim of study for the average human.

It follows that being musical has nothing to do with the arts of grammar and performance — important as these are to the specialists. It consists, primarily, of sensibility. Are you able to turn on in your mind a flood of beautiful sound? How far are you able, by dirigation alone, to review your impressions of the music you have heard?

A person who had read *Hamlet* or *Lear*, and had once "plucked out the heart of the mystery," could hardly be said to have any true knowledge of their experience if unable to recall the leading ideas and motives and moods of the play.

Nor could a person be said to be musical who could not give some account of his excursions into the tone world. How few can render this account!

It could even be shown that devoted concert goers in large centres are lacking in this respect, since it is not simply hearing good music that lets us into its secret, but hearing good music *repeated* till we are thoroughly at home with it. Generally we require at the start the interpretation of an imaginative mind. Like the drama of life itself, which without experience is only inexplicable dumb show and noise, the uninitiated auditor at a quartet concert gets sensuous impressions only. He must have the bill of the play in his head and be thoroughly familiar with what is going on, if he would understand it.

For the mass of men great art needs interpretation. Here and there, perhaps, may be found an individual with sensibilities so exquisitely attuned as to be able to sense the merit of great music even from the beginning of artistic experiences. But most of us, I fear, require to be led sympathetically into the presence chamber of Art, before we can learn to perceive for ourselves the merits of the things which are excellent.

For variety's sake and other reasons, the Kneisel Quartet or the Boston Symphony Orchestra *never repeat* a quartet or symphony in the same season. From the standpoint of tone familiarity it is easy to see that *one might listen to a lifetime of these great performances without ever getting to know one work intimately.* What a loss! when all these histrionic performances are thrown away, as it were, in missionary work to make the compositions known, which are not yet known at last, unless concert hall experiences are supplemented by home study. If these statements are doubted, ask any regular attendant of these concerts to give you some account of the themes and spirit of, say, six *leading quartets* played by the Kneisel Quartet: —

Beethoven — F major, Op. 59, No. 1.
Beethoven — C♯ minor, Op. 131.
Mozart — C major Quartet.
Mozart — B♭ major Quartet.
Haydn — C major Quartet.
Schumann — Op. 44, No. 3.

or of the following standards in the repertory of the Boston Symphony Orchestra: —

Beethoven — A major (Seventh) Symphony.
Mozart — G minor Symphony.
Schubert — C major Symphony.
Brahms — C minor Symphony.
Haydn — E♭ major Symphony.
Mendelssohn — Scotch Symphony.

No royal road to the comprehension of these works has yet been found, but to hear them again and again at intervals of time *not too far apart for the impressions to become cumulative*, together with a competent guide to their understanding.

Startling as may appear the feats of the Pianola, in nothing is its power more remarkable than in its ability to reproduce for us the living lineaments of works like these, *repeatedly*, so that we may observe every detail of the composition and fix it firmly in the mind. When combined with the study of the orchestral score and explanatory text, the function of this reproducing instrument becomes truly indispensable, since it *is literally the only practical means (ordinarily obtainable) of becoming truly familiar with the standard works* in each department. True, some works are better adapted than others to successful reproduction in this manner. The same is true of all art reproduction.

From the least effective we yet receive an impression of the original, valuable in some degree as enabling us to know what the work is.

Considering the slow pace at which educational innovations are apt to move, the prompt adoption of the new laboratory means in music is significant.

At Harvard University, at Columbia, at Vassar, and forty leading educational institutions, the pianola is now a regular part of the teaching equipment, and performs a remarkable service. No longer do students of harmony, form, musical history, and composition deal with dead formulas and abstractions. First-hand knowledge of these factors *as embodied in actual musical compositions* is early instilled into the mind to become the necessary base for further study.

It is significant that the students take to the new idea with avidity, and it seems certain that the opportunity of getting into actual contact with the treasures of music is rapidly advancing the standard of taste and raising the estimation in which music is held by educators.

STANDPOINT OF THESE LETTERS TO TEACHERS

W. S. B. MATHEWS

With the present issue of THE MUSICIAN I begin some *Letters to Teachers* for discussing any practical questions proposed, relating to piano playing, piano teaching, or piano music. In these answers there will always be a "personal equation," which the reader must add to or subtract from the apparent solution to get the true result. That equation consists of two preoccupations of mind, under which the answers will always be written, more or less, namely: first, that on the whole Mason's *Technics* (revised edition) covers more technical ground for elementary piano playing than any other book as yet published. This notion of mine is a growth of almost forty years' experience in teaching and of familiarity with the principles and materials of the Mason system. The idea may be unsound and out of date; if it be so, I have not found it out.

The second preoccupation of mind underlying these answers is that the publishers of this periodical, the old and highly honored house of the Oliver Ditson Company, having lately, at very large expense, issued a collection of *Graded Studies* by that active musician and litterateur, Thomas Tapper, his collection naturally takes precedence in these columns over any others, whether old or newer. The reader, therefore, will kindly modify what I say, in the light of this honest confession of what may be to him a higher light or an undesirable limitation, according to his own personal equation. Nevertheless, all answers will be according to the usual obligation of the witness stand, "the truth, the whole truth, and nothing but the truth," to the extent that the writer is ready to sign his name to it.

Piano Technics a Question of the How? Rather than the What?

All books of piano technics consist largely of the same practice-forms, mostly scales, arpeggios, broken chords, and five-finger exercises. From this it follows either that they are of substantially equal value, or else some one or more must have something new to propose concerning the treatment of these standard keyboard tracks. This is precisely what happens with Mason. The scales, for instance, in his book are shown in a very large variety of methods of treatment, concerning which all other technics are silent, or merely suggest such variety of treatment in passing. Mason, alone, provides the young pianist with a variety of scale treatments, such as artists use in their own practice. It is the same with his arpeggios, where the variety of arpeggio tracks is immensely larger than anybody else affords, and still more astonishingly rich in modes of treatment.

Despite the very large place speed, fluency, and power play in all music of tempestuous moods, and the great place still remaining for merely elegant piano playing, as such (*e.g.*, the first study in Chopin's Opus 25), tone quality and tone color remain the highest possible accomplishments in piano playing, whether they be applied to concert music, art music, or merely to those elegant Tupperisms of the drawing-room, in which amateurs take so much delight. It is always a question of the How?

The Mason system is the only one, or the next but one, which undertakes to provide all these methods of tone production which color the tone and vary it in expression. All others take it for granted and give no attention to it. All but one, that of Leschetizsky.

The Difficulty of doing Exercises Completely Well

Very few teachers understand what a long time an important technical exercise or method takes before its usefulness is exhausted by the pupil. Perhaps the most striking illustration of this is afforded by that remarkable tone exercise of Leschetizsky. He begins with a five-finger position, five keys held down, under conditions which he carefully states. Then he repeats one tone, slowly, the finger not leaving contact with the ivory, and the tones as closely connected as a repeated tone can be, practically legato, the player being taught to listen for this closeness of repetition. And this each finger does in turn and each hand.

Later on, a rhythmic table is made, by playing in the same way a single repeated tone (always holding the other four) in quarters, eighths, sixteenths, etc., in perfect rhythm. It is a very difficult thing to do.

A little later he begins the repetition pianissimo and rises to fortissimo within eight tones, and back again to pianissimo in the same number. Still later, the opposite fingers of each hand do the same kind of things together.

Now here is the curious thing, which contains the moral of this lesson: The music I have mentioned might all be written sufficiently well upon two lines; yet Victor Heinze, one of the best Leschetizsky pupils I have met, tells me that these young piano virtuosi who go to Leschetizsky require *two years* to complete the exercise I have just described, to the satisfaction of the master.

And what is it they have when they are done? First of all that habit which we neglect in teaching, the habit, namely, of listening to tone, of conceiving the tone before producing it, and of listening to it when the finger has made it to discover whether it corresponds to its idea. This for legato, for power, and for delicate gradation of power, the ear becoming more and more sensitive as the fingers gain in responsiveness. This is the secret of the Leschetizsky tone in artistic interpretation; the pupils are able to grade tones delicately under the most severe handicap possible, that, namely, when the four fingers are holding keys and only the playing finger is able to move. With this resource a pianist passes triumphantly over a thousand delicate places where the common player fails.

While I do not think any one piano exercise contains everything, I doubt whether there is a single exercise which has in it so much as this one; but it is not for the young player, the handicap is too severe. Better first master the tone productions of the Mason system, which lead in the early stages to much quicker results; then, later on, add this one and work it out to the end.

When a young player fails to do what the music requires, it is always a question as to the source of the failure. Whether it is a weak finger, a careless ear, or a mind which does not grasp the idea in its completeness; or a playing habit which has not yet reached mature development, although each element has made a beginning. The old technics failed terribly in not doing anything with the passage forms they set up for practice. No matter how empty the music, passage forms are never such as the technic books give us, always excepting that of Mason. When a scale is repeated it is always repeated in rhythm; its tones have a definite mathematical relation to the other tones in the same connection. This involves mental computations which, with many students, have to be built up, especially when the number sense is weak.

Merely thinking a thing is by no means the same pianistically as doing it, but it is an indispensable prerequisite to doing it well. Tone thinking will never arise in average students, unless the exercise and practice have a reason for the thinking. The mind of the child is very easily diverted from any focus of attention; Mason suggests ways of keeping it concentrated.

This, also, Leschetizsky does in his varied treatments of tone exercise already mentioned. The old timer, who like Dr. Mason in his youth, used to read a novel while engaged in the "alleged" practice of five-finger exercises, did not practice; the mental element of practice was lacking. Now the Think is curiously related to the Thing, as you see immediately you spell it. Our letters to teachers will always try and keep fast hold of the Think, as well as that great elixir of life of German philosophy, the "Thing-in-Itself."

And in these letters, the "Thing-in-Itself" is the art of piano playing; as Art, for the musical satisfaction of the player, and of those whom he would edify. When this is in the net result, it is good as far as it goes; when this is lacking, it is, as Saint Paul described it, merely a "sounding brass and a tinkling cymbal."

This I know to have been Mason's idea; and this I believe to have been that of Mr. Tapper; this is also my idea. Let us pass it along. It is a good thing.

MUSICAL JUSTICE TO THE BOY

W. F. GATES

One feature the teacher will do well to add to his musical propaganda is impressing on parents the advisability of giving something of a musical education to the boys. It is too commonly understood that music is feminine. The old classicists gave her this gender and all writers have copied them. Collins writes, "Music, sphere-descended maid"; Shakespeare says, "Music with her silver sound"; Pope alleges, "Music her soft assuasive voice applies," and the boys have had to suffer for it ever since.

If the artistic culture that is supposed to come from the study of music is good for anything at all, why should it not be given where there will be the greater lack of finer influences through life? The girl is gentle, loves beauty, naturally tends more to the esthetic than the boy. Why, then, urge her to the study of music and warn the boy away?

The lad is hastened through his school days, rushed into an office or factory or a profession, and emerges into middle life an Indian — as far as any artistic appreciation is concerned. He marries a girl who has had more or less of musical training, but he has no appreciation for her music and she has no incentive to continue it. Soon it is dropped and the new generation learns only the record of "what the mother used to do before she was married."

Not one boy in ten thousand has the natural gifts that make it advisable to educate him for the musical profession; but every boy has an esthetic germ in him that can be developed by vocal study or that of some instrument. This has an influence on his whole life. He will derive more pleasure from all forms of beauty with which he comes into contact; he will appreciate the musical efforts of people more talented than himself; he will take an enjoyment in music in his home, when he comes to be the head of one; he will transmit to the next generation an artistic impulse that might result in great things.

Many of the greatest musicians have sprung from fathers whose musical abilities were only moderate. The parents of Beethoven, Schumann, Schubert, Mendelssohn, Handel, Chopin, Liszt, Paganini, Wagner, Verdi, Weber, Rossini, Tschaikowsky, Paderewski, and scores of other great musicians were unknown to the musical world — men of small musical talents or none. But all of these were raised in an artistic atmosphere, most of them having their musical talents appreciated and fostered at home.

It is seldom from a great musical genius a greater springs. Music is like a flower. It blossoms slowly in the human family, opens to a sudden expansion of genius — and dies over night. What one of the great composers had a son that had a tithe of his genius? The great musician must come from a home of perhaps moderate talent but of appreciation for art.

Therefore give the boy a chance. A chance to be the head of an art-loving home, some day in the future. Let him become a music-loving amateur, one of that vast body which makes the musical atmosphere of the country; but unless he have overwhelming talent and application, discourage his entrance into the musical profession.

LAFCADIO HEARN AND CONGO MUSIC

HENRY E. KREHBIEL

(*See Editorial Page*)

To the Editor of THE MUSICIAN.

Dear Sir: You have done me the honor to ask me for an opinion on the value of the editorial article which appeared in the New York *Sun* newspaper two or three weeks ago, which affected to discuss the sources of "Congo music," in the light of certain investigations assumed to have been made by the late Lafcadio Hearn, and certain of that lamented writer's conclusions — also assumed. From the point of view occupied by every serious investigator of folk song, the article has no value whatever; the writer of it is convicted of crass ignorance by his use of musical terms and his references to Gottschalk's pianoforte compositions based on so-called creole melodies; as a contribution to the biography of a singularly interesting literary personage it has the value that can be attributed to any series of mistaken statements which provoke contradiction and thus bring out the truth.

Lafcadio Hearn's interest in African and creole music was an outgrowth of a personal friendship and communism of intellectual pursuits and enthusiasms between him and me which began in Cincinnati over thirty years ago, and endured until his return from his second visit to the West Indies and his departure for Japan. Of and for himself he had no knowledge of music of any kind; but as a folklorist he made vast researches (though almost wholly in French writings), and all that he found that was fantastical and curious about music he reported to me by letter. For artistic music he never had the slightest concern, and I have a grave doubt if the name of Beethoven ever occurred to his mind or was put by him upon a written page. Musical symbols were a mystery to him. There were evidences in some of the melodies which he copied for me from foreign books that he drew the lines of the stave from note to note as he went on, and he never felt quite sure that I would be able to read what to him were weird hieroglyphics, — magical signs to conjure with, like the runes of the Northland. He heard music, as he saw everything, more with his imagination than his sense. The tales which he read in strange literatures of the power exerted by song fascinated him, and he would have liked to believe them and find physiological and psychological explanations for them which would fit into the system of modern science to which he was devoted. Once in the early years of our association I explained to him that the scales of all peoples were not alike, and that there were ears attuned to distinguish smaller intervals than our semitone. That struck deep into his soul, and he was continually looking for such tonal splinterings. He thought he heard them, too, and used to talk about them on all possible and impossible occasions. Granting that he could recognize tonal differences at all, except elementally (of which I am not sure), Hearn would have been more delighted by the performances of a singer with an atrocious intonation than with a Patti. He frequently complained that when musicians had written down a song for him and then sang it for his approval that they had omitted those fractional tones in which all the charm seemed to lie for him. I observe that he was still obsessed by the notion after he had been years in Japan. But this is in the nature of generalization, and I ought to be specific in criticism of the erroneous ideas of the writer of the article in the *Sun* newspaper.

First as to the assertion that after researches in New Orleans, Martinique, and the West Indies Hearn came to the conclusion that the so-called "Congo songs" were not African at all in origin: the writer has made the statement out of the whole cloth. He practically admits as much when he says that "the fact that he (Hearn) never issued any declaration in the connection would seem to prove that he had found no genuine Congo music worth the mention." Hearn's "researches" in folk song had ended long before he went to Martinique. The last six weeks of his stay in New York, while he was arranging with his publishers for the work to be done in the West Indies and touching up his story of *Last Island* for the last time, were spent in my home as my guest. For six years we had kept up a lively correspondence concerning our work, ideals, and ambition, and during a period in 1883 and 1884 we wrote much to each other about negro and creole music. So engrossing did the subject become that there was some talk about a book to be written by us in common; but it was the purely literary-romantic side that Hearn was interested in, as will appear presently. From Martinique he never wrote a word about folk song, but when he returned he gave me about a dozen specimens of songs and dances which he had got a band-master at St. Pierre to write down for him. I prepared four of the songs for the appendix of his book *Two Years in the French West Indies*, published by Harper Bros., and there they may be found. That was the end of his interest in folk song except from the literary side which endured in Japan; when he referred to the music which he heard it was always timidly and with the old obsession created by our talks years before when we were fellow-reporters in Cincinnati. The notion that there were scales in the folk music of some peoples which contained tones smaller than the Occidental semitone fascinated him and he seemed to make it the *crux* by which he tested the genuineness of all folk tunes. I think he confounded it with the *glissando* effect which can be heard in slave spirituals. In one of his letters to me he wrote: "The other night, as I was listening to a peculiarly hideous steamboat whistle, Page Baker said: 'That is like the wail of a banshee.' But just then the creole musician stepped up and cried out ironically: 'O happy man! There is your infinitesimally shaded African music! Verily,' I exclaimed, 'thou art almost correct; for it is even like unto the cannibal song of the Marquesas Islands which my friend Krehbiel used to sing for me!" At another time: "I think you are right about the negro-American music, and that a Southern trip will be absolutely essential because I have never yet met a person here able to reproduce on paper those fractional tones we used to talk about, which lent such weirdness to the songs. The naked melody robbed of these has absolutely no national characteristic. The other day a couple of darkeys from the country passed my corner, singing, — not a creole song, but a plain negro ditty with a recurrent burthen consisting of the cry: "Oh! Jee-roo-sa-le-e-e-em!" I can't describe to you the manner in which the syllable *lem* was broken up into four tiny notes, the utterance of which did not occupy one second, — all in a very low but very powerful key. The rest of the song was in a regular descending scale, the *Oh* being very much prolonged and the other notes very quick and sudden. Wish I could write it, but I can't. I think all the original creole-negro songs were characterized by similar eccentricities. More than ten years later, in a paper on *Japanese Popular Ballads*, read before the Asiatic Society of Japan and reprinted in his book *Kokoro*, he said: "To reproduce such melodies, with their extraordinary fractional tones, would be no easy task, but I cannot help believing that the result would fully repay the labor."

So far from believing that the music of the negroes to which we listened while investigating voudooism and creole songs in New Orleans (which is the only place in which he gave any heed to the music, and this wholly for love of me and our mutual enthusiasms) was corrupted French and Spanish music, Hearn believed that the opposite process had taken place. It was negro music that had been sophisticated by French and Spanish influences. In proof of this here is an extract from a letter to me bearing directly on the subject: "I must tell you, however, that creole music is mostly negro music, thought often remodeled by French composers. There could neither have been creole patois nor creole patois melodies but for the French and Spanish-blooded slaves of Louisiana and the Antilles. The melancholy, quavering beauty and weirdness of the negro chant are lightened by the French influence or subdued and deepened by the Spanish." How far this is from the *Sun* contention that Hearn grew discouraged in his musical investigations because he had found that all negro music was merely an imitation of the music which the negro heard from his mistresses in America I need not point out. It would have almost broken his heart had I told him that the music which he heard from black singers contained no elements that I could recognize as African but were only perverted Scottish songs. Little as he knew of music, Hearn would never have been guilty of such ethnological, historical, and sociological blundering as characterizes nearly everything that I have read on the subject from those who hold the view of the writer in the *Sun*. But, as I have already remarked, it was only the literary side of folk song of which he had knowledge or concerning which he spoke with conviction based on knowledge. He made only a few efforts to secure melodies for me from original sources. From the notation of a Mr. Grueling he sent me a voudoo song, a creole song entitled *Belle Amerikaine*, and the street cry of an itinerant vender of clothespoles: from Martinique the songs and dances already mentioned From a French translation of an Arabian slave-dealer's book on Ouaday he copied eight songs with corrupt Arabian and African texts. This was the extent of his contribution to my collection from the musical side. Textually his help was invaluable, and the enthusiasm with which he entered into the project of collaboration on a book on negro music in America is attested by the following letter: —

Dear K.: —

Just got a letter from you. Hope my reply to your delightful suggestion was received. I fear I write too often; but I can only write in snatches.—Were I to wait for time to write a long letter the result would be either o or something worse.

I have already in my mind a little plan. Let me suggest a long preface, and occasional picturesque notes to your learning and facts. For example, I would commence by treating the negro's musical patriotism,—the strange history of the griots, who furnish so singular an example of musical prostitution, and who, although honored and petted in one way or otherwise, are despised by their own people and refused the rites of burial. Then I would relate something about the curious wanderings of these griots through the yellow desert northwards into the Maghreb country — often a solitary wandering; their performances at Arab camps on the long journey, when the black slaves come out to listen and weep; then their hazardous voyaging to Constantinople, where they play old Congo airs for the great black population of Stamboul, whom no laws or force can keep within doors when the sound of griot music is heard in the street. Then I would speak of how the blacks carry their music with them to Persia and even to mysterious Hadramant, where their voices are held in high esteem by their Arab masters. Then I would touch upon the transplantation of negro melody to the Antilles and the two Americas, where its strangest black flowers are gathered by alchemists of musical science, and the perfume thereof extracted by magicians like Gottschalk. (How is that for a beginning?) I would divide my work into brief sections of about a page and a half each — every division separated by Roman numerals and containing one particular group of facts.

I would also try to show a relation between negro *physiology* and negro music. You know the blood of the African black has the highest human temperature known — equal to that of the swallow — although it loses that fire in America. I would like you to find out for me whether the negro's vocal cords are not differently formed and capable of longer vibration than ours. Some expert professor in physiology might tell you; but I regret to say the latest London works do not touch upon the negro vocal cords, although they do show other remarkable anatomical distinctions.

Here is the only creole song I know of with an African refrain *that is still sung*. (Pronounce "wenday," "mak kiyah.")

Ouendé, ouendé, macaya!
Mo pas barassé, *macaya;*
Ouendé, ouendé, macaya!
Mo bois bon divin, *macaya;*
Ouendé, ouendé, macaya!
Mo mangé bon poulet, *macaya;*
Ouendé, ouendé, macaya!
Mo pas barassé, *macaya;*
Ouendé, ouendé, macaya!
Macaya!"

I wrote from dictation of Louise Roche. She did not know the meaning of the refrain; her mother had taught her, and the mother had learned it from the grandmother. However I found out the meaning, and asked her if she *now* remembered. She leaped in the air for joy, apparently. *Ouendai* or *ouendé* has a different meaning in the eastern Soudan; but in the Congo, or Fiot, dialect it means "to go," "to continue," to "go on." I found the word in Jeannest's vocabulary. Then *macaya* I found in Turiault's *Etude sur la Language Créole de Martinique: ça vent dire "manger tout le temps," "excessivement."* Therefore here is our translation: —

"Go on! go on! eat enormously!
I ain't one bit ashamed; eat *outrageously!*
Go on! go on! *eat prodigiously!*
I drink good wine; *eat ferociously!*
Go on! go on! *eat unceasingly!*
I eat good chicken, *gorging myself!*
Go on! go on! etc."

How is this for a linguistic discovery? The music is almost precisely like the American river music, — a chant almost a recitative until the end of the line is reached: then for your mocking music!

And, by the way, in Guyana there is a mocking-bird more wonderful than ours, — with a voice so sonorous and solemn and far-reaching that those creole negroes who dwell in the great aisles of the forest call it *Zozo monpe* ("l'oiseau mon-père"), the "My Father bird." But the word father here signifieth a spiritual father, — a *ghostly* father — the "PRIEST-BIRD!"

Now dream of the vast cathedral of the woods, whose sanctuary lights are those of heaven!

L. H.

In conclusion (since it is not at all necessary that I give my present views on the general subject raised by the writer of the *Sun's* article, but only set forth those of my dead friend), let me tell the story of the articles on creole music written by Mr. Cable. It was while Hearn and I were in the midst of our inquiries concerning creole music that Mr. Cable, who had made Hearn's acquaintance in New Orleans, came to New York bringing a letter of introduction to me from Hearn. The men had been drawn together by their mutual interest in creole studies and Mr. Cable was desirous to introduce some music, which he had collected, in some articles which he had in contemplation. The extended collaboration between us, which he proposed, I found myself obliged to decline for the reason that I did not feel myself sufficiently equipped in material, for one thing, and because I could not adjust my manner of treatment to that of my distinguished friend, who graciously submitted part of his manuscript to me at his home in Simsbury. I looked over the music for him, however, made simple arrangements of some of the songs, added some of my own, and the articles appeared in the *Century Magazine* for February and April, 1886. I fancy that Mr. Cable was quite as much amused as I to learn of the density of his musical ignorance, the relation of his little songs to the music of Lulli, Rameau, Boieldieu, Adam, and Flotow (ye gods, what a jumble!) and that the innocent little things are "scores" which, in turn, are "a vulgarized and dilated (diluted?) expression of well-known French and Spanish compositions." Better not to know so much than to know so much that isn't so; — it's a wise, if homely adage.

H. E. KREHBIEL.

Blue Hill, Me., Sept. 12, 1906.

ELEMENTARY ITALIAN

This series of lessons is repeated in response to a very general request.

Italian in its usual aspects is not a difficult language, and its connection with the art of music is so close that even an incomplete knowledge of it cannot help being of great service to musicians and amateurs. The lessons will be made so simple that only a moderate amount of time will be needed to master them.

The first subject to be taken up is the correct pronunciation of the language. A thorough knowledge of this is of prime importance both from a musical and from a linguistic point of view. The first two lessons therefore are made longer than the following ones. They should be mastered completely before the others are taken up and they should be referred to constantly in future reading.

LESSON I

PRONUNCIATION, VOWELS

A, *i*, and *u*, as vowels, have each one pronunciation which never varies.

A is pronounced as the *a* in "father." Examples: —

La cása, the house — *L'ária*, the air

I is pronounced as *ee* in "beet." Examples: —

Il vîno, wine — *Infinîto*, infinite
Mîo, my — *Símile*, like

U is pronounced as *oo* in "hoot." Examples: —

Lúna, moon — *Mutáre*, to change
Uno, *dúe*, one, two — *Púnto*, point

If the student is careful not to drawl or clip short the vowel sounds, no difficulty need be experienced with them.

E and *o* have each two sounds, called respectively the open and the close. It is difficult to reproduce them accurately without oral instruction. There are no exact equivalents for them in English speech In following written directions one is likely to produce sounds that may seem outlandish. This, however, will be no proof of their incorrectness.

E, close, sounds nearly like *a* in "hate." The difference slight, but important, consists in the fact that the close Italian *e* is a single vowel sound, which may be prolonged indefinitely without losing its quality. The English *a* in "hate" has a tendency to become a diphthong. Its sound might be represented by the spelling "haeete," pronounced as one syllable. This tendency to develop into a double vowel sound must be resisted in pronouncing the Italian close *e*. Examples: —

Méno, less — *Avére*, to have
Bére, to drink — *Cadére*, to fall
La mádre, mother — *Amáre*, to love

Close *o* is approximately like *o* in "dote." English-speaking people, however, instinctively add the sound of a *w* to the *o*, as in "go," "no," "Lo!" This must be guarded against in the Italian. Examples: —

Dópo, after — *Cóme*, as, how
Dóve, where — *Il leône*, the lion

The open sound of *e* lies between the *e* in "set" and the *a* in "sat." Examples: —

Bêllo, beautiful — *Sêi*, six
Il têmpo, time — *Sêtte*, seven

The open sound of *o* is like *aw* in "jaw" or "draw," but shorter. Examples: —

Fuôri, out — *Il bôve*, the ox
Una côsa, a thing — *Nôstro*, our

The following rules will help to determine the close or open quality of *e* and *o*: —

1. They are always close when not accented. (Half the words in the language illustrate this rule.)

2. In words of one syllable ending in a vowel, and in other words in which the last syllable is a vowel and accented, final *o* is open and final *e* is close. (Important exceptions to this rule are the following: *è*, meaning "is," is an open vowel; *lo*, one form of the word meaning "the," has a close *o*; and *o*, meaning "or," is close.) Examples: —

Cant'o (open), he sang — *Sô* (open), I know
Te (close), thee, you — *Perchè* (close), why
Che (close), what

In these lessons the syllable in which the stress of accent occurs will be indicated by a sign. In the case of *e* and *o* the acute accent (´) will show that the vowel sound must be close, and the circumflex (^) that it must be open. The grave accent (`), used when the final syllable is accented, is the only one of the three employed regularly by Italian writers. It is placed also over some monosyllables, notably *è*, meaning "is."

LESSON II

PRONUNCIATION, CONSONANTS

C before *e* or *i* has the sound of *ch* in "children." Before *a*, *o*, and *u* it has the hard sound of the English *k*. Examples: —

Cênto, a hundred — *Cercáre*, to search
Cominciáre, to begin — *Il cîelo*, the sky

To preserve the hard sound of *c* before *e* and *i* an *h* is added to it. Examples: —

Chiamáre, to call — *Che*, which, that

Sc, before *e* and *i*, is pronounced as the *sh* in "shoe." *Sc* in other positions is pronounced as the English *sk*. *Sch* before *e* and *i* is pronounced as *sk*. Examples: —

Una scêna, a scene — *Scêndere*, to descend
La scuôla, the school — *Scusáre*, to excuse
Lo schiávo, the slave — *Schiúdere*, to open

G before the vowel *e* and *i* is soft as in "gentle." Example: —

Gentîle, gracious — *Gi'u*, down

In other positions *g* is pronounced like the *g* in "girl." Examples: —

Gáudio, joy — *Gránde*, large

Gh before *e* and *i* has the hard sound of *g* in "girl." Examples: —

Ghiáccia, ice. — *Una ghirlánda*, a garland

Gli has the sound of *'ly* in "halyard." Examples: —

Ciglio, lily — *Figliuôlo*, son

Gn is like *ni* in "minion." Examples: —

Dignità, dignity — *Dégno*, worthy

H is always silent. Example: *Ha*, he has.

N, when occurring before *q* or the hard *c* or *g*, is pronounced as the English *ng* in "sing." Examples: —

Stánco, tired — *Tranquîllo*, quiet

R should be trilled; if it is double, emphatically. Examples: —

Il máre, the sea — *Bîrra*, beer

S has usually the sound of the English *s* in "sin." When a single *s* stands alone between two vowels it is pronounced like the English *z*. Examples: —

Sásso, rock — *Sorêlla*, sister
Il víso, the face — *Il váso*, the vase

Exceptional cases in which *s* must be pronounced sharply, as in "sin," although placed between two vowels, are the following: *cásá*, house; *côsa*, thing; *cosí*, thus, and the adjective ending — *óso*, as in *maestóso*, majestical.

Z is sounded as if it contained a *t*. It has the effect of *ts* in the words "hats" or "cats." Examples: —

La ragázza, the girl — *Il pránzo*, dinner

I, sometimes written *j*, has before a vowel the effect of the English *y*. Examples: —

Il fióre, the flower — *La fiámma*, the flame

In combination with *c* and *g* in the syllables *cia*, *cio*, *ciu*, and *gia*, *gio*, *giu*, its only effect is to soften the consonants, giving them the sounds of *ch* in "children" and of *g* in "gentle." Examples: —

Giórno, day — *Già*, already
Cacciáre, to hunt — *Baciáre*, to kiss

U, unaccented and before a vowel, has the effect of the English *w*. Examples: —

La scuôla, the school — *Fuôri*, out, outside
Quéllo, that — *Quándo*, when

A very important peculiarity of Italian speech is the distinctly double pronunciation of double consonants. In such words as *tranquîllo*, quiet, *quêllo*, that, *prêsso*, near, *dônna*, woman, lady, and *stêtte*, he stood, a separate emphasis must be laid upon each *l*, *s*, *n*, and *t*.

SOURCES OF "CONGO SONGS"

(See Mr. H. E. Krehbiel's Letter to THE MUSICIAN, page 544)

We feel moved to say another word about a recent article in this newspaper discussing the late Lafcadio Hearn and, incidentally, making reference to the Congo folk music, of which he was in eager search for many years. In the course of the article it was asserted that Hearn, after all his researches in New Orleans, Martinque, and various West Indian districts, reached the conclusion that the so-called "Congo songs" were not of African origin at all. He had been fascinated by the quaint lullabies and crooning cradle chants, as indeed had every one who heard them; and he conceived the idea that they were simply refined and chastened evolutions of the ancient, barbaric music of the Congo. But after long investigation, enlightened as he was by profound and varied information and previous discovery, he found that nine-tenths of the supposed African melodies were simply rude adaptations of the Spanish and French songs which the slaves had heard in Santo Domingo.

Fifteen or twenty years ago George W. Cable, at that time one of the most delightful and graceful historians of Louisiana Creole life, published in the *Century Magazine* two or three articles on the alleged Congo songs. He gave both the words and the musical score. The result was extremely interesting and attractive. Mr. Cable, however was not a musician. He knew nothing of the works of Lulli, Rameau, Boieldieu, Adam, Flotow, and he jumped to the mistaken conclusion that the songs exploited for his hearing were the real bequests of darkest Africa to the waiting Christian world. As a matter of fact, nearly every one of his scores was a vulgarized and dilated expression of well-known French and Spanish compositions.

The case of Gottschalk was very different. He was a musician, and more; not only a *mæstro* at the piano, but a genius with initiative and divination. He spent years in New Orleans. No doubt he attended the Voudoo festivals and celebrations on "St John's Eve," and heard the wild overtures and antiphonies of the frantic celebrants assembled on the shores of Pontchartrain. Certainly his most attractive compositions in that line, the *Bamboula* and the *Callinda* would seem to indicate that he had caught the inspiration. But Louisiana musicians, speaking in all reverence for Gottschalk, contend that his compositions, magnificent though they be, reproduce merely the Spanish and French melodies of a century or more ago, filtered through the dull, bewildered medium of the Congo consciousness. Competent authorities in New Orleans long ago declared that the very nature of the scale and measure of this music proved its European origin.

At all events, Lafcadio Hearn accepted this conclusion, for after several years in Cincinnati and New Orleans devoted to research and inquiry, he went to various West Indian islands in pursuit of the knowledge he had failed to accumulate in the United States. Moreover, the fact that he never issued any declaration in the connection would seem to prove that he had found no genuine Congo music worth the mention. This is the theory of the modern cognoscenti in Louisiana who recognize in all the so-called negro chants and lullabies the under throb which marks the old Spanish and Provencal compositions, such as *La Golondrira*, *A la Media Noche*, and so on. There can be no reasonable doubt that Hearn left New Orleans, and subsequently the West Indies, in despair of satisfying the interest which for so long had monopolized his intellectual solicitudes.

Unquestionably, Hearn was a genius, but he couldn't make a silk purse out of a sow's ear, and when he realized that fact, he had the grace to abandon the hopeless task. Incidentally, we note with interest the announcement of a forthcoming biography of Hearn by "A lady who knew him for thirty years." Maybe we shall have some further and more brilliant light from that source. Any one who has known Hearn for thirty years must have begun the acquaintance in Cincinnati, and concluded it in Japan; and we await the revelation with an anxiety which it were inadequate to describe as feverish. — *New York Sun.*

To the Editor of THE MUSICIAN: —

MANCHESTER, ENG., Aug. 2, 1906.

Dear Sir: Will you allow me a few lines in which to correct the most serious of Edmondstoune Duncan's errors in his review of my little book on Elgar. In the first place, I do not "approach Elgar's work from the critical standpoint of a partisan"; this, I should think, would be clear from the book itself. In the second place, Mr. Duncan is totally wrong when he says that "in his daily records of English music our author rarely praises any other work," and that "his attitude of pronounced hostility to almost the whole body of English composers, with this single exception (Elgar) is now pretty generally known." Nothing could well be farther from the truth. I can forgive Mr. Duncan the primary unwisdom of not reading every line I write, but not the secondary unwisdom of talking about me as if he did. So far from being hostile to English composers, I have repeatedly expressed my admiration for the work of men like Granville Bantock, Joseph Holbrooke, F. C. Nicholls, R. H. Welthew, Dr. Walford Davies, Benjamin Dale, Percy Pitt, and others, and as, in addition, I have read many thousand pages of manuscript scores that have never been performed, I hardly think the young English musician will agree with Mr. Duncan. I am certainly "hostile," if Mr. Duncan loves that word, to *some* English composers, not because they are English, however, but because they so rarely compose anything worth composing.

Yours sincerely,
ERNEST NEWMAN.

EDITORIAL NOTES

In this issue of THE MUSICIAN the first of the series of Italian lessons is repeated. This is done in response to a very general demand.

* *

Mr. Krehbiel's letter on the subject of Lafcadio Hearn and Congo Music is the most authoritative word obtainable on this subject. Mr. Krehbiel and Mr. Hearn were friends for many years in Cincinnati, but after Mr Hearn made his residence elsewhere he corresponded with Mr. Krehbiel regularly; his letters are veritable literature of high order covering an immense range of human thought and interest.

* *

The December issue of THE MUSICIAN will be a children's number.

* *

A new magazine entitled *Die Stimme*, devoted to the voice and to tone building, has just appeared in Berlin This attractive publication is issued by Trowitzsch & Son. The editors are Dr. Theodor S. Flatau, Karl Gast, and Alois Gusinde. The science and art of the voice will be treated in its pages, together with departments covering the hygiene of the voice, the pedagogy of school singing, etc.

The first number appeared October 1.

The magazine is distinctive and we wish it success.

The September musicale, given at Los Angeles by the Metaphysical Club of that city, was one of the best in its history. The program included guitar solos, *The Forge* and variations on *Home, Sweet Home*, by Celia Crossman Broughton; address by Dr. Lewis, on *Love of Home;* songs, *The Minor Chord* and *For Love of You*, by Mrs. Fife; address by Miss Martin, entitled *The Power of Thought;* songs, *Crossing the Bar* and *I Fear no Foe*, by Thomas Masterson, baritone; also vocal numbers, *Brightly the Sunlight* and *The Rosary*, by Louise Beattie, and Chaminade's *Madrigal*, given by Mrs. Fife with admirable quality of voice and artistic manner.

INFORMATION WANTED

Sir, — Can you send me a sample copy? Free.
Do you publish Sacred song-poems?
Who could give me a "royalty" free of expense in New York?

FREE SCHOLARSHIPS

Many magazines have discussed recently the ethics of free scholarships. Dr. Frank Damrosch, director of the Institute of Musical Art, contributes the following testimony as to the popular demand for free scholarship privileges. The Institute receives more applications of various kinds than would fill many pages of this magazine. — *Editor.*

My dear mr damrosch

Sterling Mackinlay, the English voice specialist, is said to be writing a life of the late Manuel Garcia, whose pupil he was for some years.

* *

Felix Fox, the Boston pianist, will be active in recital work this season, and a number of pianistic novelties will be given by him for the first time in the United States.

UNDER THE CHESTNUT TREE

Music and Manners

Since the classical days when "Little Tom Tucker sang for supper" many musicians have been asked to partake of hospitality and then requested to pay for it in artistic service. Fischer, the famous oboe player, once gave a very neat answer to a certain noble lord who invited him to supper, adding the remark, "Of course you'll bring your oboe with you." "Thank you, my lord," said Fischer, "my oboe never sups."

* *

Holiday Need

"I am working on an invention," said the great genius, "and if it proves a success it will enable me to grasp fame and fortune."

"What is the nature of it?" asked the inquisitive person.

"A noiseless drum," answered the great genius.

* *

Disproved

"Before I was married my wife used to play the piano. But she has given it up since."

"And yet some folks say that marriage is a failure."

* *

A rather amusing incident occurred at a rehearsal of the orchestra at a theatre in the Midlands a short time ago.

The clarinet player (who was a tinplate worker by trade) so exasperated the conductor by repeated blunders that at last he exclaimed, angrily: —

"Why, man, you can't play a clarinet."

To which the man replied: —

"And you can't make a bloomin' teapot."

* *

Impossible

Mr. Pounder. — "Won't you sing something for me, Miss Propper?"

Miss Propper. — "I can't. Mamma isn't here."

Mr. Pounder. — "But I can accompany you on the piano."

Miss Propper. — "Oh, dear, no! Mamma doesn't allow young men to accompany me anywhere without a chaperon."

* *

After the Uproar

The choir of a large metropolitan church had sung a *Te Deum* of a very ornate description, the end of which was not only complicated, but required the exertions of the full lung power of the choristers. While the echoes of the last notes were still faintly sounding, the minister arose and in a clear but semi reproachful tone began to read the twentieth chapter of the Acts of the Apostles, of which the first words are "And after the uproar was ceased."

* *

Editorial Courtesy

Contributor. — "Is it necessary to send stamps when submitting a manuscript for publication?"

Editor. — "The stamps are much more welcome than the manuscript."

* *

Clara. — "He says I sing better than any girl he knows. What do you think of that?"

Maud. — "I think he should extend his acquaintance."

A Piracy

"What's the charge against the prisoner?" asked the magistrate.

"Piracy on the high seas," answered the constable.

"Piracy on the high seas, in this day and age?" queried the magistrate. "This is certainly unusual."

"Nothin' unusual about it at all," said the constable. "He plays assistant solo cornet in a band. Sits right close up to the leader. When any high C's are heard, he looks wise, puffs out his cheeks, and lets on that he played 'em. As a matter of fact, he can't hit F on the top line of the staff."

"Twenty years solitary confinement," thundered the judge. "Let his companion be a contra bass sarrusophone."

* *

Said and done in the Best of Humor

"What do you think of her vocal ability?" asked the manager of the show after the prima donna had ceased to warble.

"Well," replied the man who had come in on a pass, "she has an admirable voice for destroying silence."

* *

"How long did it take you to write the libretto of that comic opera?" asked the admiring friend.

"Thirty minutes," answered the famous humorist, "and it wouldn't have taken that long, only I had to go around the corner to the drug store to get an almanac." —*Courier-Journal.*

* *

Ma. — "Gracious! What's the matter with the baby?"

Pa. — "Oh, he bumped his head against one of the pedals of the piano."

Ma. — "Poor little dear! Perhaps he's seriously hurt."

Pa. — "Oh, I guess not. It was the soft pedal he struck." — *Philadelphia Press.*

* *

Not Contemporaries

Crittick. — "Yes, I took in the opening performance of Gagley's comic opera last night."

Askins. — "Yes? Nothing new there, I suppose."

Crittick. — "Well, some of the people in the audience seemed to be; they laughed at the jokes." — *Catholic Standard and Times.*

* *

"What is the longest time your star canaries can sing?" asked a customer of a Sixth Avenue bird dealer.

"I don't know," said the dealer. "I have never timed them. Most people judge a bird by the beauty of its plumage and the quality of its song."

"Well," said the customer, "I don't. I go by quantity, not quality. I buy all my birds by the time test. I've got a canary up to my house that can sing sixteen minutes at a stretch. Have you anything that can beat that?"

Although protesting that that was a most unusual test, the dealer finally agreed to a contest. The singing match showed that he had one canary that could sing twenty-one minutes.

"He's a wonder," said the customer, and bought him at an extraordinary price.

* *

Wigg. — "He doesn't know a good thing when he sees it."

Wagg. — "Of course not. He's a critic."

Her Pull

"My goodness, I wonder why they don't discharge that chorus girl. She can't sing and her dancing is awful."

"I know it; but, you see, one of her grandsons is manager." — *Chicago Record-Herald.*

* *

"That fellow has a good ear for music. I wish I had it," said the old curmudgeon.

"Nonsense! He's stone deaf."

"Well, then he's got the best kind of an ear for most music."

* *

Soldiers march to Their Own Whistling

An incident occurred in London recently which would have shocked the military officer of a century ago. A battalion of the Irish Guards, led by two mounted officers, was marching along Oxford St. to the merry accompaniment of a fife and drum band. Suddenly, with a flourish of drumsticks, the music ceased, and for a little time the soldiers tramped along with solemn and steady tread. A boy came up a side street whistling the song of the moment, *My Irish Molly, O.* A soldier in a fit of abstraction joined in. The refrain was immediately taken up by others, and it flew to the front and rear ranks, until presently the whole battalion marched to its own whistling accompaniment. — *Sphere.*

* *

"Is he the leader of the choir?"

"No; the referee." — *Judge.*

* *

"Why do you prefer professional singers and elocutionists to amateurs?"

"Because," answered the disagreeable person, "professionals never take you unawares." — *Washington Star.*

* *

An amusing anecdote concerning Professor Paine of Harvard was told by Orton Bradley in London the other day in course of a lecture on American composers. Paine once left his wife in their box at a theatre. Getting a prescription filled at a pharmacy, he absent-mindedly took a car for home. His wife, following in a carriage, found him in his library in dressing-gown and slippers. He did not clear the atmosphere when he abstractedly asked her, "Where have you been?"

* *

Reginald de Koven had entered a New York café one afternoon and ordered his luncheon, when he noticed that the waiter was lingering, as if to say something.

"Well, what is it?" asked the composer, looking up from his paper.

"Beg pardon, sir," said the garçon; "but do you remember me?"

"Can't say that I do."

"Well, sir, I used to sing in one of your companies."

"Oh, yes," responded De Koven, after a survey of the waiter's countenance. "I remember now. You had a part in *Foxy Quiller.*"

"Yes, sir. I suppose, sir, you're surprised to see me now as a waiter."

"Not at all," replied De Koven; "I heard you sing."

* *

If the author of *I love My Love in the Morning* had happened around at her home at that time o' day the song might never have been written.

A MODERN VIEW OF THE RULES OF HARMONY

PHILIP H. GOEPP

It seems sometimes that the teaching of the basis of composition, of *Harmony*, as it is called, has advanced least of all the phases of musical education, — nay, more, that the method of instruction here is behind all other branches of pedagogy. To be sure, we are apt to forget that Harmony, as well as higher composition, is not an exact science. In spite of its pervading arithmetic quality, it can hardly be studied as a pure branch of mathematics. It is, indeed, a fine question whether, if music could be regarded as the essence of the science of numbers, it could effectively be taught in a pure course of mathematics. History seems to give a negative answer. The mistake in the teaching of Harmony seems to have lain in putting it on too exact a basis, in making its terms and rules too precise. To be sure, we must not leave out of account the element of error in the formulation.

The temptation for putting art on the plane of science is very great in the case of music; for there is here a far closer relation to mathematics than in any other of the arts, save architecture.*

In all kinds of ways this kinship finds an expression in the Pythagorean view of the music of the spheres; in a famous definition of a monk of the thirteenth century;† in the philosopher Schelling's description of architecture as frozen music. More even than the art of building, music is compact of numbers in its very fibre. The nature of its medium, sound, is conditioned by regularity of vibration. Its alphabet, the degrees of the scale, are determined by the mutual ratios of these vibrations, and so their union in the chords of Harmony. In melody, the unit of its utterance, is mainly a charm of symmetry, and even here the structure, as in a snow-drop, seems infinitely divisible into question and answer. In the full stretch of its organic design, there is a cyclic perfection in the course of its various phrases. Moreover, joined subtly with this sweep of melodies is the play of the main harmonies, and there is besides the final dimension of depth in the simultaneous song of the various melodic voices.

It was natural that this wonderful art of implied science appealed to the logical mind of the Middle Ages as a field for refined formulation. As Harmony was the mere arithmetic, so counterpoint became the higher algebra of the tonal art. And, indeed, there is no harm in the mathematical equipment of the composer, provided his fancy be not discouraged. As the study of geometry is said to be the best preparation for the lawyer, so a mathematical training is of the utmost value to the musician of highest ambition.

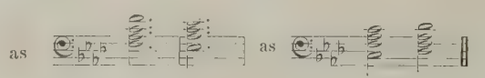
And yet we must never forget that we are dealing with an art. If dogmatic formulation is a harm to real religion and to all higher thought, it is most truly so in the field where fancy must reign supreme. The course of the theory of music since the Middle Ages has been a slow shelving of formulas. Those were the days when men thought they had found a heaven-sent *recipe* for setting any words to music, or where every tune had a harmony by precise rule.

With the revolt from the rigor of church discipline to new secular expression came a like danger in the tyranny of form. The great lesson is not a tonal anarchism, but the impermanence of any one concrete rule, as such. The true value is in the idea of order, of the quality of form; in the sense of pure tone and harmony; the mastery of the play of many voices.

This matter of the essence of technique is probably least felt in the teaching of the basis of composition in Harmony. We have escaped from all other formulas but these primary rules against parallel fifths and octaves. They still live, like the laws of Medes and Persians. Or, perhaps they are more like an Egyptian creed, taught by skeptic priests to the credulous multitude, or the soothsaying of Roman augurs, who could not meet each other without smiling. We have arrived at the exalted stage when we sternly forbid the raw student what we find throughout the classics, and what we do ourselves when we really want it. Parallel fifths and octaves occur in the symphonies of Beethoven, Haydn, and Brahms, sometimes in the form most severely prohibited. In our best books we have hardly moved away from a dread worship of the law, nor from special pleading in defence of the classic violations. To be sure, the matter is not so much of absolute assertion, as of pedagogic expediency. The truth is that no "parallel" intervals or chords can possibly be wrong as such. The progression, like the play, is the thing, not the direction of the chords. Why should we not say this to our students? We forget that Harmony is one thing, voice leading quite another. The two seem to be confused (certainly to the mind of the student) in the teaching.

It is a fair question whether we ought not to begin with pure harmonic progression, without the rigor of the scheme of voices, — in the manner, say, of playing on the piano, as we teach children to talk before they write. In the first exercises in Harmony, as it is commonly taught, the attention is fixed too much on the four-voiced design, too little on the relation of the chords to each other. A bolder and surely a better mode of teaching would tell the frank truth to the student, and aim the course at the true mark. The mere negative attitude is always inadequate, in the teaching of art; it is worse when the rule lies against an imaginary wrong.

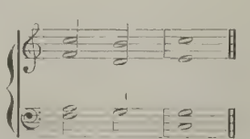
The truth about "parallel fifths" is that they are a frequent symptom of a bad progression. Thus the prohibition is a convenient rough shift to the teacher. In this association with wrong harmony, these consecutive fifths came to be the type and essence of the error, and likewise the octaves. The latter are clearly seen to be harmless in themselves, and wrong only as parts of the moving choir of voices, one voice being virtually lost in the motion of two parallel octaves. But again, the separation of the elements of harmonic progression and of voice-leading ought to be emphasized. Parallel octaves may be beautiful when the harmony is sound, — even between the outer parts, without a purpose of reinforcement, where the effect of the melody is quite distinct from the turn of bass, though they happen to move in octaves.* So, parallel fifths between tonic and dominant chords are too evidently good to be any longer condemned. Some secondary "fifths," between the third and seventh notes, would be avoided at a distinct loss:—



It is a question whether there is a gain in a false teaching that must later be recanted. As long as we teach an obsolete rule, it will remain to haunt us in our own writing. It is time to throw off the senseless tyranny. A striking protest is found in Mozart's diary, written more than a century ago. Speaking of the librettists of the time, he says: "If we composers were equally obedient to our own rules (which were good enough when men knew no better), we should turn out just as poor a quality in our music as they do in their verses." In a recent article a Hungarian complains that the main obstacle to a true record of the music of his people is the painful avoidance of these ancient "faults."

The time seems nearing for an authoritative statement of the true basis of harmonic progression, such as is implied in the classics, and with greater consciousness in modern composition. The real sanction of good harmony cannot lie in a mere prohibition. It may be worth while to attempt a rough conjecture of some such principle, with a view, at the least, to discussion.

A strong factor in such an analysis will be the implied bass, which accounts for so many chords in older use as harmonies of the seventh without the basic notes. Thus the old cadence:—



ugly in itself, becomes grateful with a sounding of the D in the first chord. Grieg, in his transcription of Mozart sonatas for two pianos, has frequent instances of such elucidation.

Another premise must be stated. A chord may, of course, be repeated in the same position, or in various inversions, with changing bass. Now, a further step along this path virtually occurs when the chord, say, of the tonic, is followed by the chord of the relative minor. For it is clear that the latter, in its full compass, with the seventh, embraces the main triad of the tonic, and appears, therefore, as a larger phase of the former. And so every chord may be followed by the chord a third below, in a continued series, if it please, each being, so to speak, swallowed up in its successor, — the reverse process, as it were, of the pecling of an onion. Again, the seventh and higher intervals, such as the ninth and the eleventh, are the factors by which each chord is given a new and lower foundation. So far, however, there is no progression in a strict sense. Here the simple cadence may be taken as true type. It is probable that the dominant has not, as yet, been understood in its full import, where again the element of the seventh (and of the implied bass) plays a strong part. Indeed, it seems that a true harmonic progression occurs only where there is a dominant or quasi-dominant relation. If there is a fear of limited choice, it will soon disappear. We are speaking, moreover, of the teaching of harmony rather than of composition itself. The composer, in any case, must write unconscious of the grammar of his art. But the student gains a positive, sound type and model for his first musical utterance. He learns, like the child in school, the meaning of the musical predicate. He can say something, can make a true tonal phrase, however simple.

To the composer there are here no more hindering fetters for his fancy than to the poet in the principle that every sentence must have a subject and a verb. You can pile up your nouns and adjectives, as you can repeat and expand your initial chords, not to speak of the matter of adornment; but eventually the subject harmonies must have a cogent aim, must lead somewhere (*dominare*), just as the array of qualified nouns must have their predicate.

And, just as in prose and poetry, there is the full gamut of licenses, of elisions, — of what they call *anacoluthon* in the Greek grammar. And these add to each other in a continuing series, in an ever growing mass. An elision to-day suggests a greater one to-morrow; the ornamental note becomes integral and is itself the subject of adornment. Thus the *appoggiatura* is the abounding mark of the modern school. Finally, one of the strongest elements is the phase of chord which is, as it were, two-faced, like ancient Janus. Its simpler harmony takes on an implied bass for the coming progression. An obvious example of this is where the dominant of the major is succeeded by the relative minor, as in the familiar hymn: —

Here a bass note, a third below the chord of the dominant, is naturally implied in leading to the minor chord. The sure test is to play it and to hear the clearer, fuller resolution. So, as in enharmonic modulation a note repeated will assume another guise, each chord may give a new turn to the flight of harmonies. What might have seemed a hindrance is, in its full scope, a help and spur. And to the student it means a real start on the path of musical expression.

To summarize, the weakness of the strict rule against parallel fifths is that it does not touch the main point of chord-progression, save by indirect and excessive prohibition of certain intervals in the leading of the voices. As "covered" fifths are now permitted, and likewise the case where one of the intervals is diminished, it might be well to cut down the rule still further, forbidding merely consecutive fifths in diatonic motion. Even here we must except secondary fifths, between the third and seventh of the chord. The resulting formula, if there must be a negative rule, might be efficient and reasonably true in its application.

* It is interesting to note that in the course of study for the degree of Bachelor of Science, just established at Harvard University, Harmony and Counterpoint are set down as branches that may be offered.

† *Musicus qui numerans nescit se numerare.* The musician is the unconscious arithmetician.

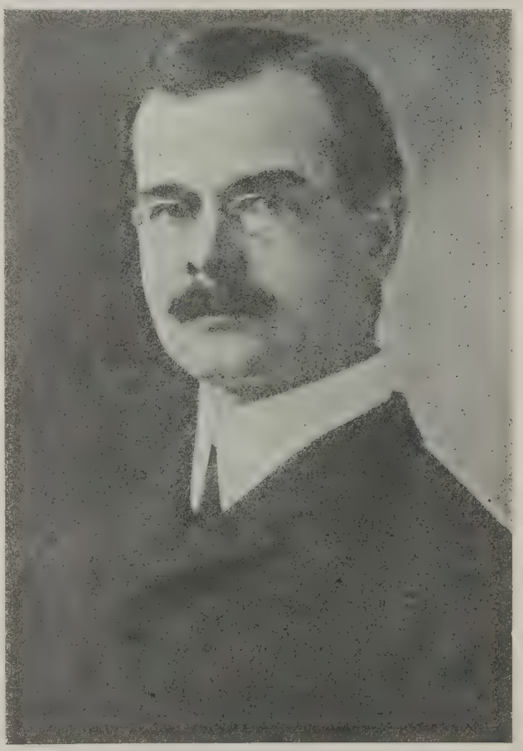
* This is especially seen in progressions that occur in the symphonies of Brahms, between the chords of the relative minor and the tonic (6-4) or the relative minor (6-4) and the sub-dominant.

THE TREND OF MODERN COMPOSITION

E. R. KROEGER

When listening to some of the vague and formless compositions written during the present decade, which are received seriously by some and even reverently by others, one is prompted to ask if indeed the mission of the Art of Music has not been lost sight of. Everything heretofore considered proper and even necessary in composition is studiously avoided. There is no clean-cut melodic outline; harmonic relationship is undesirable; wild wanderings through many keys are cultivated. Clearness in structural design is absent; all depends upon the impulse or caprice of the composer. Health, beauty, and charm are deliberately passed by for morbidity, ugliness, and repulsiveness. Simplicity, — once deemed a necessary attribute of a composer of rank, — has been cast away for studied complexity. This is to some extent parallel with the conditions which existed in the sixteenth century, when the more intricate the counterpoint, the more highly was it rated. The revolt from this state of affairs was indeed a great one, — so great that for a while it seemed almost incredible. In the works of Bach and Handel really musical counterpoint appeared, which practically obliterated all the "mathematical problems" of earlier composers. With the exception, perhaps, of Palestrina and Purcell, the great majority of people to-day are unacquainted with even the names of the composers preceding Bach, not to mention their music. Musical students should know something of them in their historical studies, and occasionally performers or singers should include some of their compositions on their programs. But that is all that is really necessary. Now to-day it is in instrumental music especially that a similar condition exists. All the instruments of the orchestra must be "doing something." What does it matter how they sound? Discords are but an evidence of genius. Indeed, the more striking the discords, the greater the genius. After all, what is Art? It has been well defined as being "that magic instrumentality by means of which man's mind reveals to man's senses that great mystery, the beautiful." Also, the same writer goes on to say: "The sense of the beautiful is that God-like spark which the Creator has placed in the soul of man." But these devotees of complexity seem to consider Musical Art as anything but a revelation of the beautiful. Ugly dissonances and disconnected rhythms, with noisy orchestration, constitute their belief in the mission of music. Heap Pelion upon Ossa. Use one hundred and twenty instruments for a symphony. "The more the merrier." Brobdingnagian music is the thing. Let the ideas themselves be trivial; only have a grandiloquent manner of uttering them. "What temperament! What imagination! What power!"

Then there is another class of composers who introduce high potency homœopathy in their works. They are veritable musical disciples of Hahnemann. An idea is elongated and distended as a gold-beater hammers out his precious metal. Scintillating, ethereal, elusive effects are sought after. Mysterious harmonies are to be rendered *pppp*, which glitter, glisten, and vanish, leaving not a wrack behind. Such music might be called "soap-bubble music." And these composers have their following, too. Their admirers claim that they picture the subtlest moods of the soul and play upon the most delicately attuned of the heart strings. Here the critic cries: "Oh, for a little red blood!" Other composers, "tear a passion to tatters." They write operas in which overwrought sentimentality seeks to take the place of love. Idealism gives place to realism. Their characters are of a low order, with but little thought above pleasure or passion. The tenor wails and groans, and the soprano screams and complains in response. The music is fragmentary and combines loftiness with triviality. Even composers of church music cannot escape criticism, for in many present-day anthems and cantatas the music is sugar-coated and sentimental, written more for the purpose of displaying the abilities of the choir than because of deep religious conviction.



E. R. KROEGER

Is the time approaching when hypocrisy, posing, and artificiality are to be supplanted by honest and sincere methods of musical expression? Will bombast and impressionism give way before frankness and naturalness? Will jugglery vanish before truth? Some future great master may even now be living who, by combining the musicianship of Bach, the democratic sincerity of Beethoven, the melodiousness of Schubert, and the power and color of Wagner with a new and striking individuality, may put to flight the existing craze for "effects" of various kinds, and again place Musical Art upon a basis of universal expression.

Jan Sibelius has completed a new symphonic poem based upon a Finnish folk legend. It will be given its first performance at Cologne shortly, under Fritz Steinbach's direction.

THE NERVOUS PUPIL

HARRIET PEARL SKINNER

The strenuous life that dominates our land at the dawn of the twentieth century clutches not only our bankers, our politicians, and our preachers in its relentless grasp, but also reaches out to the lads and lassies who should be enjoying the passing days with something of the irresponsibility of childhood.

But constant pressure of crowding tasks places an irrevocable ban on the care-free youth of long ago. Lessons of varied scholastic interest follow one another in such quick succession that the student of our time finishes one allotted subject only to take up many others, with scarcely a breathing spell between; and the day is done before he has completed his exacting routine.

To-day the ambitious parent seeks to educate his offspring in a hundred different directions, expecting poor young America to shine in each of his various pursuits with all the brilliancy of Schubert, and the lustre of Jonathan Edwards. Consequently, the student, struggling to propel his educational galley, often toils frantically at his oar until brawn has failed, and brain must do the work for both. Then spasmodic efforts ensue, and if the task be not lightened, and the hoarse commands of the captain be not stilled, the young worker, spent in body and mind, will presently succumb to exhaustion.

That any teacher should be allowed the opportunity of developing a pupil, and cultivating his talent along accepted lines with the student's time and strength sufficiently reserved for the working out of the master's precepts, is an idea quite beyond the pale of modern civilization. Instead, the youth is so heavily taxed with diversified subjects that the force of one of his actual conclusions will be appreciated by those who minister under existing conditions. "I cannot get my *algebra* lesson because I keep thinking of the practice I must do; and I can't memorize my *Andante* for wondering how much time I have left for rhetoric!"

II

Is it not then readily perceived that, by laboring under such continuous stress, the student's physical being is often racked almost beyond endurance, and that the *Nervous Pupil* is an inevitable product of the age?

Nothing could more clearly demonstrate the philosophy of cause and effect; the gospel of sowing and reaping. Therefore the Nervous Pupil is a quantity with which the pedagogue must reckon, and as a leader in art or science he will aspire to solve the problem successfully and accurately.

No person comes into more intimate contact with the results of this arbitrary system than the music teacher, and he should read the signs of the times distinctly enough that he will not mistake over-weariness for inattention, nor the errors of excitement for the blunders of poor preparation. If he will but remember that the time for reposeful study is a thing of the past; that a day of quietude, in which a student may master his scale or sonata, is unknown; that the music lesson must be learned with fifteen minutes snatched before school in the morning, twenty minutes stolen from noon, half an hour borrowed from the recreation period, and an hour forced in between Latin and book-keeping at night, he will seek to alleviate the rasp of the music lesson, and guard the gifts and poise of the present pupil carefully enough that no future virtuoso may be lost to the world through thoughtless or ill-conditioned treatment.

Discrimination must, of course, be wisely employed, for the laggard must, perforce, be prodded and the frivolous one be sternly held to the line of duty. Doubtless, to the end of time, the phlegmatic pupil will continue to vex, the uninterested one to harass the long-suffering music teacher. Upon these, a rigid rein must necessarily be held, and strict and unwavering discipline be applied.

In managing the Nervous Pupil so that music study need not be forsworn, but so that the often splendid talent may be brought to full flower, the simplest means must be used. Any teacher who will tactfully experiment in a quiet way, will find that the girl (this problem pupil usually chances to be a girl) whose fingers tremble visibly as she unstraps her music roll, may be diplomatically guided into the calmest self-possession.

The greatest obstacle in the path of the Nervous Pupil, and the one which the master must overcome first of all, is fear. It may seem an unpardonable weakness that a pupil should actually suffer from fright when coming into her instructor's presence, but it frequently occurs, nevertheless, and the fact cannot be controverted that when a woman is afraid, whether of "mice or men," her attention is largely distracted from any subject under consideration. If a frown upon her teacher's brow strikes terror to her soul; if an impatient tone causes her heart to beat until she believes suffocation is imminent; if a criticism voiced in sarcasm wounds her poignantly at the time, and lashes her until she writhes in memory of it throughout the succeeding week; the lesson is certainly a failure, the pupil is injured, and artistic progress seriously impeded. Let the master prove himself amiable and kindly disposed, in order that the palpitating pupil may not regard him as an ogre, but as a friendly and patient helper. Fear, so treated, will gradually give place to serenity and equable confidence.

When the Nervous Pupil dashes through a passage which she has at some previous time played with creditable care and facility, but now jumbles into a mass of discord, let the teacher not reprove or caution her. Such a thought were madness. Instead, he would more profitably pretend he must raise the window, or even leave the room for a moment, requesting the pupil afterward to begin again so that he may hear the selection from the beginning.

Flushing and paling cheek, riveted gaze, drawn brow and stiffened fingers, indicate great tension; and the intelligent teacher will readily understand by the manifestation of these signs that relaxation is necessary before the pupil can attain to the normal state of mind and body indispensable to concentrated study. At such a juncture, let the teacher speak for a few moments on any relative subject that will furnish an excuse for a pause, or better still, draw the pupil into speech, using a brief conversation as a foil.

Tears! Is there one music student in the world who has not at some time wept in bitterness of spirit over ignominious failure! Perhaps Bach was responsible for it; mayhap a rapid passage in double sixths proved the *miserere*. Whatever the cause, defeat at lesson time or recital time was a cruel disappointment. Such tears, however, are not in anywise lost, for they show that ideals are being cherished which are not dimmed by vainglory; and they nearly always constitute the prelude to fresh and earnest effort. They are, moreover, life's portion, and sometimes form the mere accompaniment to the prophetic fall before which pride goeth.

But when a pupil has for days practiced anxiously almost desperately, upon a composition, and gives the teacher an unaccountably faulty recital, the tears that spring to the eyes at sound of his caustic comment or peremptory intolerance, are the fruits of his grievously erroneous judgment. In such a case, the pupil is far more pained by her deficiency than her instructor can possibly be, and a word of encouragement were more productive of desired results than edged reproof. If the master could but realize that under his sharp denunciation the Nervous Pupil is quivering from head to foot; that instead of quitting the studio with eyes shining and cheeks flushed by the exultation of achievement, she rushes from the place in a tempest of agitation; and in place of spending the rest of the day in joyful attempts to apply the information received at lesson time, she weeps for hours, and finally returns to the piano, her spirits weighted with dull misery!

In dealing with the Nervous Pupil, the teacher's watchword should be "Inspire," rather than "Coerce." Let him conduct the lesson as a series of wholesome but kindly suggestions; and while disdaining to pamper, let him occasionally apprise the pupil of her good points as well as her defects.

The teacher must, of course, in all such instances apply the sagacity of his own experience; but if with tactful admonition and penetrating discretion he renders the music lesson an occasion of hopeful endeavor to the Nervous Pupil, instead of the veriest nightmare, he will have taken a long step ahead in musical pedagogy.

CORROBOREES

It has been the custom to treat the corroboree as merely a wild native dance, but its significance is greater than this. As an art form it is akin to the modern musical comedy, but it is generally infused with a crude spirit of poetry, which the latter lacks Of course, dancing in some form or other is the natural expression of healthy human beings, and most races have their form of national dance. Of late years, however, these forms have been chiefly confined to the hired performers of the ballet and have lost their emotional meaning, but the corroboree is a genuine outlet to the feelings of the aboriginals. Into it they have woven all their tales of romance and their imaginative dreams.

Some of these corroboree tales have a pathos and poignancy which show a true literary instinct in their creators. Others have a quaint flavor of morality. Take this one, for instance, which is general in some form or other among all the Northeastern tribes: —

A native was returning from the hunt, with his bags laden with game. An innocent bird hovered above his head, and at length settled on a tree before him. Out of wantonness he lifted his boomerang and threw it with force at the bird. But it happened that the god Targan had known the wickedness of his heart, and had taken the shape of a bird to tempt him. So the boomerang flew wide of its mark, and, coming back with the swiftness of a lightning flash, struck its thrower dead to the ground.

There is a trace of universal morality about this that argues a people not altogether devoid of the ethical sense. To tell the truth, however, it is rather in the nature of an exception. Most of the corroboree tales have for their hero the wickedly clever man, or the strong pitiless overman, who treads every one mercilessly beneath him. Others are merely fantastic dreams. handed down from generation to generation, as the folk lore of the tribe. Here is one of the latter variety, paraphrased from the reminiscences of T. Petrie, one of the oldest of Queensland settlers: —

Three brothers living together on an island in the sea loved the same girl, the daughter of a great chief. In return she loved one of them, the weakest of the three, and at length married him. To hide her away from his brothers, he carried her to a cave under the sea, and daily brought her food. Their suspicions were aroused and they were eaten up with jealousy, but being double tongued, they coaxed her out with promises to build the couple a splendid new humpy. Then they did all in their power to kill their brother. One day on the beach he was caught fast in a shell, and they left him to die. But a bird, with blood dripping from its beak, told the girl of his fate, and she died of grief. The brothers thought that by finding her lover they could bring her back to life, but he had drifted out to sea, turning into a fish, and then into a beautiful colored rainbow. And she turned into the flowers of the bread fruit tree, so that they could always gaze upon one another.

It is curious to note that the aboriginals always persist that these stories come to them in their sleep. A man dreams a corroboree, and while it is impressed vividly on his brain tells it to the head of his tribe. If the latter finds the tale striking, and suitable for reproduction, a proclamation is made and the necessary performers selected. On some occasions a whole day is devoted to dressing and preparation, each man jealously concealing his form of adornment from his neighbor. To the onlooker, of course, there seems little variety in the garb, consisting as it does mainly of coats of grease and feathers fixed on with blood, but the diversity lies in the different patterns printed on the body with red ochre.

The duration of the performance is necessarily regulated by the nature of the subject. It is no uncommon thing for one to extend itself over five or six nights, but the simpler ones generally last but a few hours. Among these are the little lyrical folk songs, which the aboriginals love, and of which they never seem to tire, as for instance the story of the water lizard: —

A water lizard lay basking on a log by the creek. It was a warm day and the air was full of a pleasant heat. Presently a native came by and hunted the lizard away. As it slipped into the water it said reproachfully, "Why did you disturb me when I was happy in the sun?"

The substance of this is impressed into a few four-line choruses, and is sung over and over again. It is to be noted that in all these imaginative tales the lower animals take their place quite on a level with man. Birds and beasts reason with their hunters, or form leagues to outwit them. Emus and kangaroos take up their positions in the councils and corroborees. There is even a suggestion of a faunlike alliance with nature. In one tale a tree grows miraculously in order to bear a hunted man up out of reach of his enemies.

The longer corroborees generally consist of accounts of wonderful floods or bush fires. Generally, when a fight took place between two rival tribes, it was rehearsed in every detail, with a few warlike songs inserted describing the occasion. Once, during the early days of European settlement, a white man fell in love with a black girl. She would not leave her people to marry him, so he renounced civilization and went to live with the tribe. He proved a skilful hunter and fighter, and at length was made chief. The after generation of aboriginals grew to venerate his name like that of a god, and the legends of his prowess are the subject of many of their corroborees.

In the lengthy ones which last for several nights the preparations and staging are more elaborate. A spot is selected some distance from the camp, and a "green room" of boughs and bushes is erected to the right of the imaginary stage. When night falls the performers, who have spent the day arraying themselves, gather together in this structure, and await their turn expectantly. The audience assembles on the ground, the men seating themselves in front, and the women and dogs squatting behind. The native substitute for an orchestra is started by the men clashing their boomerangs together, and the women slapping their hands on their naked thighs. The performers file on singly, the leading man always going first. As each man advances he is received with special shouts of applause and comes to the front to make his acknowledgments. To the onlooker everything seems strangely suggestive of the civilized theatre. All the details are arranged with an ordered regularity which is not common among savage races. As the clashing of boomerangs ceases the leading man takes up the first line of the chorus, which is repeated again and again by all the tribe. It is characteristic of all the tales that they tend to be tragic. The aboriginals are on the whole distinctly a humorous people, but their humor is of a gay, lighthearted type, and finds little expression in their corroborees. The pathetic and the picturesque are the chief things that move them to artistic creation. — *From the Nineteenth Century.*

THE ROAD TO SUCCESS

The young man who, after making up his mind what he wants to do in the world, begins to hunt up obstacles in his path, to magnify them, to brood over them until they become mountains and then to wait for new ones to develop, is not a man to take hold of great enterprises. The man who stops to weigh and consider every possible danger or objection never amounts to anything. He is a small man, made for little things. He walks around an obstacle and goes as far as he can easily, but when the going gets hard he stops.

The strong man, the positive, decisive soul who has a program, and who is determined to carry it out, cuts his way to his goal regardless of difficulties. It is the wabbler, the weak-kneed man, the discouraged man, who turns aside, who takes a crooked path to his goal. Men who achieve things, who get things done, do not spend time haggling over perplexities or wondering whether they can overcome them. A penny held close to the eye will shut out the sun. When a man lies down on the ground to see what is ahead of him, a rock may hide a mountain. A small man holds petty difficulties so closely in view that great objects beyond are entirely shut out of sight. Great minds keep their eyes on the goal. They hold the end so persistently in view and it looks so grand and desirable that the intermediate steps, no matter how perplexing, are of comparatively little importance. The great man asks but one question, "Can the thing be done?" not "How many difficulties will I run across?" If it is within the reach of possibility all hindrances must be pushed aside. — O. S. Marden *in Success.*

BERNHARD STAVENHAGEN

JEAN PARKMAN BROWN

It was the last days of August, 1903, that after a enjoyable sea voyage from New York to Rotterdam, I arrived at Munich, and joined my uncle and aunt and two cousins. They had been doing Munich and were ready to depart and leave me, with my faithful young cousin L., to our own devices. Nearly every room in Munich was taken, for it was the second year of the Wagner-Fest. L. had managed to secure a room in the top story of the picturesque Hotel Leinfelder next to the Künstlerhaus. What delicious coffee and rolls and butter there were for breakfast in the little courtyard garden with the splashing fountain! The obliging Oberkellner and elevator boy became our good friends, and made sure that we saw all the celebrities who put up at the Hotel, from the American bishop to the tenor Kraus.

The people of Munich are not unlike the Italians in their friendliness and courtesy.

Munich, the Artist City, is justly so named, for in this city of southern Germany there is beauty everywhere. There in the galleries are the fine old Van Dyke portraits, the Reubens, and the Rembrandts with their mellow colors, — at every corner, a reminder of them in the interesting little photograph shops. The distinguished painter, Lenbach, was living in Munich at this time, and many of his portraits may be seen there. He was beloved and adored by the people.

To Munich, in his day, came Von Bülow, at the call of the young King Ludwig, who had many consultations with him for the improvement of the Royal Academy of Music. The present director of the Academy is Bernhard Stavenhagen. Early in September, accompanied by my devoted L., I went to the Academy of Music, to see if I could obtain permission to hear the different classes. We were referred to Mr. Stavenhagen, the director, and were ushered into his office. We found that the conservatory would not be in running order until the end of September, at which time I was obliged to be on my homeward voyage. However, Mr. Stavenhagen said that if I wished to hear *him* teach, I might come to his house, where he was teaching a young Polish girl of great talent. Of course, I gratefully accepted this very kind invitation. I asked him if he would be willing to play to me several times a week some of his own compositions, and other music, charging for his time as if he were giving me lessons.

The next morning I was at his house, taking with me his *Drei Clavierstücke*, Op. 2., Presto-Pastorale, and Caprice. He played them delightfully. He was going away for a few days to see his friend, Dr. Tausch; but he told me that on his return he would be practicing every morning, and that I might come and hear him if I wished. Wasn't this the kindest proposition to a stranger! During the first three weeks of September I was at his house every day or two. I heard him play several times his charming Op. 5, *Drei Stücke*, Capriccio, Intermezzo, and Menuetto Scherzando. One morning I took my copy of the Chopin Mazurkas, and he played several of them for me, — Op. 17, No. 4; Op. 30, No. 2; Op. 33, No. 3, etc. I was enchanted with his interpretation. He said he had them from Liszt. It is impossible to describe how he played them — the velvety touch, the absolute freedom.

Op. 17, No. 4. The first thirty-six measures were played delicatissimo, as they are marked, like an exquisite song. In the period of eight measures, beginning at measure 36, the rhythm was brought out more decidedly. One felt the passionate motion of the Mazurka. At measure 61, again, it was the movement of the Mazurka that one felt, and it was played somewhat faster from here to the double bar, as was also the period beginning at measure 36.

Op. 30, No. 2, was given with great fire. The part beginning at measure 32, where a melody of two measures is repeated eight times, was enchantingly played — the melody every time a little different.

BERNHARD STAVENHAGEN

Stavenhagen is very fond of the Chopin *Valse* (posthumous work), and I had the pleasure of hearing him play it several times. At measure 65 there is a charming period of sixteen measures marked "dolce." This he played with perfect simplicity of expression and a bird-like quality of tone.

One morning it was the great Schumann *Fantasie*, Op. 17, which Stavenhagen had on the piano. It is dedicated to Liszt, and bears this motto: —

> "Durchalle Töne tönet
> Im bunten Erdentraum
> Ein leiser Ton gezogen
> Für den er heimlich lauschet."
> — Fr. Schlegel.

When I left Stavenhagen, I went to a music store and brought the *Fantasie*, my copy being in America, thence to the Meyer piano warerooms, round the corner from our hotel, where I had arranged for the use of a piano by the hour whenever I found it convenient to come. Here I worked over the themes and harmonies of this great work, to prepare myself to hear Stavenhagen play the *Fantasie* again, and then in the evening at the hotel I studied a couple of hours in my room without a piano.

Besides this work with Stavenhagen, I was enjoying the advantage of hearing him give lessons to Wanda von Trzaska, the young Pole who made her debut in public this winter, and, as L. has written me, with great success in Berlin, playing, under Stavenhagen's direction, his B minor Concerto for piano and orchestra, and the Liszt Concerto in A major. At the first lesson I heard her take, she was playing the aria from Schumann's F♯ minor Sonata, Op. 11. It was superb piano playing. She had brought no music — I never saw her bring any. Stavenhagen would open his at a desk, and part of the time direct from there. I heard her play again part of the F♯ minor Sonata, one Saturday. Afterward, Mr. Stavenhagen played part of the Schumann *Fantasie*, again, as Wanda von Trzaska had never heard it from him, then the three Chopin Mazurkas, and some Liszt Transcriptions, and his own Intermezzo from Op. 5.

I shall long remember the last Sunday morning we were in Munich. Wanda von Trzaska, L., and I spent it at Mr. Stavenhagen's apartment, Wanda von Trzaska playing in a way to arouse Mr. Stavenhagen's enthusiasm, and the piano under his hands was a perfect instrument.

It was with great regret that L. and I were obliged to leave Munich, but the music we had heard will be a pleasure for years.

SENTENCE SERMONS

A difficulty is at the door of every delight.

Gold fetters are not more elastic than iron.

Respectability is no substitute for repentance.

It takes a great man to do little things well.

The gold of grace does not come from the greed of gold.

A little patient pushing is worth a profound lot of puffing.

It is no use praying for your debtors if you won't pay your debts.

A man loses force as soon as he begins to worry over his feelings.

You know what a man lives for when you know what he looks at when alone.

Many people think they are living for character who are only fighting for reputation. — *Chicago Tribune.*

The talent of success is nothing more than doing what you can do well, and doing well whatever you do, without a thought of fame. — Longfellow.

Necessity reforms the poor, and satiety the rich. — Tacitus.

I like the laughter that opens the lips and the heart — that shows at the same time pearls and the soul. — Victor Hugo.

Selfish ambition may help us to climb to the point where we may be seen, but it never aids us in climbing to where we can see. The higher a man gets in the world in pursuit of selfish aims the narrower his field of vision becomes. The higher he gets in the pursuit of unselfish aims the farther he can see around him. It matters little whether we climb in life if we do not climb toward a higher point of vision. — *Sunday-school Times.*

THE IDEAL LESSON

"Preparation of the head makes an *interesting* lesson. Preparation of the heart makes an *effective* lesson." Preparation of both the head and the heart makes an *ideal* lesson.

ORGAN DEPARTMENT

ANSWERS TO QUERIES

M. H. M., Lebanon, Ky.

In answer to your queries will say, —

(1) The best way, perhaps, to keep dampness out of an organ is to have a gas jet placed at some convenient location in or near the interior, and kept lighted all the time, sufficiently to maintain an average temperature of about 70°. The flame should be surrounded by a wire screen, with a top piece of tin within two inches above it. To maintain an even temperature it would be necessary for you to watch the flame with some care, otherwise it might create either too much or too little heat, and the varying seasons would also prove a factor in the condition of affairs. The question of dampness within an organ has been, and is, a subject of much trouble, not only to organists but to church committees as well. Many remedies have been suggested, but that above stated has probably proved the most effective thus far.

(2) A reasonably rapid stroke of the piston will not injure the motor if other conditions are favorable. But the stroke must not be so fast as to strain the bellows in any way, and this will depend somewhat on the number of inches of wind pressure. Most organs are deficient in this respect, so that scarcely enough wind is furnished when "full organ" is required. The motor should only pump fast enough to make the bellows work if necessary to capacity without straining.

Your note on the organ built by the late E. L. Holbrook of Medway, Mass., is timely and interesting. We think that he was the same person as designated in the firm name of Holbrook & Ware.

We think also, that it is wise for you to do "substitute" work as you state. By doing so you will obtain valuable insight of what may be called the "business" of which every organist engaged in playing the ritual of the Episcopal Church should be fully conversant, and which is only acquired by constant association and practice. Most of our distinguished organists were substitutes in the early years of their artistic careers, what is called in England "deputies."

M. A. P., Harvard, Ill.

The marks to which you refer, found in the Schubert arrangements for harmonium or reed organ, signify as follows: —

Over right-hand stave: (1) Flute, (2) Clarinet, (4) Oboe.

Over left-hand stave: (1) Cor anglais, (2) Bourdon, (4) Bassoon. An "O" within a circle signifies Forte. "S" signifies the stop is to be half drawn. A line drawn diagonally across the sign means that the stop is to be pushed in. For the full table of these indications, consult Reinhard's *Harmonium School* (Peters); price, $2.00.

The stop names of the foreign harmoniums vary somewhat from those by American makers.

NEW ORGANIST FOR MELBOURNE

The position of municipal organist in Melbourne, Australia, or as it is called locally, organist to the City Council, which has been vacant for some little time, is now filled, temporarily, at least, by the appointment of Dr. William G. Price, who will act in his new official capacity for one year from September 1. He receives a salary of about $2500, and he will give bi-weekly recitals in the Melbourne Town Hall. Dr. Price was serving in a similar capacity to the city of Belfast at the time of his new appointment, as well as organist of St. George's Church in that city. The appointment of Dr. Price is considered to be a most excellent choice, and was made on the recommendation of Sir Frederick Bridge, organist of Westminster Abbey, and T. H. Collinson, organist of St. Mary's Cathedral, Edinburgh, the committee appointed by the Melbourne authorities to examine candidates and make a selection.

It may be said in this connection that many of the large cities of Australia adopt the English custom of giving many public organ recitals each year, and to this end they own large instruments and maintain a regular municipal organist. The organ owned by the city of Sydney, it will be remembered, is one of the very largest in the world, and there are many others in that part of the world of exceptional size. The organ in Melbourne was originally built by William Hill & Son, in 1872, and cost some £7000 or about $35,000. Two or three years ago, the organ was rebuilt with a modern electro-pneumatic action and all other up-to-date improvements by Ingram, Hope-Jones & Co., of Hereford, and the expense of reconstruction was £4500 or $22,500. In its remodeled state the organ possesses five manuals and pedal, with over 75 speaking stops, and all the latest accessories, composition pedals, bass attachments, key touches, extension octaves, etc. One of the five manuals is the echo organ, prepared for only and placed in the south gallery of the hall. The manual compass is 61 notes CC to C, 73 pipes, pedal compass CCC to F, 30 notes. The organ was officially "opened" on July 4 last, with a recital by E. H. Lemare, who has been giving numerous recitals in Australian cities during the past few months. It is stated that a permanent organist for Melbourne will be selected during the coming year. The choice may come to Dr. Price, if he fills the position with acceptance, or another may be selected in any event. At present nothing definite is known as to the outcome.

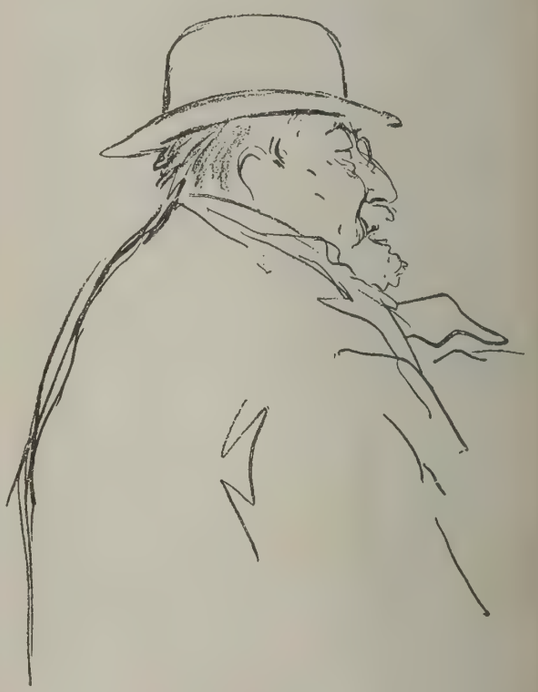
SAINT-SAËNS AS AN ORGANIST

The expected visit to America this season of Camille Saint-Saëns, the distinguished French composer, conductor, pianist, and organist, has again brought him prominently before the musical public, a portion of which had begun to consider him a back number and not to be compared with Vincent D'Indy, Claude Debussy, and others of the newer French school, who are keeping the wise ones guessing with their musical experiments. But Saint-Saëns is still a shining light among his contemporaries, and at the age of seventy-one is still active both as creator and interpreter.

It is perhaps on one of the lesser discussed sides of his genius that this article will briefly speak, that is, as organist and composer for the organ. Saint-Saëns has of late years given less attention to this side of musical art, but he probably acquired his early reputation as much from his abilities as an organist as from any efforts of his in other directions.

Before his sixteenth year Saint-Saëns had acquired much ability as an organist. At the conservatory he was a pupil of François Benoist (1794–1878), one of the most distinguished exponents of the king of instruments in his time. Saint-Saëns studied to such good purpose that he won first prize in this department. He evidently had a liking also for the harmonium or reed organ, for his earliest numbered *opus* is for this useful but now much despised instrument.

Saint-Saëns' earliest position as organist was at the church of St. Merry, which he assumed in 1855, at the age of twenty. His exceptional technique, brilliancy, and skill in improvising were becoming known not only in Paris, but elsewhere. This increasing reputation three years later, secured him one of the leading positions in Paris, as organist at the Madeleine, where he succeeded Lefebure-Wély (1817–1869). At this celebrated church Saint-Saëns made his reputation as one of the greatest organists of the time. The organ was among the finest examples by the distinguished builder, Cavaillé-Coll, and was well adapted to exhibit the exceptional powers that Saint-Saëns possessed for improvisation, brilliancy in style, and all these, together with the well-nigh marvelous effects in registration obtained by him, are vividly remembered by all who had the good fortune to hear him. He remained at the Madeleine until 1877, when he was succeeded by Theodore Dubois.



SAINT-SAËNS — PENCIL SKETCH

Since then Saint-Saëns has filled no regular position as organist, but has played at frequent intervals in the many places he has visited. Neither has he contributed much to the literature of the organ during recent years. The following list of his organ compositions will show that most of them were the product of his earlier years. Nearly all of them are most interesting examples of their class, and should be in the library of every organist. The list includes those for the harmonium as well as for the larger instrument.

Three pieces for Harmonium, Op. 1. Composed in 1852, published in 1858. These include a Meditation, Barcarolle, and Prayer.

Three Rhapsodies upon Breton Folksongs, Op. 7, composed and published in 1866. These are among the best known of any in the list.

Benediction Nuptiale, Op. 9, composed in 1859 and published in 1866.

Elevation or *Communion*, Op. 13, composed and published in 1865.

Three Preludes and Fugues, Op. 99, Book I, published in 1894.

Fantaisie, Op. 101, published in 1895.

Marche Religieuse, Op. 107.

Three Preludes and Fugues, Op. 109, Book II.

Fantasie (without opus number), composed in 1856.

Of these, Op. 7 and 13 are adapted for Harmonium by the author. The following works or excerpts have been transcribed by various organists as noted.

Extract from Mass, Op. 4, transcribed by the composer.

Prayer from *Noël*, Op. 12. (J. Permann.)

Tollite Hostias, chorus from *Noël*, Op. 12. (E. Gigout.)

Andante from sonata for Piano and 'Cello, Op. 32. (H. Busser.)

Marche Heroique. (A. Guilmant.)

Prelude from *The Deluge*, Op. 45. (A. Guilmant.)

Sarabande from *Suite*, Op. 49. (Gaston Choisnel.)

Evening Reverie from *Suite Algerienne*, Op. 60. (A. Guilmant.)

Hymn to Victor Hugo, Op. 69. (A Guilmant.)

Adagio from Third Symphony, Op. 78. (Emile Bernard.)

Berceuse, Op. 105. (A. Guilmant.)

La Cygne, excerpt from *Le Carnéval des Animaux*. (A. Guilmant.)

Marche du Synode from *Henry VIII*. (Leon Boellmann.)

The Nightingale and the Rose, from *Parysatis*. (L. Courtade.)

Prelude to Act 2 of *Proserpine*. (H. Busser.)

THE SLIGHTED CHORUS MAN

Gratuitous and misplaced scorn is being heaped by some of our contemporaries on the "chorus man." Truth to tell, he is not an imposing figure in comic opera or musical comedy. He is tolerated on the stage only as a background, a merry villager, a soldier, a brigand, one of a group of college students. Occasionally he gets in the foreground, playing opposite the members of a Florodora or other sextet, but even there the smiles and wiles of his charming partner are not for him, but for the collective masculinity on the farther side of the footlights.

What we object to, however, is the assumption that just because, dramatically, he belongs to the ranks of unskilled labor, the chorus man is deemed beneath contempt. As a matter of fact, he fares nearly as well as the men principals in musical comedy. The trouble is with his sex, not his salary. Who cares anything about the basso or baritone or tenor in the musical hodge-podges of the moment — respectively the father, the neglected suitor, and the accepted lover of the girl in the case? These gentlemen may sing and gesticulate and attitudinize as fervently as they please, but the eyes and ears of the public are not for them. The eyes are for the young women principals and their sprightly sisters of the chorus, the ears are for the comedian. By the composer the principal man is treated much better than the "chorus man," but not perceptibly better by the audience.

The joint worship of mere feminine beauty and of grotesque humor has operated to deprive musical comedy of the excellences and symmetries possible to this very elastic form of art. The "chorus man" and the lover man are still included in the cast, but both go for naught. Music is still written which presupposes the possession of a singing voice, but its effect is sadly marred because the ability to sing is not required of the pretty young principals, and is seldom displayed by them. If it were held that youth and beauty, with a grotesque comedian for a foil, were not enough in themselves to carry a show, we might again have evenings of well-balanced entertainment, real singing by the principals, an effective use made of the men chorus in marches and glees, and good music written for it.

There is no valid reason why the "chorus man" of comic opera should not be as potent a factor in the musical *ensemble* as he is in grand opera.

THE EVOLUTION OF THE PEDAL ORGAN

H. J. STORER

The organist of the present day must possess as much of a pedal technique as that of the various manuals, his feet must move as independently as his hands, and be fully as important in every way. And to aid the organist in the development of up-to-date foot work he has two or three styles of pedal boards at his command, with a compass greater than ever, also his feet can utilize a greater number of registers, and aided by an electric action, he can play nearly as rapidly as on a pianoforte. It was not always thus, for not so very many years ago an organist who could play with both feet was regarded by many as a "wonder," and in fact on many organs it was impossible to play otherwise than with the left foot, owing to the limited compass of the pedal boards made a generation or two ago.

The evolution of the pedal organ was at first not so rapid as that of the manuals, and for a long time was considered of secondary consequence. It is interesting to note the beginnings of this now absolutely essential part of a modern organ, and to trace the development from its crude beginnings unto the present. It is not certain where or when the idea of pedals was conceived or by whom. It is stated that Albert Vos was responsible for the idea in the early part of the twelfth century. He is the earliest organ builder of which there is a definite record, and the instrument he constructed in the St. Nicholas Church at Utrecht is quoted as the best existing example of the period. But no pedals were found in this instrument. Another "originator" was stated to have been Ludwig Van Valbeke of Brabant, a locality that Wagner has made familiar in *Lohengrin*. Then a German builder named Bernhard is mentioned either as inventor or improver of the pedal board. However, the pedal scheme was undoubtedly in a crude way in use in the fourteenth century. For many years the compass was but a single octave, and the notes were only B natural, C, D, E, F, G, A, H (B natural). Their use was in this early period entirely for the holding of long, sustained notes, for in fact no other use was possible. There were no separate pedal pipes, and the pedal keys merely sounded the corresponding notes on the manual clavier, to which they were attached with cords. Rather a crude sort of action one may well say, when the twentieth-century action is considered. This early primitive pedal action naturally could only be applied when the pedal keys were made to a similar gauge to those in the manual. This idea of a similar gauge for both manual and pedal was utilized by the builder Georgius Kleng, in the pedals added by him to the historic organ at Halberstadt, about the year 1495. This set of pedals possessed the chromatic notes of the manual to which they were attached in addition to the diatonic notes previously mentioned.

It is said that in the early part of the fifteenth century the first stop or register of independent pedal pipes was invented, the so-called "Pedal Bass." This was a most important invention, which made possible the increase of volume and dignity of the organ tone, which up to this time was more or less lacking. Who invented the first independent pedal register is only a matter of conjecture, and where it was first used is equally uncertain. When the German builder Marx built a new organ for the church at the little village of Beeskow, a few miles from Frankfort-on-the-Oder, in 1818, he found that the old organ, removed by him, was built in 1418 as the date was inscribed upon the upper side of the partition of the two principal pedal pipes — they were such from the measurement.

Undoubtedly in Germany during the fifteenth century various improvements were conceived; such as the addition of semitones, the frame for the pedal keys, the separation of the large 32 ft. stop from the manual, and applying it to the pedals exclusively, also the use of rollers in place of ropes or cords, when the manual keys were made smaller than the pedals. The compass, however, was unchanged until a comparatively recent period.

Gradually additional pedal stops began to be used. In one of the best of the old German organs at St. Mary's, Lubeck, built in 1518, there were several, and the number was afterwards increased to fifteen stops, the number existing in the beginning of the eighteenth century when Buxtehude was the organist.

While most of the German organs built previous to 1700 had pedal boards of limited compass, none of the famous English organs had them, until as late as 1790, incredible as it may seem, and there is no record as to who first employed them in that country. Probably the first organ in England to possess a pedal keyboard was that in St. James' Church, Clerkenwell, built by G. P. England in 1790. This pedal board was of a single octave in compass, GG to G, and possessed no separate registers, simply playing the manual keys.

England was a progressive builder who saw the advantage not only of separate pedal registers but of an increased pedal compass as well. He built an organ in 1811 for the Lancaster church with an octave and a half pedal board, and some of his earlier organs had separate pedal pipes, as for instance the Newcastle organ (1803).

Other builders began to make large pedal pipes and increase the compass of the board, but for years there was no established scale. That most in use during the early part of the nineteenth century consisted of an octave of double pipes CC to CCC, with five unison pipes BB to GG. Thus it will be seen that the five keys at each extremity of the board had no difference in pitch in any of the five notes.

J. C. Bishop built a pedal board of two octaves and three registers of twenty-five pipes each in the organ in St. James' Church, Bermondsey, in 1829. At this time playing the pedals was strenuous in the extreme, and continued to be so until the invention of the pneumatic lever, thought of by Joseph Booth about 1827, and improved by Barker, whose invention was utilized by the French builder, Cavaillé. With the improved touch, made possible by the pneumatic lever, came another idea, the radiating pedal board, used first, so it is said, in the organ at York Minster, built by Elliott and Hill in 1834. At this time there were many little defects in the pedal board and the pedal registers which the late organist and composer, Dr. H. J. Gauntlett, endeavored to remedy by having introduced some of the improvements in use in many of the large organs on the Continent. This was probably about 1840. The need of a separate and independent pedal organ was admitted. The need of remedying the evil of half and incomplete stops, which made rapid change of register impossible, was also recognized. Then there was the anomaly of two octaves of pedals and only a single octave of pipes, repeated.

This so-called "return" action was at length a thing of the past, for in 1842 the organ at the Worcester Cathedral, built by Hill and Sons, had the six registers the same as the keys. Here was now a two-octave pedal board with varying registers, some with pneumatic action, a few with radiating boards, most of them, however, with the straight flat board.

The invention of the electric action, nearly forty years ago, and vastly improved since that time, has made pedal playing comparatively easy so far as muscular energy is concerned. Now there exist at least three kinds of pedal boards, the flat radiating, the radiating concave, and the straight key flat board. The compass has gradually increased from a single octave to two octaves, twenty-seven notes, and now the larger organs have a pedal compass of thirty notes or more. So much for compass and ease in manipulation. Now as to registers. Once there were no independent pedal stops, as one has learned, then there were 16 and 8 ft. registers, and the variety now is exceedingly great, including nearly everything, from a 32 ft. Open Diapason with a 16 ft. reed stop to little 2 and 4 ft. registers. One can easily play solos with his feet and accompany with the hands, and also realize innumerable other effects. The days when to do pedal "stunts" for the edification and wonderment of the "gallery" are now past. A pedal technique is a means to an end, to help interpret in the highest artistic manner. And the electro-pneumatic action, the infinite variety of registers, and the radiating pedal boards are the means whereby the twentieth-century pedal technique has been made possible of realization.

THE SOLO IN CHURCH MUSIC

The introduction of solo passages into the music of the church is comparatively modern. No doubt when music was so undeveloped as not to employ harmonic and contrapuntal effects the singing was in unison and not infrequently the musical part of the service was rendered by a single voice. But when ecclesiastical music became a highly finished form of art, when in the time of Palestrina, Orlando di Lasso, and Tallis it produced its masterpieces, the effects aimed at were based upon the contrapuntal treatment of several parts heard simultaneously. It was not necessary that each part be taken by a number of singers. In many cases each part was rendered by a single well-trained voice. But as there was no instrumental accompaniment and the passages in which a single part appeared without the other parts were the mere announcement of a theme, there was not what is understood at the present day as a solo passage. It was a time when the choir was treated as a whole, in which there was no chance for the display of those characteristics which make solo singing so attractive in its proper place, and distinguish its effect from that of the same melody sung by a body of singers.

The principal characteristic of the solo is that it allows the voice to be used so as to express the sentiment of the individual singer. There is not the same neutral quality of expression, the same generalization of the tone, if one may so speak. It is, if well rendered, vibrant with personality. To a certain degree it is the same in the case of the instrumental solo. We have heard Handel's well-known largo played in unison by all the first violins of the Boston Symphony Orchestra! It was not merely a louder and fuller tone, or a performance with different expression. It was a different sort of tone and without that individual quality of expression which makes the solo what it is.

It may be asked very properly if the character of ecclesiastical music, except when a more or less dramatic text is set, admits of this sudden change from the wholly general and impersonal sort of singing, which belongs to the choir, to the solo with its wholly different aim and effect. We confess that we have felt the incongruity at times which we did not feel when we have heard a single voice sing the entire service. Occasionally, as in Mendelssohn's *I waited for the Lord*, where there is an admirable weaving together of the individuality of the solo singers and the chorus, there is no clash. The situation admits such treatment. But it is different in a canticle or anthem that calls for united rather than individual expression. Thus in the Te Deum or Creed, the introduction of solo passages unless handled with extreme tact is very apt to cut the whole up into more or less detached fragments. Even after the best handling of a passage by the composer, the endeavors of the singer, properly anxious to do his best in the part in which he is heard alone, are apt to spoil the effect of the anthem as a whole.

There is, however, another point of view. The solo is often not introduced dramatically at all, but to give a different tone color. Several voices of a similar quality heard singing together produce an effect different from any one taken separately. It is the same in instrumental music. The violins of an orchestra may be so much alike that only a trained ear can distinguish one instrument from another, even when played separately. Yet the instant the melody is played by the solo first violin or solo 'cello, it is easy to detect the difference between the quality of its tone and that of all the violins playing together softly. The composer of vocal music has not the same advantage the composer of instrumental music has in his various instruments of the same pitch and in the different ways in which the same instrument can be played. The violinist may play a passage upon a single string, for the G string sounds quite different from the D or A when used for the same melody. There is the pizzicato, the harmonic tones, the ponticello playing. The individual voice may do much by way of expression, but nothing equal to these differences in quality. In the choir there is still less variety, though the distribution of parts does much. The introduction of the solo is a most useful means of varying the tone color of the composition, and it is accordingly justified.

There is obviously a difficulty produced by the clash between the different points of view. On the one hand, the individuality of the solo often makes its introduction dramatically incongruous. On the other hand, the difference in tone makes its introduction desirable. A compromise must be brought about, and it is a test of the artistic sincerity of the performer the way he makes his solo a part of the whole effect. One recalls a notable passage given to the first oboe in Brahm's Third Symphony. A lovely melody was for many measures accompanied in the simplest style. It would be not unnatural for the oboist to have treated the passage as his opportunity for displaying his personal interpretation of the passage, to have breathed into it all the passion of his soul. It was a most dangerous passage for any one not willing to sink himself unreservedly in the whole. Yet we have heard it played perfectly. The playing was neither unemotional nor too prominently individual. There was a compromise effected between the two aims. The same sort of compromise should be introduced into ecclesiastical music whenever a solo forms part of the composition. The individual expression must be brought into conformity with the spirit of the whole piece. The choir must seem to change its tone rather than to hand the music over to a single voice. It must be like the change that an organist is able to make by altering the registration in the course of a composition. Of course, this cannot be attained completely in the case of a vocal solo, and it is not on the whole desirable that it should be. There should be a compromise. The voice will be heard solo and judged as such; it will be heard as part of a choral whole and judged as that as well. It will be a compromise at the best. It will call for much self-repression. It will be hard to get singers to do this, especially as is often the case the solo is treated as something quite apart from the rest of the choir singing. Accordingly, everything should be done to make the solo as inconspicuous as possible. The practice of having the solo singer of a chancel choir stand facing the congregation in a solo is to be avoided. It may be well even to have the soloist stand not at the end of the choir stall, but second or third, that the personality of the singer may be kept in the background. It is especially desirable that the soloist be a regular member of the choir, accustomed to sing chorus parts, and otherwise feel himself as merely one of the whole. No doubt this will be difficult, but it is the only way to keep the solo from degenerating into a bit of show work, or decoration.—*Church Standard.*

THE BROKEN VIOLIN

Ole Bull, the great violinist, was born with a genius for music. To him the swaying of bluebells, the wind and rain and waterfalls, the music of birds and bees, — all these were the voices of Nature, and he tried to reproduce them on his violin.

It is said that the musician's first violin was given him by an uncle when he was but four years old, and his delight at the present knew no bounds.

"My father wanted me to be a minister," said he in telling the story many years after, "and I thought I must do as he wished. But when I was eight years old he bought me a new violin and arranged to have me study under a teacher, 'for,' he said, 'a minister ought to know a little about music.' That night I could not sleep. I rose in the night to get a peep at the precious violin. It was so red, and the pretty pearl screws did smile at me so! I pinched the strings just a little with my fingers, and it smiled at me more and more. I took up the bow and looked at it. It said to me it would be pleased to have me try it across the strings. So I did try it just a very, very little, and it did play so softly. I forgot that it was midnight and everybody asleep, and the next minute I felt my father's whip across my shoulders. My little red violin dropped on the floor and was broken. I did weep very much for it, but it did no good. They did have a doctor to it the next day, but it never recovered its health."—*Detroit Free Press.*

NOTES

The National Conservatory of Music, 47–49 West 25th St., New York, will have for its director this coming year Wassili Safonoff, the distinguished Russian conductor, pianist, and teacher. Mr. Safonoff, who is also the conductor of the New York Symphony Orchestra, will have a piano class at the National Conservatory, also conduct the Conservatory Orchestra, and have a class for conductors, — the only one of its kind excepting that at the Leipsic Conservatory under Arthur Nikisch. Besides Mr. Safonoff, the artistic faculty will include Adele Margulies, Leopold Lichtenberg, Eugene Dufriche, Leo Schulz, Max Spicker, Charles Heinroth, Henry T. Finck, and many others.

* *

Paul Ottenheimer, Kapellmeister of the Stadttheater in Nuremberg, has been appointed Kapellmeister of the Opera at Prague, to fill the place vacated by Leo Bleck, who goes to the Royal Opera in Berlin, to succeed Karl Muck. There were 119 applicants for the position. Bleck made his last appearance in the Bohemian capital late in September, with a performance of *Tristan und Isolde.*

* *

The recent performance of *Parsifal* in Bayreuth revealed a new artist of great promise, Aloys Hadrviger of Graz. He made his first appearance two years ago in Bayreuth at the age of twenty-two in the rôle of Frohe in *Rheingold.* He sang the rôle of Parsifal with a fine and expressive voice, but also with many awkward gestures.

* *

Raoul Pugno has been engaged as soloist for the coming Scottish Orchestral Concerts.

* *

Mascagni's successor at Pesaro, Amilcare Zanella, is also a composer, and belongs to the Liszt school, inasmuch as he composes symphonic poems. His *Faith* was produced at a recent concert by the Scala Orchestra in Milan, and was favorably received.

* *

Frankfort, Germany, will continue its policy of having "guest" conductors. The concerts of the coming season there will be presided over by Motti, Mahler, Strauss, Nikisch, Steinbach, Toscanini, Mengelberg, Wolfrum, Henry Wood, and others.

* *

Smetana's opera, *The Bartered Bride*, had a festival performance at Prague on May 30 to celebrate the fortieth anniversary of its original production there. Since that time it has been sung no less than 440 times. A work which has stood such a test surely deserves a hearing outside of Bohemia, too. The same may be said of Dvorák's opera, *Dimitrij*, which has been sung so often that the scenery has had to be replaced by a new set.

* *

A Song on Its Travels

Popular songs travel far these days, especially when they are engraved on the record cylinder of the common phonograph. Sidney Low, describing the Kumbh Mela, or pilgrim fair, held once every twelve years near Allahabad, says that he entered a large open pavilion where worship was going on. Men sat in rows while a reader recited passages from the *Granth*, the sacred volume of the Sikhs.

"There is an instrumental accompaniment," Mr. Low writes. "One man beats a small tomtom, another performs on a kind of concertina and the brass bell mouth of a phonograph yawns beside him.

"It is thought the visitors might like to hear the phonograph. The reader stops and the machine — a very bad one — grinds out what I presently discovered to be an English lyric, painfully familiar. *Won't You come Home, Bill Bailey?* asks the wheezy phonograph in a cockney accent.

"The old priest leans on his stick and beams with pride, and the black-bearded worshipers look on with unrelaxed features. Perhaps they thought they were listening to a devotional melody." — *Chicago News.*

THE CULTIVATION AND PRESERVATION OF THE VOICE

W. H. GRIFFITHS*

I

One of the first things which strikes the thoughtful observer is the fact that many people sing well without any thought about the matter, while a vastly greater number are constantly striving in vain to become proficient in the art, yet never seem to arrive at anything beyond indifferent mediocrity. That is to say, no matter how many years they devote to the study of singing, there always seems something incomplete, something inartistic, an indecipherable emptiness, the emptiness of a voice deprived of its inherent charm; a voice possessing little beyond monotonous sonority or shrill metallic velocity, which the merest tyro in vocal criticism would hesitate to applaud as art.

We hear beautiful singing in most unlikely places. With all the apparent advantages which the educated and cultured persons possess, beautiful singing is by no means their exclusive prerogative. Education — that is, the education which our young folks receive at school — seems to have little or nothing to do with it.

Here is a slim young girl in her early teens, born on a small farm away up among the hills. Education? very little, social influence? less, and yet, what a voice, what charming refinement of expression as she sings that old-fashioned folk song. Whence did it all emanate? "Well," her mother informs you, "my daughter has sung almost from her birth. When quite a little mite she would rock and sing until the tears streamed down the cheeks of the silent listeners, — tears of sympathy with the exquisite pathos of the simple, heart-searching melody." One day the minister called and heard the child. That settled it. The girl must have proper training, must be placed under a good master. A girl with so great natural talents will one day make a name; and the old clergyman was not far wrong.

Then again you hear a young collier singing lustily as he proceeds to his daily toil. Oh, the beauty of it; the superb delicacy of modulation, the easy, unrestrained flow of grand majestic sonority. Let us accost him. Lessons? none, except a few hints from the choirmaster at church, the choirmaster being himself a collier, and a little instrumental assistance from the organist, an ardent, enthusiastic amateur who loves music for its own sake and the joy it gives to others. What a grand voice, what an exceptional artistic temperament. This man is fit to take his stand among front rank singers. He must be trained.

Such cases plentifully abound. We are rich in song and vocal tradition. People, then, sing well because they have natural talent and the true artistic temperament. Each district of our country possesses its local dialectic charm, from the drowsy folk song of the southern counties, with its Old-World simplicity of form and sentiment, to the stirring drone of the Scottish slogan, reminiscent of the tramp of bare-legged borderers and the rattling days of bonny Prince Charlie, or the joyous lilt of the Irish peasant, begotten of long ages of native intercourse with green turf and slippery bog, with sombre, silent mountain and placid lake, not to speak of jaunting cars, potheen, and shillalahs.

Our sea songs alone are a national institution, and it is as natural for the fisherman to troll his "chanty" while hauling in the slack of a bowline as it is for the landsman to brag and boast of the sweeping victories of Nelson. Throughout every age the sea song has held its own in British esteem, and few names stand so prominent in public regard as those who wrote of the sea and the sailor, the most prolific of which was Charles Dibden and Henry Russell.

*Lecturer on Vocal Science to the Lancashire and Cheshire (England) County Councils. Author of *The Mixed Voice and the Registers, Daily Studies in Speaking and Reading, Singing Class Instruction*, etc.

II

Are we a musical nation? I do not know, perhaps not; but if you ask, Are we a nation of singers, the answer is, emphatically, Yes, very much so, and the million-tongued echo of public opinion flings back a thundering chorus of approval.

But, argues the captious critic, you have thrown out a covert suggestion that singing is not music. Have I? Well, it all depends upon what we call music. If you live in one of a terrace of houses in the suburbs, where the junior members of each household play — or shall we say perform — for so many hours a day upon a more or less accurately tuned piano, nothing could induce you to call that conglomeration of sound music. They do not call it music themselves, for they tell you they *play* the piano.

W. H. GRIFFITHS

Yet, if a poor, half-starved gutter singer passes your drawing-room window as he sings his humble ditty for your edification and his own financial benefit, and if he throws into his singing anything like the true sentiment of the song, your forefinger and thumb wander unconsciously to the pocket where the spare coppers are generally to be found, and while the peripatetic son of Apollo is rewarded according to his merits, you automatically help to clench the argument that singing is music, — music that appeals directly to the heart of the listener, even if the operator be a street singer.

Some one has written that a good voice constitutes three fourths of the ingredients necessary to make a successful concert singer. If this were true, the country would be overrun with talent, for good voices abound in every direction, and yet, fine concert singers are scarce. With plenty of good singing there are few really good singers. Why? Much of the scarcity is due to the absence of the necessary physical and mental vigor. Many promising vocalists collapse either in the training, or at a later period, under the unconscionable strain of professional existence, with its unceasing round of practice and its interminable railway traveling under all sorts of adverse conditions, the most common of which are rain, snow, and fog.

Only last winter a whole concert company traveling to Leeds on a certain Saturday afternoon were snowed up in a wild gulley and never reached their destination, but were compelled to return to town late on Sunday afternoon, a woefully bedraggled lot, weary, hungry, and worn to the bone with bitter cold and still more bitter disappointment.

To ensure success as a singer it is necessary not only to have a good voice, natural talent, and a keen artistic temperament, but considerable physical and mental powers. Singing has frequently been spoken of as a form of physical culture, — a form requiring long and patent training of the vocal organs. It requires a constitution equal, if not superior, to that of the professional athlete, and yet for all that our young vocalists must not be trained like a regiment of soldiers.

The vocal organs are of delicate construction, are wonderfully wrought, and possess a most fragile complexity of material. They demand such gentleness of treatment as will ensure firm muscularity of tissue, flexible elasticity of ligament, and absolute control of the nerve forces, without which the voice cannot be preserved intact against the excessive ravages of wear and tear, of approaching years, of such a variable climate, or the thousand and one additional impediments which threaten to mar the complete success of the professional singer.

Let the training be long, — the longer the better; let the steps be very gradual, each stage of difficulty approached and perfected one by one, each overcome before the other is commenced. The end may be longer in coming to view, but the results will be far more lasting and satisfactory.

But we hear a young singer impatiently exclaim, I don't wish to be a professional singer. I sing simply because, having a good voice, it gives my friends pleasure to hear me. They invite me to their homes and I enjoy going. Just so, just so, and yet one half your pleasure evaporates if some one sings with more perfect taste or engaging style. To you the message comes with equal sternness. Whether for personal gratification or financial profit, it is your imperative duty to perfect the organ you profess to perform upon. If you fail in this, others will supersede you by dint of sheer academic merit and ability, and you will meanwhile sink to a very ordinary level from the lack of necessary culture.

The human frame never stands at any one particular level; if rationally employed, it grows and develops, but if kept inactive, it deteriorates, and the deterioration is far more rapid than the development.

(*To be continued*)

MUSIC BUILDS CHARACTER

Good music is a powerful tonic to many people, especially those suffering from melancholia. It lifts them out of their solemn moods, dispels gloom and despondency, kills discouraged feelings, and gives new hope, new life, and new vigor. It seems to put a great many people into proper tune. It gives them the key-note of truth and beauty, strikes the chords of harmony, dispels discord from the life, scatters clouds, and brings sunshine.

All good music is a character builder, because its constant suggestion of harmony, order, and beauty puts the mind into a normal attitude. Music clears the cobwebs out of many minds, so that they can think better, act better, and live better. Some writers are dependent upon music for their inspiration and their moods. Somehow it brings the muse to them. It adds brilliancy to the brain and facility to the pen, which they cannot seem to get in any other way.

Good music seems to give us a touch of the divine, and to put us in contact with divinity. It drives out evil thoughts, making us ashamed of them. It lifts us above petty annoyances and little worries of life and gives us a glimpse of the ideal which the actual is constantly obscuring. — Orison Swett Marden, *in Success Magazine.*

AN ALPHABET FOR MUSIC TEACHERS

FAY SIMMONS DAVIS

AIM to be prompt and upright in all business dealings, and systematic in all musical matters. All artistic temperaments ought to be tempered. A man all "temperament" and impulses will soon find himself shoved aside in this practical land of the stars and stripes.

BEFORE you attempt to instruct another, be as sure of your ability to *impart* your knowledge as you are that you *possess* knowledge.

CAUSE loving respect to glow in the hearts of your pupils for your nobleness of character, as well as for your wisdom. The life of the world's greatest musician, Bach, was as unblemished as his music.

DIVIDE the day into so many equal parts, and as you faithfully perform the duty pertaining to each, see to it that discrimination and tact are qualities pervading them.

EVER be on the alert to absorb wisdom and new ideas from other people, for the teacher who is sufficient unto himself is not the progressive instructor, but a "backslider" in the religion of music.

FIRST be the man before you are the artist. Forgive any real or fancied wrong from another musician, and as soon as possible return good for evil. Your observance of the Golden Rule will bring many blessings.

GUARD the weak part in the chain of your character. Make each link so strong and beautiful that it will be capable of bearing not only yourself but many others who may cling to you for the support of the good and the true. "Vincit, qui se vincit."

HOLD fast to your high musical ideals; perform and listen to the best music and reveal its beauties *as a language* to your pupils, so that they may grow to enjoy it intellectually as well as emotionally.

IN endeavoring to secure a laurel wreath by some glorious achievement, be not forgetful of the "might of little things," else the angel of fame will slip by you before you have even heard the flutter of her wings.

JUDGE not harshly another musician's position, work, or progress in the world, for unless you dwell within his home and can draw back the curtain which veils his life and heart, you cannot judge wisely or fairly. Our profession needs more teachers to speak well (or not at all) of other teachers.

KEEP as your friends some choice books upon your desk, books in whose greatness you can trace your weakness; books whose power will inspire your own; books which will fill your mind and heart with renewed courage, and books which will create in you a longing to grow nobler and wiser each day, no matter how small your place in the world may seem.

LEARN the value of words; learn to speak the word of praise instead of the word of censure; learn to be decisive; learn to say "No" as well as "Yes"; you will then be saved much useless expenditure of time and strength.

MANAGE to spare an hour of the early morning to your own musical improvement, and reserve thirty minutes at noon for repose or out-of-door exercise, and devote a little time each evening listening to beautiful music or to those friends whose influence will strengthen you for the work of the morrow.

NOTE well the passing of the mile-stones, and see to it that you have kept pace with them by forging ahead by your *own* efforts and not by shoving aside another.

OVERCOME those obstacles which are but necessary rounds in the ladder of success, for the experience gained in conquering them will be your greatest and wisest teacher.

PRESERVE your dignity as well as your authority over your pupils, for the mantle of reserve will be a protection and not a barrier, and will longer preserve the effectiveness of your teaching and influence.

QUIETLY study out the cause for any failure to see if the fault be yours. Then guard against its recurrence. Quietly contemplate your successes and strive to cultivate the same conditions which led towards them.

RECEIVE gratefully the criticisms of your work which are offered in a friendly spirit, and earnestly seek to profit by them.

STRIVE to cultivate cheerfulness and be sure to keep your woes to yourself. Your social attractiveness has an important bearing upon your musical standing.

THOUGHTFUL teachers are the most helpful — those who are considerate of their pupils' limitations; those who perform kind acts and who speak words of encouragement at the right moment, and all those who prize their own power because it is a beautiful medium through which they can best inspire those confided to their care.

UNLESS you wish to be considered a "bore," do not talk about your accomplishments and successes. If they are of merit, people will learn of them from others.

VERILY, verily, I say, that he who follows these precepts will find the measure of his reward "pressed down, heaped up, and running over."

WORK to concentrate your mind upon the vital, and not the unimportant, details of living and teaching. What you may do upon some momentous occasion will depend upon your present worth, and what that worth is will be the result of your *daily* training and endeavor.

"You must either soar or stoop,
Fall or triumph, stand or droop;
You must either serve or govern,
Must be slave or must be sovereign;
Must, in fine, be lock or wedge,
Must be anvil or be sledge."

THE MENACE OF MECHANICAL MUSIC

(Continued)

JOHN PHILIP SOUSA*

The host of mechanical reproducing machines, in their mad desire to supply music for all occasions, are offering to supplant the illustrator in the classroom, the dance orchestra, the home and public singers and players, and so on. Evidently they believe no field too large for their incursions, no claim too extravagant. But the further they can justify these claims, the more noxious the whole system becomes.

Just so far as a spirit of emulation once inspired proud parent or aspiring daughter to send for the music teacher when the neighbor child across the way began to take lessons, the emulation is turning to the purchase of a rival piano player in each house, and the hope of developing the local musical personality is eliminated.

The country dance orchestra of violin, guitar, and melodeon had to rest at times, and the resultant interruption afforded the opportunity for general sociability and rest among the entire company. Now a tireless mechanism can keep everlastingly at it, and much of what made the dance a wholesome recreation is eliminated.

The country band, with its energetic renditions, its loyal support by local merchants, its benefit concerts, band wagon, gay uniforms, State tournaments, and the attendant pride and gaiety, is apparently doomed to vanish in the general assault on personality in music.

* Reprinted by special permission of D. Appleton Company, from Appleton's Magazine.

There was a time when the pine woods of the north were sacred to summer simplicity, when around the camp fire at night the stories were told and the songs were sung with a charm all their own. But even now the invasion of the North has begun, and the ingenious purveyor of canned music is urging the sportsman, on his way to the silent places with gun and rod, tent and canoe, to take with him some disks, cranks, and cogs to sing to him as he sits by the firelight, a thought as unhappy and incongruous as canned salmon by a trout brook.

In the prospective scheme of mechanical music, we shall see man and maiden in a light canoe under the summer moon upon an Adirondack lake with a gramophone caroling love songs from amidships. The Spanish cavalier must abandon his guitar and serenade his beloved with a phonograph under his arm.

Shall we not expect that when the nation once more sounds its call to arms and the gallant regiment marches forth, there will be no majestic drum major, no serried ranks of sonorous trombones, no glittering array of brass, no rolling of drums? In their stead will be a huge phonograph, mounted on a 100 H. P. automobile, grinding out *The Girl I left behind Me*, *Dixie*, and *The Stars and Stripes Forever*.

How the soldiers' bosoms will swell at the thought that they are being led into the strife by a machine! And when in camp at night, they are gathered about the cheery fire, it will not be: —

Give us a song, the soldier cried.

It will not be: —

They sang of love, and not of fame,
Forgot was Britain's glory;
Each heart recalled a different name,
But all sang *Annie Laurie*.

But it will be: —

Whir — whir — whir — Song by the Bungtown Quartet: *Your Name is Dennis*.

Shades of Alexander, of Washington, of Napoleon, of Wellington, of Grant, and of the other immortal heroes! Never again will the soldier hear the defiant call of the bugle to battle, and the historic lines must be changed to: —

"Gentlemen of the French guards, turn on your phonographs first."

And the future d'Auteroches will reply: —

"Sir, we never turn on our phonographs first; please to turn yours first."

It is at the fireside that we look for virtue and patriotism, for songs that stir the blood and fire the zeal; for songs of home, of mother, and of love, that touch the heart and brighten the eye. Music teaches all that is beautiful in this world. Let us not hamper it with a machine that tells the story day by day, without variation, without soul, barren of the joy, the passion, the ardor that is the inheritance of man alone.

And now a word on a detail of personal interest which has a right to be heard because it voices a claim for fair play, far-reaching in its effects beyond the personal profit of one or many individuals. I venture to say that it will come as an entire surprise to almost every reader to learn that the composers of the music now produced so widely by the mechanical players of every sort draw no profit from it whatever. Composers are entirely unprotected by the copyright laws of the United States as at present written on the statute books and interpreted by the courts. The composer of the most popular waltz or march of the year must see it seized, reproduced at will on wax cylinder, brass disk, or strip of perforated paper, multiplied indefinitely, and sold at large profit all over the country, without a penny of remuneration to himself for the use of this original product of his brain.

It is this fact that is the immediate occasion of the present article, for the whole subject has become acute by reason of certain proposed legislation in Congress at Washington. The two phases of the subject — fair play to music and fair play to musicians — are so naturally connected that I have not hesitated to cover the legal and the artistic sides of the question in a single discussion.

A new copyright bill was introduced in Congress at the

last session, a joint committee met on June 6, to hear arguments on the bill as presented, and the following paragraph was cause for lively discussion on the part of the various talking-machine interests and composers represented: —

Paragraph (G) of Section I, which provides "that the copyright secured by this Act shall include the sole and exclusive right to make, sell, distribute, or let for hire any device, contrivance, or appliance especially adapted in any manner whatsoever to reproduce to the ear the whole or any material part of any work published and copyrighted after this Act shall have gone into effect, or by means of any such device or appliance publicly to reproduce to the ear the whole or any material part of such work."

I was among those present, and became particularly keen on the efforts of opposing interests to impress upon the committee by specious argument and fallacious interpretation that the composer of music had no rights under the Constitution that they were bound to respect; and that remedial legislation was wholly out of the question until the Constitution had first been amended.

One gentleman went the length of declaring that he would never have worked out his reproducing apparatus had he not felt confident that the Constitution gave him the right to appropriate the brightest efforts of the American composer, and he voiced the belief that any act giving the composer ownership in his own property would be most unconstitutional.

Asked if he claimed the right to take one of my compositions and use it in connection with his mechanical device without compensation to myself, his unselfish reply was: "Under the Constitution and all the laws of the land, I say Yes, decidedly!"

Asked if he was not protected in his patents, his answer was promptly in the affirmative, but he seemed wholly unable to grasp the proposition that a composer should ask for similar protection on his creative work.

Asked finally if he desired the Constitution amended, he replied magnanimously: "No, sir, I want the Constitution to stand as it is."

Of course it must not be overlooked that in the United States Circuit Court of Appeals a case has just been decided adversely to the composer's rights in the profits accruing from the use of his compositions on the talking and playing machines, but this case awaits final adjudication, on appeal, in the United States Supreme Court. Judges Lacombe, Coxe, and Townsend rendered a decision as follows: —

We are of the opinion that a perforated paper roll, such as is manufactured by defendant, is not a copy of complainant's staff notation, for the following reasons: —

"It is not a copy in fact; it is not designed to be read or actually used in reading music as the original staff notation is; and the claim that it may be read, which is practically disproved by the great preponderance of evidence, even if true, would establish merely a theory or possibility of use, as distinguished from an actual use. The argument that because the roll is a notation or record of the music, it is, therefore, a copy, would apply to the disk of the phonograph or the barrel of the organ, which, it must be admitted, are not copies of the sheet music. The perforations in the rolls are not a varied form of symbols substituted for the symbols used by the author. They are mere adjuncts of a valve mechanism in a machine. In fact, the machine, or musical playing device, is the thing which appropriates the author's property and publishes it by producing the musical sounds, thus conveying the author's composition to the public."

May I ask, Does this machine appropriate the author's composition without human assistance? Is the machine a free agent? Does it go about to seek whom it may devour? And if, as quoted above, the machine "publishes it," is not the owner of the machine responsible for its acts?

Is a copyright simply represented by a sheet of music? Is there no more to it than the silent notation? The little black spots on the five lines and spaces, the measured bars, are merely the record of birth and existence of a musical thought. These marks are something beyond the mere shape, the color, the length of the pages. They are only one form of recording the coming into the world of a newly fashioned work, which, by the right of authorship, inherent and constitutional, belongs to him who conceived it. They are no more the living theme which they record than the description of a beautiful woman is the woman herself.

Should the day come that the courts will give me the absolute power of controlling my compositions, which I feel is now mine under the Constitution, then I am not so sure that my name will appear as often as at present in the catalogs of the talking and playing machines.

Evidently Judge Abinger, of the English bar, believes in the doctrine of substance, for he says: —

"The most unlettered in music can distinguish one song from another; and the mere adaptation of the air, either by changing it to a dance, or by transferring it from one instrument to another, does not, even to common apprehension, alter the original subject. The ear tells you that it is the same. The original air requires the aid of genius for its construction; but a mere mechanic in music can make the adaptation or accompaniment. Substantially the piracy is where the appropriated music, though adapted to a different purpose from that of the original, may still be recognized by the ear."

Again the English court says: —

"The composition of a new air or melody is entitled to protection; and the appropriation of the whole, or of any substantial part of it, without the license of the author, is a piracy, and the adaptation of it, either by changing it to a dance, or by transferring it from one instrument to another, if the ear detects the same air, in the same arrangement, will not relieve it from the penalty."

The section of the Constitution on which my whole legal contention is based provides: —

"The Congress shall have power to secure for limited time to authors and inventors the exclusive right to their respective writings and discoveries."

And my claim is, that the words "exclusive" and "writings," particularly the latter, are so broad in their meaning that they cover every point raised by existing copyright laws, even to the unauthorized use of musical compositions by mechanical reproducing apparatuses, and all this because these two words deal, not alone with the letter, but with the spirit as well.

But let the ambiguities in the text of law be what they may; let there be of legal quips and quirks as many as you please, for the life of me, I am puzzled to know why the powerful corporations controlling these playing and talking machines are so totally blind to the moral and ethical questions involved. Could anything be more blamable, as a matter of principle, than to take an artist's composition, reproduce it a thousandfold on their machines, and deny him all participation in the large financial returns, by hiding back of the diaphanous pretense that in the guise of a disk or roll his composition is not his property?

Do they not realize that if the accredited composers, who have come into vogue by reason of merit and labor, are refused a just reward for their efforts, a condition is almost sure to arise where all incentive to further creative work is lacking, and compositions will no longer flow from their pens; or where they will be compelled to refrain from publishing their compositions at all, and control them in manuscript? What, then, of the playing and talking machines?

BECOMING A TEACHER

EMILY FRANCES BAUER

It would be difficult to say when the right moment is at hand to cease being the pupil to enter the broader school of becoming a teacher, and I use the word pupil instead of student because one should never cease being a student. Indeed, the young teacher learns quite as much from her pupil as the pupil does from the teacher; if not, she is not capable of assuming the great responsibility which rests upon any teacher, particularly upon a teacher of music.

It is well for a young teacher to begin her career while she is yet studying herself with a superior master, because it gives her the opportunity, not only to talk over her work with her own teacher, but here and there her eyes are opened to weaknesses in her own work. It must be well understood that no one is so well able to make broad strides in any field, whether as teacher or as public performer, until after she has passed through the experience of teaching others, especially if it be foundation work. The reason for this is obvious, since a large majority of pupils who have succeeded in becoming fairly proficient in a certain sense are lacking in the foundation, and not until they themselves have built this foundation under their own work by teaching others are they freed from the thraldom for which they have never been able to account.

If "poets are born, not made," so are teachers, because in addition to the acquired knowledge which they in turn pass on to others, they must be possessed of certain characteristics, without which the very attempt to teach is folly. First among these qualifications is seriousness of purpose, which should be supplemented with the highest aims. It might be well to state bluntly what is meant by this remark. In a word, then, if the teaching of music is resorted to simply because it is one way of making a living, it is too bad for the teacher and a hundred times worse for the pupil, and notwithstanding the outward bearing, it is not possible to bring results unless the teacher is impressed with the nobility of her profession as well as the responsibility which has been laid upon her as complementary to her talents.

The trouble with too many teachers is that they regard their occupation as work which they would rather not do, were it a matter of choice, when it is a fact that the calling of teacher is one of the most important in life. We should regard the teacher as he was regarded in the olden days, when he was honored by kings and emperors and held as a blessing to mankind and to the world at large. The teacher has not fallen from his high estate, as far as his importance is concerned, but we have grown careless and we have lost sight of the breadth of his influence. In this there is no harm, but that the teacher should underrate his own mission in life is where the danger to his work lies.

The question is often raised whether men or women are the better teachers, and it is not easy to answer this without modifications. The mother instinct in every woman makes her better able to understand child life, and to bring herself to the level of the child mind in order to raise this mind and to broaden it. On the other hand, a woman's mind is less analytical than man's, and on this side perhaps the man would have the advantage, unless woman, knowing this and understanding it, would prepare herself to meet this exigency. It must be remembered at the present time that analysis is in the ascendency, indeed, to such an extent, that in the long run the emotional side is likely to suffer; but to the analytical minds, especially of the American people, do we owe the great amount of mentality which pervades all branches of study and art to-day. The intellectual growth in the study of music is not alone sensed in the interpretative

side, but in the technical as well; and whether in one method or in another, the habits are not based on mechanism alone, but the mechanism is based upon mind. The old-fashioned way of learning by rote or by repetition is giving way every day, and the more one thinks of this the more one marvels that there ever could have been results from the parrot-like repetition formerly in vogue.

The young woman who is ready to enter a professional life should spend a few years in teaching, even though she may aim to be a concert pianist, or even if she is to follow vocal music, although it is not well for a person who expects to be a public singer to wear the bloom off the voice in teaching. This understood, there is nothing that would accomplish more for the foundation of a singer than to teach for a few years, because from whatever cause it may be, few singers build upon the foundation which classifies them among musicians, and teaching would be more likely to supply this than anything else except the sort of study which they ought to have and which they usually do not have.

One who is beginning a professional career, whether as teacher, pianist, or singer, should lose no opportunity to gain experience, whether their services are paid for or not. It is a bad plan in a certain way to get into the habit of doing things for nothing; at the same time, until one gains poise and experience and what is known as stage presence, the débutante's services are worth little, and she gains more from the opportunity to appear in public than the public gains from hearing her. The same is true of the teacher, and it is well worth the while of young teachers to interest themselves in a few talented children, whether they can pay for their lessons or not, because the teachers are gaining that which is beyond price and which is an absolute necessity for their own advancement.

One thing which is of vital importance at this moment is the study of the teacher herself. This should be kept up systematically and broadly, which means that the studies are not completed when this or that musical work is done. To be successful in any musical circle as much depends upon the cultivation of the mind as upon the development of the art, and one cannot be too careful about the general reading, since it is reading which creates the atmosphere, both artistically and intellectually.

Perhaps it is true that more dangers beset those who enter the world of singers than those who become teachers, even pianists. It may be that the reason for this is because there is more glamour around the singer's life than around that of teacher or pianist, and for that reason the attention is swerved from the highest aims, and especially from the course of study, into channels which bear upon social connections and upon frivolities in general.

In former articles I have spoken of the danger of attention to public opinion and catering to this opinion. Perhaps it is well to refer to it again, because it is in the early day of a singer's life that she builds for the future, and that building must be done, not upon public opinion and social connections, but upon the seriousness of the art itself. All young women in every run of life, in fact, are open to the dangers of flattery, but none to the extent of the singer, who is the target for everybody's flattery and compliments. Well for her if she have sufficient sense to understand that this has no relation to her art but simply to the fact that she is a woman and it seems to be human nature to offer women flattery in some form or another.

It might appear to the casual observer that this phase is outside the province of a writer upon musical conditions, but under the present circumstances it is not, since it is one of the most subtle dangers that besets the young woman entering a professional life. All exaggerations are dangerous, whether on one side or on the other. By this I mean that everybody cannot be in grand opera, and many good singers are lost to the public and to themselves because they see nothing but the glamour of the operatic stage. On the other hand, it is better to aim too high than too low, because even though one falls below a certain point aimed at, she will probably have reached greater heights than she would have had her aims been less exalted in the first place.

Take the question from whatever side you will, we get back to the matter of study, particularly in the early period of a career, when the engagements are not so overwhelming as to take up all the time and strength of the aspirant for vocal honors. It should not be lost sight of that the study of languages has become absolutely necessary to the singer or she must adhere to the decision never to sing a song in a foreign language. It is not sufficient that she understand the language perfectly nor even that she pronounce it perfectly, but that it is a means of expression with which she is perfectly easy and unaware of any degree of exertion. It is as necessary for a language to be in this condition as it is for tone production to be entirely off the mind of the singer, because not without this freedom is a singer able to express herself in a manner which would stamp her as an artist among those who know art.

Another thing to be remembered is that those who do not understand the art feel the lack of the fine points just as much as do the connoisseurs, but they do not know what is the cause. Indeed, it is very often the case that a true musician is more charitable in judgment than are those who are not musical students, because the laymen may believe that a failing is more serious than it is or he may attribute to the singer certain things that lie in the acoustics or elsewhere; for this reason there should be no time when a singer may depend upon inferior work or slipshod methods, because it not only builds poor reputation for the future, but also it establishes bad habits, and no one is such a creature of habit as is the musician.

To sum up the situation, the day of study never ceases, and it is not exaggeration to state that the early part of a musician's career must be given over to more serious study, if anything, than during the student life. Young aspirants must not forget, however, that there is even more responsibility during these early days than there may be in the future, because if they teach they always have the foundation work of young pupils, and it is certain that this is the most important period of study, which should be treated as a sacred charge and not in the spirit referred to in the beginning of this article, as an easy way of making a living.

ALL APPLAUSE IS NOT GENUINE

Everybody who knows anything about the theatre knows that every actor can act best when he acts to an enthusiastic audience. But few people know of the ingenious methods by which ordinarily placid audiences are worked up into enthusiastic assemblages.

The claque as it exists abroad has no existence in this country. On the other side of the water it is a regular institution. An author, a manager, or a star buys its services for a certain amount of money, and the claquers, some of them in evening dress and occupying the best seats in the house, and some of them in shabbier clothing and in the gallery burst into fierce applause at the giving of a signal.

Cases are upon record of head claquers suing theatrical men for money alleged to be due them for the services that have been rendered by their assistants.

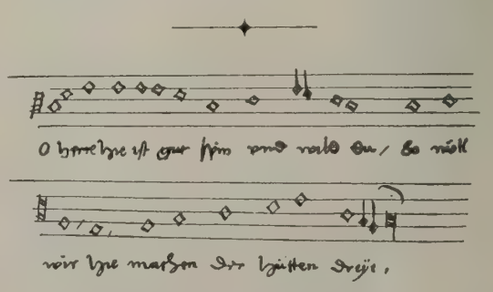
In this country, while few persons are paid in money to applaud a show, the ushers in many theatres are understood to be under the direction of the house management or the business management of the show for applauding purposes, especially on first nights. Many theatregoers have noticed the unemotional ushers breaking into wild applause, and perhaps have decided that the situation or the lines that have wrung from theatre attachés this testimonial have unusual power in themselves. Quite likely some one in authority has directed the businesslike applause.

"Shaking the curtain pole" is another means of creating an ovation of which little is known. Suppose the curtain to have descended upon the end of an act. A large part of the audience applauds. It wants the actor to come before the curtain to acknowledge the curtain call. He does not come. Others in the audience join in the demonstration. You may be sure that any member of the star's business staff that is in the front of the house is keeping his hands busy now. But still the star does not show himself or herself.

There are symptoms after a few moments that the applause is dying down.

This is where the fine Italian hand of the stage manager reaches out from the stage and manages the audience. There is visible a certain agitation of the curtain. It proceeds from that end of the curtain from which the actor usually steps to take the curtain call. The agitation continues. The curtain pole is shaken and the curtain itself is held back from the side of the proscenium arch. The audience, thinking that the actor is getting ready to step out, redoubles its applause. The ovation having by this time reached genuine heights the player permits himself to come before the curtain and the trick has been accomplished.

Actors of course have many personal friends who think it a point of duty to lavish applause upon them while they are upon the stage. Actors themselves make the best audience in the world to play to. They usually are generous with their approval, although "deadheads" who are not "professionals" usually are cold and clammy. On the occasion of a production of a musical comedy in Chicago not long ago the friend of one of the members of the company was applauding on behalf of his friend. Turning to the man next to him, who was not applauding, he said: "Give So and So a hand." The other man looked at him and answered: "I'd like to do it, but I can't. I'm here for What's His Name," mentioning another member of the company.



THE HANDWRITING OF HANS SACHS

BOOKS AND REVIEWS

GOOD BOOKS

THALEON BLAKE

In any scheme of reading, books relating to one's profession should not be too much in evidence. Why? Because the mind is given to let truths enter it without much labor — truths which have association with things of which it has had previous knowledge, while things new or unknown, views of life not formally entertained, the mind absorbs slowly. Breadth is gained only by study of books which open new vistas to the mental vision. Therefore, in any list of books which a young man or woman is about to read, let a few be books *professional*, while all others treat of *outside topics*.

The list which I have in mind is not complete, being ridiculously far from exhaustive of the most interesting departments of literature; but where personal taste is a matter of so much vigor and decision, it can only hope to serve as a specimen to be altered, amended, curtailed, or lengthened at will. First, then, on the list, I would place *professional* reading; second, *books of amusement* — novels, short fiction, nature studies, etc.; third, the *writers to youth;* fourth, the *philosophers and poets.*

If I were making out a list for myself, I should begin, and very likely end, with these last dignitaries of literature; but as there was a period when I could not be made to find good between their covers, I presume many youthful minds are in the same dilemma. This is not to be wondered at or lamented over, since youth hankers after *action* first, and all the while. A word, not of apology, but of explanation, is due to my readers, why I place Plutarch on a list intended mostly for art students, none of whom could possibly be "Plutarch's Men." The lessons of heroic character, marvelous perseverance, patience, industry, courage, faith, with which that work abounds, are of incalculable benefit to young people on the threshold of life; there is, besides, Plutarch himself, to be met, known, and loved — between the lines; the gentle Plutarch, humble seeker of truth, the charming, straightforward man of letters.

THE LIST

I

Professional reading: —

(*a*) Class magazines, papers, etc.
(*b*) Technical.
(*c*) Biography of the profession's great men and women.

II

Amusement reading: —

(*a*) Fiction.
(*b*) General magazines, papers, etc.

III

Culture reading (for youths): —

(*a*) Entering on Life. (Dr. Geikie.)
(*b*) Lectures to Young Men. (H. W. Beecher.)
(*c*) Plutarch's Lives.
(*d*) Representative Men. (R. W. Emerson.)
(*e*) Heroes. (Thomas Carlyle.)
(*f*) Essays — All Emerson's — or if part, { Compensation / Experience }
(*g*) Essays of Elia — all, or if part, { Old Benches / Old China / Dream Children } (Charles Lamb).
(*h*) Nature and Culture. (H. W. Mabie.)
(*i*) Autobiography — Benjamin Franklin.

IV

Poets and philosophers: —

(*a*) Ulysses. (Lord Tennyson.)
(*b*) { L'Allegro / Il Penseroso / Lycidas } (John Milton.)
(*c*) A play; or the Sonnets. (William Shakespeare.)
(*d*) Intimations of Immortality. (William Wordsworth.)
(*e*) Snowbound. (J. G. Whittier.)
(*f*) { Something of Spencer. }
(*g*) { Something of Plato. }

All reading is cultural, yet I have ventured to place the poets and philosophers in a separate section. There is an unfortunate prejudice among the "ignorant masses of the educated," against all poetry, all philosophy. Again, I hesitate to specify *what* philosophers — fully; as it depends altogether upon the mental bias of each individual, whether philosophy should be read before, say, Lamb, or Hawthorne, or Amiel, or Andersen, or De Quincey, or Coleridge, and others who are preeminently the favorites of cultured people.

We cannot be Ruskins, all of us, but the magical charm of literary masters, may, by toil, be fully ours, if we seek the haunting cadences and their kingly thoughts.

REVIEWS

WEDDING SUITE. Op. 20. Giuseppe Ferrata. New York, J. Fischer & Bro.

This suite is in four numbers. No. 1, *Cortège Nuptial*, for violin and organ, is an effective march in which the solo violin appears in excellent contrast to the "king of instruments." This movement is extended and the themes are interesting and well developed. No. 2, *The Wedding Vow*, for organ solo, is brief but tuneful, and is written mainly for manuals; with here and there a pedal note. No. 3, *A Song of Thanksgiving*. is for solo soprano, with piano accompaniment, the text by James Thompson. This movement is extended and elaborate, with many rhythms and key changes. Both singer and accompanist should be above the average as to technical attainments. No. 4, *Wedding March* for organ, is in more or less of the conventional type, but is brilliant and can be made very effective by one of good technical skill. The whole is attractively published and will be found useful in wedding functions where a ceremonial is employed.

REVERIE and REVERIE TRISTE. For organ. Giuseppe Ferrata. New York, J. Fischer & Bro.

The first of these is No. 3 of the composer's Op. 9. It demands considerable technical ability on the part of the performer, but is melodic and well written, the registration being carefully indicated. The second, No. 4 of the same opus, is along similar lines, but shorter than the preceding. Organists will find both of these available, either for the ordinary church service or recital use, as may be desired.

1. Enchantment. Charles Wakefield Cadman.
2. Mistress Mary. Jessie L. Gaynor.
3. I Love the Old Doll Best. Jessie L. Gaynor and Frederic F. Beale.
4. April is Here. Charles E. Wheeler.
5. The Land of Nod. Elsie G. Phelan.
6. Abide with Me. Mabel H. McDuffee.

Chicago, Clayton F. Summy Co.

No. 1 is a pleasing song of the conventional type, that can be used by alto or baritone, on many occasions, with success. Nos. 2 and 3 are for children, and while well adapted for the purpose, are not of the trivial sort as are many compositions of their class. The latter of these is from the operetta *The Toy Shop*. No. 4 is for medium voice, and the solo portion is not difficult. The accompaniment requires a flexible right hand, and a good legato. No. 5, also for medium voice, is comparatively easy; both will be found acceptable by the average vocalist. No. 6 is for church use, being a somewhat conventional setting of Rev. H. F. Lyte's familiar text. It is not difficult and the accompaniment is available either for piano or organ. The voice part is also in comfortable compass.

MUSICAL TERMS DEFINED

Accelerando. — This means speed up. When you see this mark, walk very fast and blow your horn as loud as you can.

Pro bono publico. — In other words, quit practicing about an hour before midnight if you would avoid having bricks violently propelled through the windows.

Volti subito. — Turn over quickly. This is equally suitable as applied to a page of music, a sum of money, or a nap in a hammock.

Tenuto. — This indicates that a clarinet pawned for $10 cannot be redeemed for $9.75.

Adagio. — When you see this sign play like an Italian.

Legato. — Means smooth or slippery. When this mark occurs, drop your own instrument and grab a trombone from the nearest performer to you. You can then play the music just as the composer intended it to sound. In case the trombone player objects to surrendering his instrument, fell him to the earth with an ordinary 85-cent music stand.

E pluribus unum. — Broadly translated, this means, that out of many jobs the union should get the majority of them.

Sic transit glorii mundi. — This means that on Monday the musician who has played at a park all the preceding day, feels rather punk and disinclined to labor at his regular vocation. — *Musical Enterprise.*

THE OLD-WORLD CITIES

There is one mood, there is one picture, in which, as it seems to me, better than in all the rest is the physiognomy of Rome to be ideally contemplated. That is when twilight falls, and, from beneath the trees on the terrace of the Villa Medici, one looks across the sea of palace roofs, and the ancient militant grandeur of the city is softened by an indescribable peace.

We hear much of "sunny" Spain. Granada on a day in June explains and justifies the phrase, but the streets of Madrid are never more characteristic, even in the summer time, than when the cutting wind comes down from the mountains and makes the sunny day seem bleak.

Holland is radiant when the tulips are in bloom, but to feel in your blood the influence of all that Holland signifies you must explore its cities, and especially its smaller towns, under leaden skies, or stand on one of its beaches with the rain and wind whipping across your face, and watch the fishermen shouldering their boats through the angry surf.

One might go on indefinitely recalling cycles of atmospheric effects in this or that country, successions of episodes, all beautiful, but one of them invariably possessing the subtle spiritual quality in which the genius of the place is summed up.

The genius of place, we are assured, is threatened by the encroachments of modern progress. I wonder why it should be so. Old dwellers in Italy bemoan the losses that follow change, and in a measure they are right. The Piazza di San Marco can never be the same without its old Campanile. The architects may be never so faithful to the lines of the original tower in the construction of the new one, and still there will be a melancholy difference, which every traveler who has long known and loved his Venice will be bound to feel.

The puffing steamboats on the Grand Canal scarcely atone by their usefulness for the incongruity of their presence in waters which the gondola or the sailing boat with its stained canvas is as indispensable to the picture conceived by the poetical imagination as are the marble palace walls. — *Scribner's.*

SOME BIRMINGHAM FESTIVAL NOVELTIES

EDMONDSTOUNE DUNCAN

Birmingham can boast a fairly proud record in her festivals. She produced Mendelssohn's *Saint Paul*, the *Lob-Gesang* and *Elijah*, Sterndale-Bennett's *Woman of Samaria*, Gounod's *Redemption* and *Mors et Vita*, Dvorak's *Requiem*, Elgar's *Dream*, and many triumphant masterpieces by Costa, Benedict, Sullivan, now rather obscure. If the masters have suffered from the lapse of time, the small men have been literally effaced. To the historian then let us leave such considerations; the critic's duty lies nearer home.

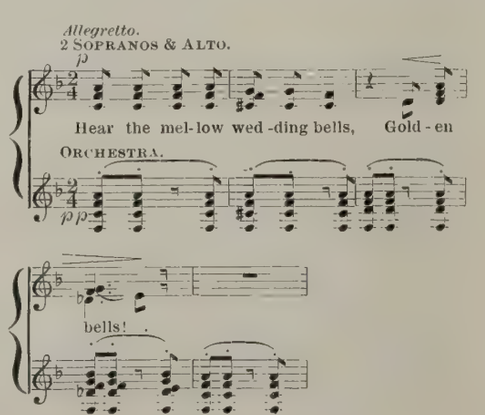
Early in October the English music-loving public will be invited to test Joseph Holbrooke's setting of Edgar Allan Poe's *Bells*, and Granville Bantock's version of Fitzgerald's English translation of the *Rubáiyát of Omar Khayyám*. The works are as yet unperformed, so let it be premised that the remarks here offered are based merely on a careful reading of the vocal scores which Breitkopf & Haertel have sent for review.

No two works could be more strongly contrasted; for, whereas Poe's poem carries its own music, its own rhythm, and melody, the old twelfth-century piece has neither music, melody, or rhythm of its own, beyond the clever reflex which the English translation preserves of the Persian original. In tackling two such subjects the pluck of our composers is undeniable. Holbrooke comes with a good orchestral record. His variations on *Three Blind Mice* and *The Girl I left behind Me*, no less than the *Queen Mab* tone poem have won him an excellent reputation. His management of the orchestra is both masterly and distinguished, and he possesses a real vein of poetic invention which (upon occasions) he indulges. Well able to write fine themes, he nevertheless commonly contents himself with vaporous atmosphere. He does not necessarily copy either Wagner, Berlioz, or Strauss; but he employs devices which are indissolubly associated with such masters. He thus cares little if the color scheme suggests *Tristan* or *Tod und Verklärung;* he is aiming at great canvases and the selection of pigments is none too nice. One observes that in the present instance the choral voice is one group only in an organic scheme, and is never indulged any more than the brass or wood-wind. Such phrases as fall to their lot would have no meaning, taken alone. They are merely relative. One wonders if it would not be kinder to leave them out.

Granville Bantock's work is invariably interesting, and if we do not now write him down a great master, he at least has time on his side, and there is small fear that he will fail to set his seal on the fortunes of the day. His Eastern leanings have been previously shown in such works as the *Fire-Worshippers* and a number of songs. Like Mr. Holbrooke, he is essentially a modern orchestral writer, and (unlike him) his vocal writing is distinctly lenient. There is nothing to choose between the two men in occasional passages: both take a wide freedom; but one feels instinctively that the balance of conservatism (the key-stone of Art though so little respected at the present moment) lies in Mr. Bantock's favor. Why he should choose the curiously cynical *Omar* for his text is at least a mystery. Miss Liza Lehmann had previously illustrated its futility. What does the text contain that a musician can reasonably exploit? There is certainly an easeful, indulgent kind of melody in Fitzgerald's English verse, possibly even a psychological moment or two worth treatment; but there is nothing tense or dramatic, and very little of the qualities which would naturally be demanded by a composer employing *Soli* voices, chorus, and large orchestra. To say that neither of the poems under consideration constituted a good musical libretto might be going too far. Certainly neither composer asks or needs ordinary conditions; and, believing (as I do) that *anything* can be set to good music — Palestrina or Schubert proved it — we may look closely into the scores before us without fear of disappointment.

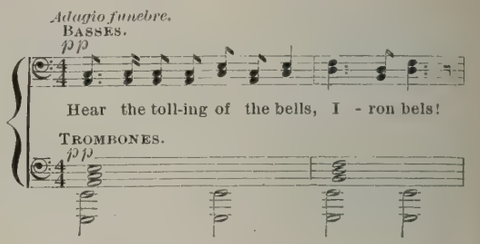
Poe's *Bells* appears self-contained when delivered by a well-modulated, sonorous, sympathetic reading voice; but Mr. Holbrooke thought otherwise; and he offers, through the medium of chorus and orchestra, a fine, dashing, highly colored presentment which has about as much in common with the original delicate conceit as subsists between a great glittering canvas and a tiny water-color sketch. The prelude, practically a full-sized rhapsody for orchestra, is wrought (as one might anticipate) of the same material as the choral fabric afterwards offered. It is a foreshadowing of the mood or moods which the several verse stanzas call into being. Beginning with light, aerial phrases (a few bars of which I quote) the music at once touches an imaginative vein which includes a statement of the leading themes afterwards employed.

Passing lightly by this admirable prelude (which recalls the Wagner plan) the first chorus with its merry tinkling sleigh bells enters on the chord of A minor with the theme just quoted. The choral voice sounds fresh and clear and has the contrast afforded by the prelude ending with the choral of G♯ major. The little bells sound the speeding sleigh most charmingly, a feature of delicacy being the expressive Horn-phrases which accompany their constant tintinnabulation. Then the orchestra prepares the way for the third movement, which is devoted to wedding bells, and, beginning with great simplicity, gradually works to a climax *fff*, where all the bells of the church-steeple may be supposed to peal forth their most joyous music.

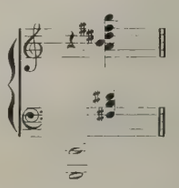


Alarm bells introduce themselves in a spirited eight-part chorus. They ring sharp upon the ear, as if some sudden peril called a sleeping city to arms. Here the composer seems to run to extremes. Bells do some curious things. Quasimodo knew some of their possibilities; but, really, do they do anything at all like Mr. Holbrooke's *Bells* They are not even sweet bells jangled. He jangles, jars, and violently swings them until one is heartily glad that his graphic portrayal of alarm gives away to calmer ecstasies, at the words "How the danger sinks and swells," which becomes immediately poetic and significant, in quiet contrast to the noise which preceded it.

Lastly come the iron-tongued bells.



Mr. Holbrooke brings his realistic tone-poem to a strong end. But one feels almost surprised that he did not end with such a chord as this



taken from another part of his work.

Certainly there is plenty of scope for a first-class chorus and orchestra, without which no one need attempt so ambitious an effort. But given the resources, a good conductor will delight his audience.

It was eminently fitting that Granville Bantock's setting of *Omar Khayyám* should appear at the Birmingham Festival, for the composer, since his appointment as principal of the Midland Institute of Music, has become one of the vital art-forces of the town. What Perry and Mackenzie do for London Bantock is doing for Birmingham. But he is a younger man, and his sympathies are with the New Movement — such as it is. Like Mr. Holbrooke, he rejects the ancient forms, and, armed with the weapons of Berlioz and Strauss, comes to conquer new worlds. The Midland Capital will easily capitulate.

The nature of the Persian poem does not allow of any well-marked or highly developed movements. Indeed, the whole of Part I is simply a long philosophical discourse, prefaced by a short instrumental opening and carried forward by a chorus and three "persons of the drama" introduced into the poem for necessary variety. The *persons* are "The Beloved" (contralto), the "Poet" (tenor), and the "Philosopher" (baritone). In the musical setting, the regular versification of Fitzgerald disappears, and in its place we get a richly illuminated text, full of strangely varying life and color. "Wake!" says the first word of the poem, and the chorus takes it up with a zest and energy which would have roused the most lethargic Eastern to greet the Sun and pay his Matins. Every poetic detail is transformed into reality by virtue of Mr. Bantock's wand. We feel the night being *driven* from the welkin, and can readily start as the shaft of light *strikes* the Sultan's turret. Not less real is the voice within the Tavern calling the loitering "Mirror of Virtue" (or "Rose of Delight") to devotions announced by cock-crow. Parenthetically I may assure my readers that there is no note in Mr. Bantock's score appropriate to the Bird of Dawn. The choral utterance "Open then the door" comes with bustle and excitement, maintained by the simple device of repeating the words some scores of times, until the listener, if he be reasonable, must be convinced that the Temple-door (or Tavern-door, for the Poet leaves the reader to guess which door was meant) *must* be wide open. The "Poet" now takes up the story and sings of the New Year and

old yearnings, leading one through many sweet paths of thought, exquisitely reproduced in the music. A fragment of a drinking-song, terse and discreet, is interjected by the chorus in "Come fill the cup," which leads to an imaginative passage describing the Bird of Time: —

"The Bird of Time has but a little way
To flutter and the Bird is on the wing."

We can hear him flutter as he goes, and the air seems full of the rhythmical pulsations of his winged flight. A bold and original chorus to the words "what have we to do with Kaikobad the Great" (written largely in consecutive fifths) will scarcely distress the conservative harmonist, since there is no disguise or concealment in the matter. Mr. Bantock wanted cold contemptuous sound, and he got it the nearest way. Some of the most beautiful music in all the work is associated with the following expressive stanza: —

"A Book of Verses underneath the Bough,
A jug of Wine, a loaf of Bread — and thou
Beside me singing in the Wilderness,—
Oh, Wilderness were Paradise enow."

The music divides itself between the "Beloved" and the "Poet," and the resulting duet becomes almost a tangible *number*, prolonged by the risky expedient of many repetitions of the words. One small but significant quotation of the music at this point must suffice for want of

It is unnecessary to follow our composer through all the details of his score. Enough has been said to give a general idea of his methods. I have still to refer to his large use of local coloring. The very first notes are formed upon Muezzin's *Call to Prayer*, and at p. 198 a *Turkomani* melody (sung with closed lips on the syllable "Mn.") is interpolated apparently to give a glimpse of camp life on the Desert. Such things justify themselves by their success. Certainly they should help towards a more vivid picture of the East and her ways. For the work as a whole I do not hesitate to prophesy a large measure of success. Those who desire more detailed information of Mr. Bantock's work may be recommended to obtain Mr. Ernest Newman's *Analytical and Descriptive Notes*, which will be published in October.

A DISTINCTIVE PROGRAM

The following program was given recently by Florian Shepard, at Asbury Park, N. J.: —

Invention	*Bach*
Venetian Boat Song	*Mendelssohn*
Fingertwist	*Emery*
Rondo Capriccioso	*Mendelssohn*
Good Night	*Nevin*
Gavotte	*Dupont*
Caprice	*Stavenhagen*
Skylark	*Tschaikowski*
Grasshopper's Song	*Emery*
Curious Story	*Heller*
Ghosts	*Schytte*
Vielliebchen	*Lange*
Serenata	*Moszkowski*

MACDOWELL'S LIFE AS AN INCENTIVE TO ARTISTIC COOPERATION

W. FRANCIS GATES

There has been organized recently in New York a society which is to a certain extent a recognition of the high ideals and notable artistic achievements of the foremost American composer, Edward MacDowell. The aim, announced in the prospectus of "The MacDowell Club of New York City," is beautifully stated in these words: "To fulfil the life purpose of Edward MacDowell," with a further expression, "to emphasize the nobility of art as a whole, and the fundamental unity of the several arts; and to broaden their application and influence; to study and demonstrate the correlation of the drama, literature, and music, architecture, painting, and sculpture and the other fine arts; to aid in the extension of knowledge of the esthetic principles, and to bring into prominence special works of art that are deserving of recognition."

E. A. MACDOWELL

This is a broad program, but one eminently to be commended, and one that would have the warm sympathy of that sweet-souled artist for whom the club is named. The practical efforts of the club, the active members of which "shall be persons well equipped in some one of the arts, and able and willing to participate in the artistic activities of the club," will be put forth in public and private exhibitions at which works especially fitted to exemplify the finer purposes of the club will be presented. The directors will determine the works of music, literature, painting, sculpture, and the allied arts thus to be brought to the attention of the club and the public.

So notable is the list of names found on the board of managers and the advisory board that one cannot omit mention of the more prominent. Among them are Hamlin Garland, Lawrence Gilman, Seth Low, William Apthorp, Sara Bernhardt, H. T. Finck, Daniel C. French, R. W. Gilder, H. L. Higginson, W. D. Howells, James Huneker, John LaFarge, Frederick MacMonnies, Richard Mansfield, William Mason, Horatio Parker, Emil Pauer, Wassily Safonoff, Augustus St. Gaudens, Frederick Stock, Owen Wister, and John Burroughs.

Such a list of active supporters any enterprise might well be proud of, representing, as it does, all forms of artistic activity. It is to be hoped that this organization will act as a sort of parent club, which will foster the formation of others in different parts of the country, all working toward the same end, that of aiding in the extension of esthetic principles, demonstrating the correlation of literature, music, and the plastic arts, and bringing before the public such works of art as might otherwise be slow of general recognition.

While the club is named after a musician, it is remarked that its scope is wide enough to include all the arts, thus giving it a breadth that will better illustrate "the life purpose of Edward MacDowell," and many another artist.

A LETTER TO A YOUNG MUSICIAN

W. D. ARMSTRONG

Technique

In order to get at the root of this subject, we find that Noah Webster defines the adjective *Technique*, as "the method of performance in any act, execution."

It embraces two important and essential elements, touch and figuration.

Touch

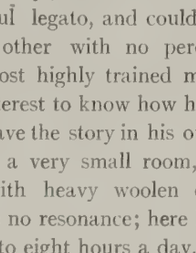
It has been suggested to you how to seat yourself at the piano. The next thing is to get the hands from your lap on to the keys. This is called the primary motion. When the hands leave the lap, the procedure should be as graceful as possible. As the wrist rises, let the hand fall in toward the body; and while moving toward the keyboard, let it be extended, until, rising upon the keys, the fingers fall, curved, on their tips. The difficulty is to make this, the first start, easily and artistically. Of two performers, one without much finger ability but with a fine style, the other with an immense amount of technique but no finish, your good judgment, I am sure, would prefer the former.

Having acquired this first motion, the second consists in raising the hand, wrist, and forearm simultaneously; this will occur at the beginning of each phrase, slur, and, usually, after a rest. These are fundamental, mechanical performances, but are of the greatest importance, as you will more fully realize.

Interest in a musical interpretation depends upon tone variety and the individuality of the performer. Leaving the last consideration aside, we find that there are two different styles of touch, *legato* and *staccato:* connected and detached tones. A work containing several pages of staccato would require an artist of much ability to

make pleasing; the same may be said of legato. However, the effect is most beautiful when used in contrast, as in Beethoven's Scherzo from the *Moonlight Sonata* or the Andante from the G major Sonata, Op. 14. Legato and staccato are possible on nearly every musical instrument, including the human voice, which is the most perfect and wonderful of all.

Eduard Remenyi, the celebrated violinist, had a most beautiful legato, and could pass from one string to the other with no perceptible break, even to the most highly trained musical ear. It might be of interest to know how he accomplished this, and we have the story in his own words. He would go into a very small room, and have the walls hung with heavy woolen cloths, so that there would be no resonance; here he would practice from four to eight hours a day. Now, do not let this discourage you, because you realize that nothing can be accomplished in music, except by hard work, both mental and physical.



ANTON RUBINSTEIN AT THE AGE OF 13

Anton Rubinstein conceived the idea that if he could get from a key to a contiguous one in perfect legato, he could get from that one to any other by means of the fingers or the sustaining pedal. He set about the task, and none of his contemporaries had a more singing tone than he.

The ear having been accustomed to discern what is a good tone, you will then begin to train the fingers in musical figuration.

Figuration

This includes the scales, arpeggios, octaves, and chords, in their many and diverse forms. This study continues so long as you expect to be a performer. In a certain city live two brothers, each about sixty years of age; both excellent pianists. One of them was asked if the other still kept up his music. "Oh, yes," he replied, "he practices his scales every day." When you have the work well in hand you can play almost anything, and it is the only logical method to pursue. One may benefit by beginning at once to play pieces, but it is best, first, to master the fingers, and have them ready for any emergency.

Another matter which comes under this head is the correct use of the pedals, more particularly the sustaining pedal. This branch of piano playing requires much attention and serious thought. With the right teaching material, the pedal can be used almost at the beginning of instruction. Later on you will study harmony, counterpoint, and musical form, which will enable you to understand more clearly the construction of music.

EYE FOCUS IN PIANO PLAYING

FRANCIS H. MORTON

Among the many problems which piano teachers are from time to time called upon to solve the subject of this article is surely not least. Much time is wasted, and progress retarded, by the erratic and unmethodical use of sight in piano playing.

The following experience drew my attention in this direction. For some little time past I have noticed a quiet, far-away look about an advanced pupil while playing. There was a notable absence of that hurried, anxious glare which most students bestow on the music page during the lesson. However, mistakes were few and far between, in spite of the reduced optical intensity and movements of the eyes. Moreover, the performance was quite refreshing in the contrast it presented to the — alas — undecided and nervous style usually in evidence. So, after the lesson one day, I placed a piece of music on the desk and took the piano chair, and without any definite object, perhaps, sat there and gazed at the music, while wondering what had happened to improve so much the playing I had just heard. Was it improved practice? Or friend's commendations — or awakened ambition — or perhaps a new response to that inner Voice of Music? I did not know. And so the music page was presently forgotten, though I still gazed at it, but with unseeing eyes.

Suddenly I became conscious of what my eyes were really doing, and in the same instant realized that a student had unconsciously stumbled on a discovery which would greatly modify existing views on the treatment of *sight in piano playing*, if, indeed, it has ever been given the attention it merits.

And this is what I became aware of. In my state of abstraction the eyes had gradually extended their focus past and beyond the music, until, in surprise, I found that the whole of it was dimly revealed to me. Sight seemed, as it were, to embrace the whole in a glance, looking toward and through the centre of the leaf. As I brought my eyes gradually back to their normal focus, some curious sensations were evolved. The music grew correspondingly plainer, but in an exact ratio the field of sight diminished, and the greater part of the page passed into the *margin of sight*, where, of course, it became as hazy and indistinct as the whole of it was with distant focus. In this case, a fresh movement of the eyes is necessary for every chord, and often for single notes.

Without doubt, in prolonged practice, short focus becomes very tiring and painful to the eyes, causing "nervous" headache, and even short-sightedness.

Trying the new method, I found only one movement per measure was necessary when sight was focused through the middle of the measure on an imaginary spot about six inches behind the music.

When the range was increased to three feet or thereabouts, the whole line presented itself, and at two hundred yards' focus the whole page was seen. (It must be understood that the distances are merely approximate, and are only given that the reader may experiment himself.) Of course, the details were not observed, but the essential outline of the music was clearly perceptible. Before any success will attend this method, it is absolutely necessary that ordinary focus be used first in practice till the details are mastered. Afterwards, by degrees, the "far sight" gives excellent results.

Referring to the sensations while thus reading an old piece, one experiences a splendid feeling of steadiness. I could see what had been played, what was being played, what was to come, and what lay far ahead. Thus I was, as it were, a sentry, and could from my place perceive the page at a glance. The music seemed to broaden out; one seemed surrounded with tone, and the novel sensation left no room for nervousness — the trouble of most pianists.

It may be thought this is claiming too much; but at least it will be admitted that what may give relief to eyes already tired, perhaps, steadiness to unsteadiness, and repose or relaxation to tension is worth trying. Assume it to be true, and then prove it by actual trial. Even if one is not wholly successful, does it condemn others to failure?

In playing technical exercises, where no music is needed, focus the eyes through a point six inches above the keys on an imaginary star in the depths of space. This somewhat fantastic idea is simply to help one to grasp the fact that the eyes must keep the lines of sight as divergent (parallel) as possible. The fingers will continue their accustomed motions, and the mind may now be concentrated better than ever before on music alone. Has the thought occurred to us *how dependent attention is on vision?* That which I see is that towards which I direct my attention. But we cannot see tone, and it is difficult to keep the attention fixed on that which has no objective reality, when so many material forms — the instrument, keys, music, pages, lights, listeners, etc., — catch the glance and solicit attention.

Now it is patent that when the eyes are fixed and steady, not being *focused* on anything objectively real, the mind will in sympathy also be freed, at least partially, from objective concentration; we seem to look through that which would fain arrest our observation. The mind, being thus freed, will lead to an unusual liberation of soul — spirit — call it what you will; and then shall the tone of even technical exercises, if played in the right way, and the Voice whose echo the great composers heard and made manifest in their works, assume a life and quality of conviction both new and wonderful.

Yet a certain control must be maintained or a state of abstraction will certainly supervene, induced by the sympathetic sensation of sight which in abstraction or reverie is always distantly focused, as in the manner under consideration. This reverie or abstraction is fatal to the first necessity in practice — Industry — and my warning will here be pardoned, because, before one knows it, the insidious virus of *laziness* may be endangering the life and progress of the Practice Hour.

So, although the eyes are not scanning the music page as closely as of yore, the ear must be on the alert to discover the least discrepancy of tone, interpretative or executive, and a super-active mind pass judgment on every phrase. The music should be tolerably familiar to sight and fingers, and not too difficult in respect to technique.

These conditions being complied with, there is no reason to doubt a successful issue to a fair trial of this new method of using eye focus in piano playing.

MUSIC AND THE ALLIANCE FRANÇAISE

JULIEN TIERSOT

The Alliance Française is a society which pursues the propagation of the French language and literature in the different countries of the world with its headquarters in Paris. Outside of France its work is done by local branches which to-day are scattered all over the world. These branches enjoy complete autonomy; they are perfectly free to apply the fundamental principles of the society to the local customs of their country. The usual means of bringing the society into notice, among the most advanced nations, known to be on friendly terms with France, consists in arranging meetings where the French language is obligatory, or by performing French comedies and dramas, or finally, by sending to France for lecturers who will speak before the foreign audience on subjects pertaining to their history, their literature, or their national arts.

It is perhaps unnecessary to say that America, the great sister republic, as the French like to call her, is, by reason of its influence, as well as its widely known generosity, the best territory for the Alliance Française. Branches of this association have been established in nearly all the cities of America, and these have been united under the name of the Federation of the Alliance Française in the United States and Canada.

Music, the universal language, should, as a matter of course, be given a place in this organization. There is no doubt that much benefit and pleasure are derived from the practical use of a foreign language or from lectures given by competent speakers, but in the long run weariness may gain the upper hand. At such moments music is the most natural diverter. It is restful and refreshing. As the universal language, it is welcome to all because it is understood by all. Thus, musical performances have often been resorted to as a means of recreation in the meetings of the Alliance Française, and French artists and music teachers have, on many occasions, given concerts within the association. But it would seem to be advisable to limit the programs of these concerts to French compositions for the sake of obtaining a better knowledge and command of French art.

Theatrical performances also attract the public, and those who wish to familiarize themselves with French will derive much benefit by hearing the language spoken in a comedy, the mere sight of which is captivating. The association has already established real French theatres in several cities. So in Chicago where the Théâtre de l'Alliance Française has become an institution which gives a varied number of plays during the season, and thus maintains a close relation between the public of the great central city of the United States and the French dramatic movement. Then there is New York, where, under the direction of E. Perrin, an excellent comedian of the Paris theatres, young, intelligent amateurs have interpreted a number of the latest works this year.

A classic repertory is preferred by the French circles of universities and colleges. There, more than anywhere else, the managers saw the need of music for their theatrical performances, and they introduced it in the most interesting way: Molière's comedies were provided with interludes, Racine's tragedies with choruses, similar to the ancient choruses of Euripides and Sophocles; in order to reconstruct Molière's and Racine's works, the musical parts, used in former times, but nowadays omitted in nearly all the French theatres, were added to the spoken parts. Thus the members of the French circle of Harvard University have performed for the last twenty years plays belonging to this repertory. During this last season they performed in Cambridge and in Boston *L'Amour médecin* by Molière, with the interludes, the songs, and the dances, composed by Lulli, which may not have been heard since the time of Louis XIV. A year ago they played *Les Folies amoureuses* by Regnard, with the original prologue and epilogue; *le Mariage de la Folie*, a real old-fashioned opera-ballet act. Like Lulli's compositions, the music of Gilliers, a French composer who to-day is nearly forgotten, had, in view of this American performance, been reconstructed according to the only known score owned by the library of the Paris Conservatory. Furthermore, *Esther*, one of Racine's tragedies, was performed in a small college for young women, in Albany, on Feb. 22, 1906, exactly as in 1689 at Saint-Cyr, before the king and Madame de Maintenon; that is to say, with the music by Moreau, a composer who deserved more recognition than he ever received after his death, and who was eulogized by the author of the poem in the following terms: "His songs have made the piece most attractive. . . . Songs as touching as these and as suitable to the words have not been heard for some time." If the author of this article has, in a measure, contributed to the success of these dramas by the suggestions which he had a chance to make in regard to the musical parts, and by the attention he gave to their transcription, he was only too glad to do so. Indeed, he thinks that although the performance of this much neglected music may have been somewhat imperfect, nothing could have given the American public a more exact idea of the ancient French dramatic and lyric art than those integral performances of works composed of the original constitutive elements of this art: music and poetry.

It was my good fortune to participate in some of the manifestations of the Franco-American music life during this last season. I was invited by the Federation of the Alliance Française to be one of the official lecturers this year, and I have spent five months on American soil. Nearly all former lecturers had treated literary, social, and historical questions. The domain of art had also furnished subjects to André Michel, a trustee of the Louvre Museum, and his lectures had dealt with French history, painting, sculpture, and architecture. This year music was taken up, and it was one of the librarians of the Paris Conservatory, the author of this article, who had the honor of lecturing to various audiences of the Alliance Française.

Thus I traveled through the United States and Canada, from the banks of the St. Lawrence River to the Gulf of Mexico, and from the Atlantic Ocean to the western extremity of the Great Lakes. I did not visit the West, although I had received an invitation to go there. If I had done so, I should have been in San Francisco at the very time of the earthquake. There is a God for the lecturers! I have given sixty lectures in more than thirty cities and universities, such as New York, Boston, Portland, Hartford, New Haven, Albany, Rochester, Montreal, Quebec, Buffalo, Cleveland, Pittsburgh, Cincinnati, Indianapolis, Chicago, Milwaukee, Philadelphia, Baltimore, Washington, New Orleans; Wellesley College, Oberlin College, Haverford, Vassar College, Wells College, Columbia University, etc. In Washington I had the honor of speaking on the French popular song at the White House before President and Mrs. Roosevelt.

The subjects of these music lectures, most of which I illustrated by playing some of the works in question, were as follows: —

The Popular Song in France.
The Historic and National Songs of France.
The Christmas Carols.
Lyric Poetry and Music in France from the Twelfth to the Eighteenth Century.
The Origin of the French Opera (from Lulli to Rameau).
The French Comic Opera.
Hector Berlioz.

The first of these subjects (The Popular Song) has been received most favorably. In sixty lectures I delivered it more than thirty times.

I should be very glad if this propaganda made in favor of the former and modern French art would be more than a passing recollection, and if my work had left the impression that this art rests on a solid basis in the past, that it has a powerful vitality in the present, and that it is worthy of being placed side by side with those of the other great European nations, Germany and Italy. The validity of this assertion may scarcely be admitted in a country where so many efforts are made in favor of Germany and Italy. Thus while I was in New York I could not but appreciate the high art standard of the Metropolitan Opera House, on many occasions, yet, on the one hand, I never heard any but Wagner's music dramas from *Tannhäuser* to the *Nibelungen* and *Parsifal*, together with the delightful *Hansel and Gretel* by Humperdinck, for a change, then, on the other hand, along with the modern operas by Puccini and Leoncavallo: *Lucia di Lammermoor*, *Il Trovatore*, *Il Barbiere di Siviglia* up to the *Elisire d'Amore*, none but productions of a superannuated repertory which nowadays is scorned on this side of the ocean. If *Faust* and *Carmen* had not, once in a while, put in a timid appearance, one might have judged by the programs of this year that French music was not in existence.

Even at the French Opera House in New Orleans, where the ancient traditions, due to the French origin of the city, have always been prevalent, the Italian operas, *Amica* by Mascagni and *Siberia* by Giordano, were the only novelties of this year, and they did not meet with any success.

Such conditions are provoking and grave enough to be considered by the numerous friends that France and her leading minds have made in America.

The most effective and the most natural work in the cause of French music has already been done by French artists who practiced their art with great success in this country. Thus I witnessed real triumphs won all over America by our great singer, Emma Calvé, who is an enthusiastic and intelligent interpreter of both the popular song and the best works of our art. There is also our great pianist, Raoul Pugno, who has been heard in all the great cities of the United States as an interpreter of our old masters — Rameau, Couperin, — as well as the latest, César Franck, Vincent d'Indy, Claude Debussy, and Gabriel Fauré. One of those just mentioned, Vincent d'Indy, came to this country in order to direct concerts in Boston and several other eastern cities, the programs of which were composed of none but works of the modern French school; besides his own richly colored symphonies and poems he brought out Gabriel Fauré's delicate music in *Pelléas et Mélisande*, Paul Dukas' humoristic *Apprenti sorcier*, Debussy's highly sonorous *Nocturnes*, also a symphony by Ernest Chausson, a funeral march by Albéric Magnard, etc. The American public is as yet but little familiar with this new music, and it may not have been able to penetrate the secret of that advanced art at once; nevertheless, we hope that Mr. d'Indy's visit has not been any the less beneficial, for it has initiated the American public into new sensations which will be appreciated all the better in the future.

Even in other spheres I have met French artists who worked for the good of their national art in different ways. Thus Mr. Gilibert, the excellent singer, who has been most successful in interpreting the best works of the popular art and modern songs. Mr. Giraudet is another one; his magnificent voice was much admired at the Paris Opera House, only a short time ago. Now he intends to use his rare talents as a singing teacher.

I was also glad to see that the number of orchestral players representing the French school is increasing. The first time that I attended a concert of the Boston Symphony Orchestra I entered the hall at the moment when the orchestra was beginning to play Mozart's Symphony in G minor. I felt as if I were transported to Paris, to the Conservatory or the Lamoureux or the Colonne concerts, so much did the music, especially the melody of the wind instruments, resemble the music of our French orchestra. I soon found out the reason. It was because all the musicians who played those instruments were Frenchmen, and it did not take me long to recognize them personally. They were Mr. Longy, the first oboist, and beside him Mr. Lenom; the two brothers Maquarre, the flutists; Mr. Grisez, first clarinet player, etc. In the New York orchestra, which is conducted by

PIANO TEACHERS and MUSICIANS : :

You expect from your pupils the best work in return for competent and careful training. Nothing short of competency and carefulness will secure the best work.

As with pupils, so with pianos. Nothing short of competency and carefulness in construction will give the best results.

The best results in piano construction are only possible when the best piano actions are used.

Every piano containing a

STRAUCH BROS. PIANO ACTION

produces the best results.

Strauch actions are carefully made by competent workmen and of the best materials. Every member of the firm is an expert in piano tone, touch, regulation, construction, and finish. Strauch Actions are only found in high-grade pianos.

Insist on having a Strauch Action and see that you get it. (The name is stamped on the rail.)

30 Tenth Ave. **STRAUCH BROS.** New York

Cantatas and Operettas

BEFORE making up your list of Musical Works for use the coming season, be sure and send for our Descriptive Circular "P", which includes a list of SACRED CHORAL WORKS and SECULAR CHORAL WORKS, OPERETTAS and SCENIC CANTATAS, OPERETTAS and CANTATAS FOR SPECIAL SEASONS, and a list of all works for which we can furnish orchestral accompaniments on rental.

This book of 52 pages will be sent free on request.

We call attention to another page in this number for a complete list of our catalogs. We recommend that you send for these as needed, and keep them for reference. You will find them invaluable.

If you will send us your name, and let us know the kind of music in which you are interested; the size of your class and the number of your pupils, etc., we will keep you posted as to our new publications.

Correspondence Course in Voice-placing
By CARL YOUNG
63 Auditorium Building
CHICAGO, ILL.

Walter Damrosch, I saw Mr. Barrère (the excellent flutist, recently first soloist of the Colonne concerts and flutist at the Opera House), Leroy, the clarinet player, Mesnard, the bassoonist, Tabuteau, the young oboe player, one of the recent graduates of the Paris Conservatory, etc. The violinist, Emile Sauret, who is teaching at the Conservatory in Chicago, is considered to be the most prominent musician in that city; he, too, is a Frenchman.

It is not merely by their talent as musicians that these artists do credit to their native country; they are all anxious to give their personal aid toward a better knowledge of French music in America. The Boston musicians have formed a society of wind instrument players, the Longy Club, named after its president Mr. Longy, the oboe player, and have organized it the same as a club formed by Mr. Taffanel in Paris.

Exchanging the instrument, of which he is master, for the baton, Mr. Longy directed the concerts of the Boston Orchestral Club, under the auspices of Mrs. Richard J. Hall. He plans to have none but French music in his programs. Last season he brought out the highly colored *Rhapsodie Cambodgienne* by Bourgault-Ducoudray, the *Pêcheurs de Saint Jean,* a recent novelty by Widor, the sparkling *España* by Chabrier, the preludes of *L'Ouragan* by Bruneau, the *Danses populaires françaises* by Julien Tiersot, and compositions by Guiraud, Fauré, Massenet, Vidal, etc. It looks very much as if the French musicians of New York were soon going to follow this excellent example. Mr. Barrère is inclined to start the movement and be its leader.

Thus I met French musicians of all kinds and abilities in America, all well disposed to uphold the banner of their national art. They certainly deserve the gratitude of those who remained on the other side of the ocean, and their best wishes for success which, as I know from personal experience, has already made itself manifest in a conspicuous monner. As the lecturer of the Alliance Française I was one of the musicians in America this year, and I took pleasure in congratulating them upon their success and in sharing their satisfaction in person.

SCHOOL CHILDREN AT THE WORCESTER FESTIVAL

MARY L. REGAL

(In the *Springfield Republican*)

The afternoon rehearsal of October 2 was devoted to orchestral numbers under Mr. Kneisel's conducting, the second half, to an important and interesting feature, namely, the singing of a chorus of 350 school children, members of the high schools, led by Charles I. Rice, the supervisor of music in the public schools. The character and size of the audience clearly indicated the fact that there was a widespread interest in the performance of the youthful chorus. Many children were to be seen, some of them in company with their grandparents, all listening and looking with eager attention.

The singers were a charming sight with their fresh young faces. They seemed to enjoy the novelty of their position and before their turn came displayed an interest in some of the novel orchestral instruments to which they found themselves neighbors. The numbers sung included *Olaf Trygvason* by Grieg, *Barbara Frietchie* by Jules Jordan, and the familiar Welsh air, *All through the Night.* These works were chosen probably because of the interest which they would excite in the children, a very important point.

The chorus showed a commendable attention to the conductor, and for an inexperienced body of singers, unaccustomed to hearing an orchestral accompaniment, heeded their cues pretty well. The quality of the tone produced was unusually good. Of course in a collection of singers of high school age the girls' voices are always of better quality — and will predominate. The sopranos were by far the most conspicuous.

The importance of a feature like this lies not so much in the fact that the pupils of the high schools have prepared a few works for public performance with orchestra at the festival, as in the far-reaching, indirect results of this fact, such as making the schools feeders of the festival chorus, the fostering of a more general interest in the festival, and in aiding our nation to become really musical.

The place to begin is certainly with the young people if we are ever to become cultivated in music. In a generation or two from now, it ought not to be possible, as it now is, for so many educated, cultivated persons of middle life to confess cheerfully, even proudly, to an entire ignorance of the whole art of music.

Into the home of every one of these 350 singers some knowledge of the festival and of some of the music given will penetrate.

The financial result should be an advantage to the festival. For two years now, the practice has obtained of allowing the pupils of the high schools and ninth grades to attend certain rehearsals at half price and has apparently justified itself. Probably the amount of money received is not materially different from what it would be if every one paid full prices, but the larger audience is a gain.

The thanks of the community are due to Mr. Rice for his earnest and devoted efforts to spread the knowledge and love of music everywhere. Before the numbers were sung he announced that he would be assisted by three of his pupils, one at the organ, one in the solo of *Olaf Trygvason* and one, a present choir boy, in the solo part of *Barbara Frietchie.* They all acquitted themselves with due credit. They were Walter Brown and Harold Armitage in the vocal solos and G. Arthur Colburn at the organ.

THE WORCESTER FESTIVAL OF 1906

H. J. STORER

The forty-ninth annual festival of the Worcester County (Mass.) Musical Association was given in that city, Oct. 3–5, in five concerts. Besides these, there were a number of public rehearsals earlier in the week as well as those held on the mornings during the festival period itself.

This year the chorus numbered about four hundred voices. The orchestra of sixty members was made up from the Boston Symphony organization, and the performances were under the direction of Franz Kneisel and Wallace Goodrich. A. W. Snow was the organist, and Arthur J. Bassett the pianist.

At the opening concert Wednesday evening, Oct. 3, Handel's *Israel in Egypt* was presented by the full chorus, with Margaret C. Rabold and Viola Campbell Waterhouse sopranos, Grace Minson, contralto, Paul Dufault, tenor, Frederick Martin and Tom Daniel, basses as the soloists. None of these had been heard at previous festivals excepting Mr. Martin. If memory serves, *Israel in Egypt* has not been given in Worcester for over ten years. It is only second to *The Messiah* in popular esteem, and with the "cuts" made in the score on this occasion, the performance had many enjoyable moments. But the writer is inclined to the belief that most of the Handelian oratorio product, written to suit the musical appreciation of the middle of the eighteenth century, would be seldom, if ever, given if Handel's magic name, created largely by *The Messiah,* was not affixed to the score. There are some inspiring choruses in *Israel in Egypt,* but as a whole it has outlived its day and fashion.

The chorus was not at its best, for things were hardly in "running order," so the performance was perfunctory. The soloists apparently were "not in the spirit," for their work was frequently uninspiring. There was excuse for this, for the solo numbers of the oratorio are ungrateful, — a fact which I think will not be disputed except by the Handelian enthusiast. The audience, by the way, was unresponsive at this performance.

On Thursday afternoon there was a larger audience and more genuine enthusiasm. The program included Goldmark's *In the Spring* overture, aria from Bizet's unfamiliar *Pearl Fishers,* Symphonic variations by Frederick A. Stock, conductor of the Thomas Chicago orchestra, Saint-Saëns' Third Concerto for violin in B minor, and Schumann's Fourth Symphony in D minor. Mrs. Rabold, soprano, and Timothee Adamowski, violinist, were the soloists. Mr. Kneisel conducted.

Undoubtedly the musical feature of this concert was Mr. Stock's symphonic variations upon an original theme played at this festival for the first time. I do not remember

SPECIAL NOTICE TO PIANO TEACHERS

THE SHEPARD SYSTEM provides an Element often lacking in Music Study,—the development of WILL, DETERMINATION, PERSONAL FORCE,—the most potent factor of success. Adapted, and may be added to any method; learned in a few lessons. This POWER TO INSPIRE THE BEST IN EVERY PUPIL is distinct from Musicianship, and a REVELATION TO ALL WHO STUDY IT. Taught personally or by mail. Summer course at Asbury Park, N. J. Booklet.

A TEACHERS' NORMAL PIANO CLASS, covering these principles. First lesson and free Demonstration Recital, Saturday, Nov. 10th.

A HARMONY LECTURE CLASS. Practical, Simplified Harmony, Ear Training, and Analysis, for Pianists, Singers, and Teachers. First lecture free, Nov. 10th. Circulars.

HARMONY BY MAIL. Simple, Practical, Rapid. Specimen Lesson. HARMONY SIMPLIFIED, 10th Ed. On Approval.

SHEPARD SCHOOLS OF MUSIC, 828-829 Carnegie Hall, New York

a previous performance of it either in or about Boston. The work is pleasing; although too long, it is well made and ingeniously scored. In this latter respect one will notice reminiscent pages of Tschaikowsky and some other moderns that could be named.

Mr. Stock is apparently finely equipped in the technique of his art, and while he has not written in this instance a work that will remain in memory for any length of time, it proved to possess much interest. The orchestra played it admirably. Altogether there was a great amount of work to be done in little time, and it was surprising that the results were as good, so far as the orchestra is concerned. It proves what the members of the Boston Symphony organization are capable of doing if the necessity requires.

But to return to the concert of Thursday afternoon. Mrs. Rabold sang with acceptance, for her voice is very pleasing and Mr. Adamowski, who has not appeared here as soloist since his youthful days, gave a refined, graceful performance of the Saint-Saëns Concerto. Yet it was not Mr. Adamowski as he was a few years ago.

The Thursday evening concert was in many ways the best of any of them. A choral program was presented, which included Brahms' *Song of Destiny* for chorus, and Verdi's *Requiem* with these soloists: Louise Ormsby, soprano, Isabel Bouton, contralto, Daniel Beddoe, tenor, and Frederick Martin, bass. Mr. Goodrich directed both numbers.

The Brahms work is short and highly impressive, but the audience apparently failed to appreciate it, although the performance was admirable. The chorus did its best work, however, in the Verdi *Requiem*, and the writer remembers few, if any performances, more satisfactory. The work is one of the most impressive of any of its kind. It is Verdi at his best, and in some ways his conception of the sublime text is unique in all music. What can be more impressive than the *Lacrimosa?*

Mr. Goodrich increased his reputation as a conductor by the results he achieved in the *Requiem*.

Of the soloists Mr. Beddoe, although suffering from indisposition, was easily the first as to artistic results. To use a popular phrase, he is "a find" in all respects. He made a great impression — as well he might — for his voice is singularly beautiful as to tonal quality; he sings with freedom, and has that vocal artistry that satisfies at every point. He will make a great name for himself in a short time, for he is one of the few tenors off the operatic stage who can create the feeling that one wants to hear him again and that speedily.

Mr. Martin has improved greatly during the past year or two, and his singing was one of the features of the evening. Miss Ormsby has a pleasing voice, but she is a lyric soprano and in strong dramatic occasions she will manifestly be overweighted. She made an excellent attempt, but here her limitations were often in evidence. In her proper sphere, however, she will be most acceptable. Madame Bouton gave great acceptance, and generally she was fully adequate to the demands.

The concerts of Friday, the closing day, were more of the "popular" order, especially that given in the evening.

In the afternoon the feature was the performance of Rubinstein's Piano Concerto, No. 4, by Olga Samaroff. This lady has achieved phenomenal success the past year, and she deserves it, for she is one of the few pianists of her sex that interest whenever she is heard. While she played the Rubinstein Concerto with some immaturity of conception, especially in certain of the more poetic portions of the work, the general performance was distinguished for superb virtuosity and energy, fine tone, as well as a logical and consistent artistic picture of the work itself. She received an immense ovation. For an encore she played a Nocturne, Op. 9, No. 2, by Scriabine for the left hand alone, an extremely clever work which is at present little known.

Mrs. Naylor, whom many will remember as Grace Preston of a few years ago, sang the well-known aria *O Mio Fernando* from *La Favorita*, most acceptably.

Schubert's masterpiece, the C major Symphony, was the opening number. It is manifestly out of place at a festival, owing to its length, and the orchestra was much fatigued; therefore the performance was indifferent. Some shorter piece should have been selected, more pleasing to the audience, and easier to play. Two excerpts from MacDowell's *Song of Roland* were also given.

The evening concert was the *élite* and popular occasion. The soloists were numerous, and "extras" many. The chorus was present and there was a capacity audience.

Messrs. Goodrich and Kneisel conducted and Max Zach was the pianist. Mr. Beddoe sang the *Cielo e mar* from Ponchielli's *La Gioconda*. Mme. Louise Homer sang the *O Pretres de Baal* from Meyerbeer's *Prophète*. Bessie Bell Collier played Saint-Saëns' Introduction and Rondo Capriccioso for violin. Mr. Daniel sang *Honor and Arms* from Handel's *Samson*. Mademoiselle Parkina gave the "mad scene" from Donizetti's *Lucia*, and Emilio de Gogorza was heard in the familiar prologue from Leoncavallo's *Pagliacci*. The chorus sang a Bach chorus from the *Christmas Oratorio*, and the orchestra played Weber's *Euryanthe* overture, Grieg's *Peer Gynt* suite, Elgar's *Chanson de Matin* also Wagner's *Rienzi* overture.

One need comment little on the final concert, except to say that the singers were in good voice and every number was enthusiastically applauded. Miss Parkina, a newcomer, made a fine impression, so did Miss Collier, who also appeared for the first time. Orchestra and chorus were admirable in every way.

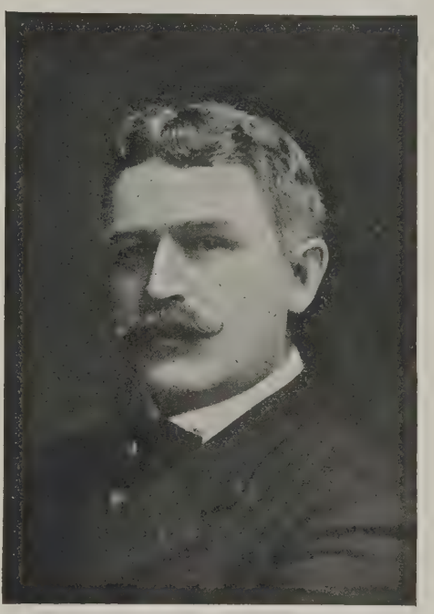
The results of the festival financially were stated to be more satisfactory than for some years. This is most gratifying. Certainly the artistic results were highly to be commended. These festivals do much good in creating a love for the best in music, only there is manifestly too much crowded into a short space of time. This perhaps cannot be avoided. It was wise to hold the festival a week later than usual. Messrs. Paul B. Morgan, Charles I. Rice, Arthur J. Bassett, J. Vernon Butler, and all the others who labored faithfully in the good cause are to be warmly congratulated for the success that attended their efforts. May the golden jubilee of the Association next year be an epoch-making event, not only for Worcester but for American music throughout the country.

INTERVIEW WITH MR. CARL SOBESKI

Mr. Carl Sobeski was recently interviewed at his studio in the Huntington Chambers, Boston, and he naturally felt greatly pleased and encouraged over the results of his course of study the past summer in New York with the distinguished baritone, Emilo de Gogorza.

In truth, Mr. Sobeski's experience was in a way unique, for he had the good fortune of being the only one that has yet received instruction from Mr. de Gogorza as to the latter's exquisite art. We all know that he made the only actual success of any singer that appeared in Boston the past season, and there were many who, after hearing him in recital, said, "How does he do it?" and, "Why can't other artists sing as interestingly?" Well, it is largely one's own self in addition to natural vocal gifts that make the singer. Mr. de Gogorza does not give instruction as is generally understood, but he did impart to Mr. Sobeski certain things that the latter found of the utmost importance, and which he will be able to apply in his own teaching.

Mr. Sobeski has certain principles of vocal art that he adheres to constantly, but as to any conventional "cut-and-dried method," he has none. For no two pupils are alike; each has his or her own individuality which must be studied and developed. All teachers with "method" should be avoided. Mr. Sobeski truly says: "The same medicine acts differently with different constitutions. Study individuality; be familiar with the physical condition of the pupil, and build according to his needs.



CARL SOBESKI

Teach concentration. But few teachers, especially great ones, will teach science and philosophy, because their inference is that the pupil already knows it. The true teacher is that one who imbues his pupils with the real spirit for artistic work, which comes only with the power to concentrate. The *breath* is the thing! *Mezzo voce* may be used until broader, more beautiful, more resonant tones are attained; then the pupil is ready to express. Direct the well-supported tone into the masque, and relax the organs of production. Use lips easily, for pure enunciation is not labored. Then the rule, if rule you must have, is simply *concentration, relaxation*, and breath control with diaphragmatic support. I have no method, but I do adhere to principles."

The Institute of Musical Art commenced its regular session on October 15.

Very few changes have been made in the faculty — the most notable being the engagement of Mr. Adrian Freni, a friend of Anton Van Rooy and like him a pupil of the celebrated singing teacher, Stockhausen.

The course for the training of school supervisors and teachers has been greatly amplified, and will be in charge of Mr. Thomas Tapper, who is known throughout the country as an experienced lecturer in this field.

Bertha Harmon, the soprano, was the chief soloist of the Musical Festival held at Dallas, Texas, October 24–27.

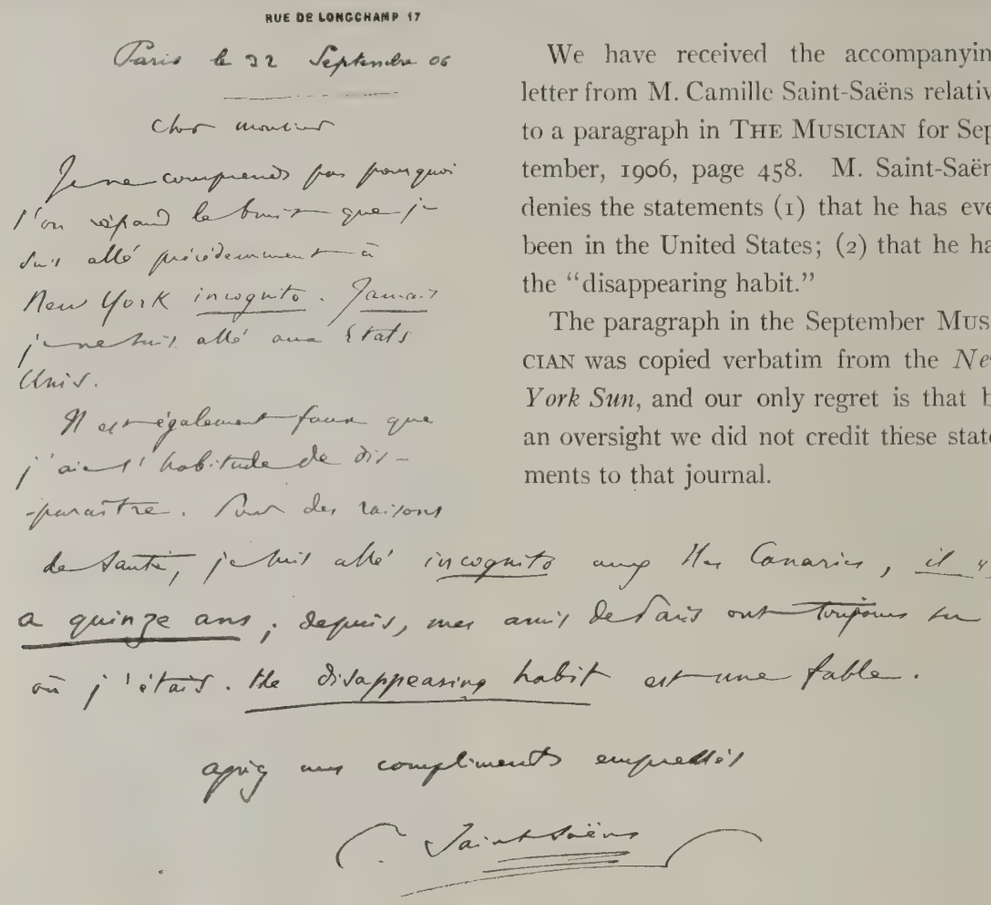
* *

Fannie Bloomfield Zeisler, the pianist, has fully recovered her health, and will be heard this season in many recitals, as well as soloist with the leading orchestras of New York, Philadelphia, and other cities.

* *

Olga Samaroff will appear as soloist with the Thomas Orchestra in Chicago, November 9, also with the Choral Symphony Society at St. Louis, January 11.

A LETTER FROM M. SAINT-SAËNS



RUE DE LONGCHAMP 17

Paris le 22 Septembre 06

Cher monsieur

Je ne comprends pas pourquoi l'on répand le bruit que je suis allé précédemment à New York incognito. Jamais je ne suis allé aux Etats Unis.

Il est également faux que j'aie l'habitude de disparaître. Pour des raisons de santé, je suis allé incognito aux Iles Canaries, il y a quinze ans; depuis, mes amis de Paris ont toujours su où j'étais. The disappearing habit est une fable.

Agrez mes compliments empressés

C. Saint-Saëns

We have received the accompanying letter from M. Camille Saint-Saëns relative to a paragraph in THE MUSICIAN for September, 1906, page 458. M. Saint-Saëns denies the statements (1) that he has ever been in the United States; (2) that he has the "disappearing habit."

The paragraph in the September MUSICIAN was copied verbatim from the *New York Sun*, and our only regret is that by an oversight we did not credit these statements to that journal.

LONDON LETTER

ORTON BRADLEY

The London musical season, which is on the point of commencing, bids fair to be the busiest on record. The last of the daily promenade concerts at the Queen's Hall is no sooner finished than the rush of the season begins. The date of the last promenade concert is fixed for October 27, and the same afternoon is to see the first of the Chappell Ballad concerts, which will be ten in number. The beginning of November will bring the first of the Boosey Ballad concerts. Before that date recitals are being given by Kreisler, Lady Hallé, and Leonard Borwick, Mark Hambourg, and Sarasate, who will give a third and last recital November 10. The Sunday Concert Society and the National Sunday League have already both begun their annual campaign. The former occupy the Queen's Hall every Sunday afternoon for twenty-six weeks with orchestral program in which the Queen's Hall Orchestra alternates with the London Symphony Orchestra. The latter occupy the Queen's Hall and about fifteen or sixteen other halls and theatres throughout the city every Sunday evening until May. Orchestral concerts will also be given at the Albert Hall every Sunday afternoon. Between November 5 and March 25, the London Symphony Orchestra will give their series of ten concerts under Richter on Monday evenings at the Queen's Hall. Henry J. Wood will conduct a series of eight symphony concerts on Saturday afternoons with the Queen's Hall Orchestra, between November 3 and March 2, 1907.

Chamber music will also be well represented this winter. The Joachim Quartet will give six concerts of Brahms music between November 21, and December 5. The Wessely Quartet will give four chamber concerts during the season and the London trio have announced a series of six programs. There are many other announcements too numerous to recapitulate, but among them some of the most interesting are vocal recitals by Kirkby Lunn, Charles Clark, and Ernest Sharp, and a rumor that at last a good site has been found for a new concert hall in Great Portland Street where at present there stands a church that has gone out of commission.

The German opera season in the new year at Covent Garden is already arousing great interest, and it is understood that the conductors are to be Arthur Nikisch and Michael Balling of Breslau and possibly also Henri Viotta of Amsterdam. Among the singers already engaged are Mesdames Aino Ackté, Marie Brema, Litvinne, Minnie Nast (of Dresden), Agnes Nichols, and Messrs. Van Dyck, Felix von Kraus, Flinhals (from Munich), and Hinckley.

The month of October always brings to an end the series of provincial musical festivals. One of the most popular of these functions is always the Birmingham triennial week of music. This year among the successful festivals have also been Norwich and Hereford. For the next festival at Norwich, 1908, Mr. Wood has been engaged as conductor and for the festival at Leeds next year Sir Charles V. Stanford has been reappointed. Grieg has an invitation to visit Leeds and conduct some of his own works.

An item of news which has created some excitement is the rumor of Patti's retirement. She is about to start on a "farewell" tour under the management of Percy Harrison and will commence her tour with a concert in the Albert Hall, December, but she will also appear at Mr. Harrison's concert in London next spring. No doubt we have all heard something like this before and some of us may recall an article in an esteemed contemporary which began "In the beginning God created the farewellers. Male and female created he them and their names were Adelina Patti and Sims Reeves."

The prospects for the winter on the Continent are no less full of musical interest than in England. The Opéra-Comique Theatre of Berlin has announced as its novelties this winter *Pique-Dame* by Tschaikowsky, *Lazy Hans* by Alexander Ritter, and *Dalibor* by Smetana. A very interesting revival of the ballet *Die Geschöpfe des Prometheus*, Op. 43, of Beethoven, is promised in January.

In the spring of 1907 the company of the Monte Carlo Theatre will visit the new Royal Theatre of Berlin for a season of opera in French. One of their items will be Berlioz's *Damnation de Faust*, which is also among the list of operas to be performed at the Opéra-Comique. At the Theater des Westens a revival will shortly be given of Lortzing's *Rolandsknappen*, which was produced at Leipsic, 1849, in connection with the unveiling of the monument in the Thiergarten which the sculptor Eberlein has executed in his honor.

A new concert hall has just been completed in the "place Nollendorf," Berlin, to be called the "Salle Mozart." It is to hold about fifteen hundred people. The new philharmonic concerts are to be given here this winter and Capellmeister Prills will conduct a series of popular concerts also. The building contains also a theatre, and this is to be occupied at once with the performances of Shakespeare's *Tempest* for which Engelbert Humperdinck has composed the incidental music.

The arrangements for the Parisian musical season next claim attention. First comes the Opéra. Here the first novelty is Massenet's *Ariane*, which is ready for immediate production. Paul Vidal, the new conductor, has been rehearsing with the utmost diligence, but has found time to finish his own opera, *La Fille de Ramsès*, which is to be the next novelty and will be followed by *La Forêt* by Félix Savard, a recent winner of the *Prix de Rome*. Among interesting revivals will be *Thamara* by Ducoudray, and the *Vestale* by Spontini. The latter was played this summer at the annual open-air festival at Béziers in the Théatre des Arénes and like *Armide*, by Gluck, attracted enormous audiences. It was first performed in Paris, Dec. 11, 1807.

The end of the present tenure of the lesseeship of the Opera is not until Dec. 31, 1907, so M. Gailhard has still more than a year of office, but he has already eight rivals in the field.

The Opéra-Comique, which with the Comédie-Française is forbidding hats to be worn in the theatre, is thereby reaping the gratitude of all opera-goers. The management has announced a very large and varied program for the year. No fewer than eight new works are to be produced: *Circe* by "les frères Hillemacher," *Ariane et Barbe Bleue* by Paul Dukas, *Le Chandelier* by Messager, *le Chemineau* by Xavier Leroux, *Phèdre et Hippolyte* by Vincent d'Indy, *le Songe d'un Soir d'Automne* by Torre Alfina, *les Armaillis* by Doret, and last but not least, *La Lépreuse* by Lazzarri. The libretto of the latter has caused Mr. Albert Carré, the director, no end of trouble. It was first accepted, then rejected on the ground that it was immoral, and now it has been accepted again and is to be performed.

There is some doubt whether it will be possible to produce *Madame Butterfly* by Puccini which is among the works named as being likely to be seen this season because of its similarity with *Madame Chrysanthème* by Messager, who has appealed to the "Commission des Auteurs" to decide the difficulty. There are also several other new works which are being considered.

The Lamoureux and Colonne concerts are now in full swing on Sundays, the one at the Théatre Sarah Bernhardt and the other at the Châtelet over the way.

Two new operas will be heard this winter at the Lyric Theatre, Milan: *Aben* by Lopez and *Edith* by A. F. Carbonieri (of Modena).

Two novelties are also promised at the Victor Emmanuel Theatre at Turin: *Velda* by Leopoldo Cassone and and *Il Battista* by Giocondo Fino.

The municipal council of Modena has voted 26,000 lire as a subvention for the carnival opera season. Massenet's *Werther* and Berlioz's *Damnation of Faust* are mentioned as two of the works to be performed.

Francesco Cilea is also engaged on a new opera and so deeply that he has abandoned his musical classes in Florence so as to devote himself exclusively to composition.

Carl Goldmark is just putting the finishing touches to his new opera, *The Winter's Tale*, although its production is not due till next autumn at Budapest.

What Kreisler and Kubelik say:

Dear Mr. Reindahl:
The two violins made by you, I have tried and have found them very beautiful. I believe they are the best among new violins made.
The varnish, in particular, is superb. The tone and speaking quality are of a correspondingly high order.
FRITZ KREISLER.

Endorsed by Jan Kubelik

This is the reproduction of a special Violin ordered by the famous Emile Sauret.

Have just finished violin for Hugo Herman, a perfect imitation of his famous Strad. Send for duplicate on trial. Write for Catalog.

PIANO TUNING PAYS

Our Graduates Earn $5 to $10 per Day the Year Round

THE TUNE-A-PHONE IN USE

We teach **Piano Tuning Action Regulating, Voicing, and Fine Repairing,** all in one, practical, easy and complete course, taken at your own home **by correspondence.** Under our PERSONAL ATTENTION system of instruction, and by use of our EXCLUSIVE invention, the **Tune-a-Phone,** ANY ONE WHO CAN HEAR can learn to tune. After two or three months of LEISURE HOUR STUDY, you can **begin to earn money** by tuning, regulating, and repairing pianos. When you have finished our course, we will grant you a **Diploma** accepted every where as PROOF OF SKILL. You will then be in possession of a business that will make you **independent and your own master for life**

We supply FREE a TUNE-A-PHONE, also a working model of a full-size, modern upright **Piano Action,** also the necessary **tools** for each pupil. We fit our students to command splendid profits in the pleasantest of professions.

THE ACTION MODEL

"My best day's earning has been to tune four pianos at $3 each."—(Rev.) C. D. Nickelsen, Hood River, Oregon.

"I made $36 last week, and $212 the last two months, tuning and regulating pianos."—Joseph Gribler, Astoria, Oregon.

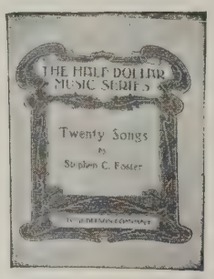
TWENTY SONGS

By
Stephen C. Foster

Edited by
N. CLIFFORD PAGE

Those persons who assert that America has no folk-music fail to take into consideration the importance of Foster's Melodies. Of the 164 or more songs by this composer scores are sung in every American household. "Old Folks at Home," which is also known as "Swanee River," is sung all the world over. As a token of the esteem in which he is held by Kentuckians, a statue of Foster, paid for by popular subscription, will be unveiled at Louisville in June. Kentucky thus bestows upon the author of "My Old Kentucky Home" a greater honor than ever paid before to an American musician.



This collection contains the twenty best-known songs by the founder of American folk-music. The refrain in most of the numbers is arranged for chorus, but, if desired, the songs may be sung throughout by a solo voice. The acccompaniments, which in the original editions show evident marks of hasty composition, have been carefully revised by the editor so as to better adapt them to the modern piano.

The words and music of Foster's songs are most happily wedded both in meaning and spirit. Their simple but inimitable style has given them a permanent place in the hearts of the people.

BACK NUMBERS

A limited number of complete sets for last year are still on hand.

The Musician for 1905 contains over 500 articles, essays, and sketches on all subjects pertaining to music; also 164 pages of vocal and instrumental music. Price, while they last, $1.50.

The Choir and Choral Magazine for 1905 contains nearly 140 practical articles of interest to choir leaders, choir singers, and organists; also 152 pages of church music. Price, while they last, 50 cents.

These prices include the cost of transportation. With but few exceptions there are no single copies available of either magazine.

OLIVER DITSON COMPANY, 150 Tremont St., Boston

INSTRUCTION BOOKS

The following works have made a place for themselves. Their success entitles them to further urging on the part of the publishers, in order to bring them to the attention of those who may not know them.

The Very First Lessons at the Piano

By MRS. CROSBY ADAMS . . . Price, 75 cents

The title gives the stage of work for which the book is intended. Unquestionably the interest which the contents of the book constantly awakens in the child is the secret of the great success the book has enjoyed. If you are doing work with children and are unacquainted with this book you are certainly missing one of the best things for beginners in piano playing.

Piano Technic for Children

By JULIA LOIS CARUTHERS . . . Price, $2.00

This work deals solely with the technic of piano playing, and presents the subject in a manner at once novel and unusually attractive. The seriousness of the system is none the less marked because of the "play" features on which the work is based, in fact, seriousness is its vital claim, and the attractiveness of presentation dispels the drudgery. It is a splendid book to use for young children.

Hand-book of 101 Exercises for the Voice

Compiled by J. H. GARNER . . . . . Price, $1.00

Teachers of singing will recognize in this collection many familiar and favorite exercises. They are chosen from the great and well-known masters. The revised edition contains additional exercises, making a larger total than the title calls for. A number of pages of blank music paper are bound into the book, thereby giving each teacher the opportunity to add exercises of his own. A useful, practical book.

The Elements of English Verse, correlated to Music

By ALICE C. D. RILEY . . . . Price, $1.50

This is a new work entirely unique in its contents, and provides most excellent instruction on a topic which is certain to engross the attention of educators. It is receiving most enthusiastic recommendation from those who have examined it. Teachers of music in the schoolroom, and children in general, know what Mrs. Riley's work stands for. She has much to tell them in this new book.

THE STORY OF

Music and Musicians

By LUCY C. LILLIE

THIS VOLUME seeks to interest young students in music in the technique of their art and in the associations around which great masters have worked. It sketches the history of music in brief outline and treats of the personal and professional life of the great figures in the musical world during the past. An admirable introduction to a study of music in detail, and a book that will prove an inspiration to every student.

FOLK-SONGS
and Other Songs
FOR CHILDREN

Edited by
JANE BYRD RADCLIFFE-WHITEHEAD

TO a musical child there is nothing that will give greater delight than this beautiful collection. It originated in the idea of acquainting children of the new world with some of the songs which, in the old world, have kept their hold on the affection of the people for a long time; folk-songs chiefly, which, because of their simplicity and naïvete, must appeal particularly to the young. In some cases the words of foreign songs have been replaced by simple English ones, but the melodies have been kept intact.

Out of this fragrant, old-time garden the editor has gathered this volume, including at the same time a few simple melodies and child-songs not out of keeping with the plan of offering to mothers, teachers, and lovers of children, music that is simple and child-like in its appeal.

The book contains one hundred and forty-one songs, comprising two hundred and twenty-six pages of music, is printed on paper of the best quality, and is bound in attractive and serviceable covers.

THE ADORATION

A CHRISTMAS CANTATA
For SOLI, CHORUS, and ORGAN
By GEORGE B. NEVIN

This, the first choral work of length by one of the best known and most popular writers of church music is, like all his work, tuneful and thoroughly singable. The voice parts lie well within average compass, each of the solo quartet has a solo, the organ part gives the singers support without going afield in search of independence, and the entire work may be readily performed by the average choir.

While the effectiveness of the work will naturally be somewhat in proportion to the size of the chorus, the cantata can be well rendered by a choir of eight voices. A quartet or chorus for men's voices and a number for women's voices require at least a double quartet choir.

The work opens and closes with the hymn *ADESTE FIDELES*, in which the congregation joins.

A devotional spirit characterizes the work which, with its brevity, well adapts it for use in connection with the church service. The time of performance is approximately twenty minutes.

CONTENTS

1. CHORUS. "O come, all Ye Faithful."
2. BARITONE OR BASS SOLO AND CHORUS. "Behold, a Virgin shall Conceive."
3. CHORUS FOR WOMEN'S VOICES WITH SOLO. "In Reverent Awe and Solemn State."
4. CHORUS FOR MEN'S VOICES. "Then sweeping through the Arch of Night."
5. CHORUS. "Softly the Starlight."
6. TENOR AND SOPRANO SOLOS. "And Lo, the Angel of the Lord."
7. CHORUS. "Glory to God in the Highest."
8. ALTO SOLO AND QUARTET. "Hushed at length the Gracious Song."
9. CHORUS. "Amen! Lord, We bless Thee."

ESTABLISHED 1850
BY MOSES A. DOW.

The WAVERLEY

claims the proud distinction of being the oldest and best-known story magazine published in America. Time was when ***The Waverley*** was in every home and read by young and old alike. *You* remember *those* stories, and such stories they were—so intensely interesting, so exciting ! ! Well, ***The Waverley*** is just the same to-day—the same size, the same shape, the same captivating stories, *only better and more modern;* but all stories just the same—pure, wholesome, entertaining stories of *love*, *romance*, and *adventure*, and *all complete in each number.*

A Page of Poetry

Then, too, there has been added a poetry page—poems of the long ago, poetic gems and sonnets perhaps almost forgotten, but which you want to read again.

The Story Teller

The story teller page is another new feature: real, short, crispy little stories of everyday life, but how entertaining ! !

Woman's World

The "Woman's World" department, not the humdrum sort, but facts and fancies worth knowing, helpful hints that really help, things worth doing and how to do them !

You liked The Waverley years ago; You'll like it better now

Do you know that there is *no other* magazine *just like* ***The Waverley***, and that it is ***only $1.00 a year ?***

◆◆◆◆◆◆◆◆◆◆◆◆◆◆◆◆◆◆◆◆◆◆◆◆

Special Subscription Offer

On receipt of $1.00 we will send you **THE WAVERLEY** ***each month from now on,*** **until January, 1908.**

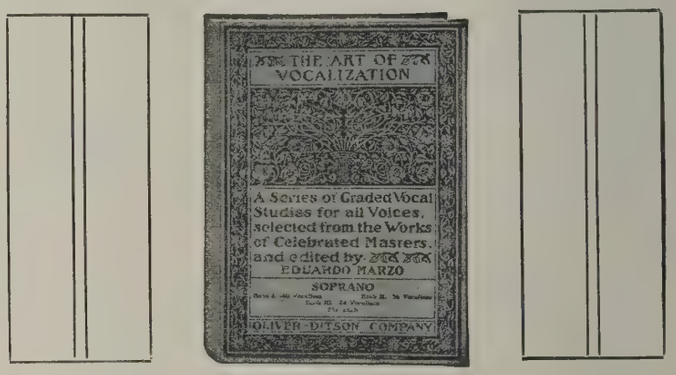
THE ART OF VOCALIZATION

A GRADED COURSE OF VOCALISES FOR SOPRANO

Compiled and Edited by EDUARDO MARZO



THE purpose of this Course is to place in progressive and systematic order before the teacher and pupil the best vocalises by the best masters. It covers the entire range of vocalization. While not intended for beginners, it contains all that is required for the complete study of the vocal art.

The vocalises have been selected from the works of Alary, Aprile, Brambilla, Bordogni, Concone, Crescentini, Lablache, Lamperti, Marchesi, Nava, Paer, Panofka, Panseron, Savinelli, Sieber, and others. Each number has been chosen not only for its intrinsic merit, but also because of its pedagogical value.

Each set of vocalises covering a special difficulty is preceded by a page of the exercise which they illustrate. Special instructions are given for practicing scales, arpeggios, grace notes, the mordent, detached notes, syncopation, trills, etc. None of the vocalises are transpositions. Each is in its original key, and was written especially for the soprano voice. The order of progression has been carefully arranged so that the vocalises may be taken up consecutively.

The Course does not pretend to teach singing without the aid of a teacher. It merely places in view all the best material that can be gathered for the study of vocalization.

BOOK I. 40 VOCALISES
BOOK II. 36 VOCALISES
BOOK III. 24 VOCALISES

Price each, post-paid, 75 cents. Copies sent for examination

MUSIC PAPER

For years it has been impossible to procure MUSIC PAPER, from any source that did not blot or blur, but the march of progress has made it possible for us to offer what is without exception the most satisfactory and perfect Music Writing Paper ever sold; and we guarantee it to withstand climatic changes and absorb perfectly any ink used upon it.

The ARTIST PAPER is manufactured in America, and the DITSON IMPORTED PAPER is manufactured in Germany.

A MONTHLY PUBLICATION
THOMAS TAPPER, Editor

PUBLISHED BY
OLIVER DITSON COMPANY

SUBSCRIPTION PRICE

SINGLE COPY.....$ .15
PER YEAR.....1.50

Free of Postage in the United States, Canada, and Mexico.
Foreign Postage, per Year, 72 Cents.

The entire contents of this Magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured*, money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

DISCONTINUANCE.—IF YOU WISH THE MUSICIAN STOPPED, AN EXPLICIT NOTICE MUST BE SENT US BY LETTER; OTHERWISE IT WILL BE CONTINUED. ALL ARREARAGES MUST BE PAID.

Subscriptions to this publication are not discontinued at expiration unless so ordered by the subscriber. The courts invariably hold a subscriber responsible to the publisher for the subscription price of all papers received until the paper is paid for in full up to date and ordered discontinued.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor, MR. THOMAS TAPPER.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in THE MUSICIAN, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 18th of the month.

All REMITTANCES should be addressed and made payable to

OLIVER DITSON COMPANY
Publishers of THE MUSICIAN,
Ditson Building, 150 Tremont Street
BOSTON, MASS.

PUBLISHERS' PAGE

OF EXCEPTIONAL INTEREST — The books which we mention below are so valuable and so worthy of note, that we have reprinted complete the announcements made in the November number of THE MUSICIAN.

Do not fail to avail yourself of this opportunity to secure these works at the low Introductory Rate.

LITTLE PISCHNA BERNARD WOLFF is promised this month. We call attention to the Publishers' Page in the September and October numbers, for full description.

The advance offer price of 40 cents, including postage if cash accompanies order, will be withdrawn January 1.

STUDIES FOR THE DEVELOPMENT OF RHYTHM AND EXPRESSION, CARL PREYER — We have received many orders for these Studies, which will be published in two books, each containing eight Studies, Nos. 110 and 111 of the Ditson Edition, and will be issued some time during the month. Price of each book 75 cents, but until January 1 we offer copies for 30 cents and the two for 50 cents. These prices include the cost of postage if cash accompanies order.

FROM BACH TO CHOPIN — compiled and edited by Clayton Johns, consists of difficult sections and phrases from the masterpieces of pianoforte music. These sections and phrases lend themselves readily to an indefinite number of repetitions without interrupting the flow of the movements from which they are taken. The chief claim of the work is that while possessing all the advantages of purely technical exercises the student is constantly accumulating material which may be applied throughout a course of musical training when the quoted works are taken up as a whole for study. Besides the exercises chosen for their special difficulties, a number have been added for the sake of their general usefulness in finger development. The exercises may be practiced in any tempo, thus being available for students of moderate attainments as well as for those more advanced technically.

This work was published in November. It is No. 109 of the Ditson Edition; price $1.50.

Until January 1 copies are offered for 60 cents, which includes postage if cash accompanies order.

This book was advertised in the September number by mistake as *From Bach to Beethoven.*

MENDELSSOHN'S SONGS WITHOUT WORDS — A new and altogether superior edition of Mendelssohn's *Songs without Words* will be shortly issued as No. 98 of the Ditson Edition. The volume has been edited by Dr. Percy Goetschius.

Not only has every detail of notation, fingering, and phrasing been carefully scrutinized, but the *formal structure* of each number has been carefully indicated. This publication is distinguished from all others as the *Analytic Edition.* No modern composer has shown a more sensitive feeling for form, proportion, and balance of design than Mendelssohn; therefore the conscientious study of the structure of the *Songs without Words* is in itself an education in the fundamentals of music form.

The names given by Stephen Heller, which have become identified with these songs in the popular mind, will be found in this edition. A valuable feature of the book is the critical introduction by Daniel Gregory Mason.

These features, combined with engraving, printing, and binding of the highest class, make this the very best edition of this popular classic published.

The price of the book will be $1.00, but in advance of publication we offer copies for 40 cents, which includes the cost of transportation if cash accompanies order.

This offer expires January 1.

THE ART OF VOCALIZATION — Compiled and edited by Eduardo Marzo. A graded and systematic series of Vocalises for all voices, selected from the works of Alary, Aprile, Bordese, Bordogni, Brambilla, Concone, Crescentini, Lablache, Lamperti, Marchesi, Nava, Paer, Panofka, Panseron, Savinelli, Sieber, and others.

Soprano	100 Vocalises in 3 books	Now ready
Mezzo-Soprano	100 Vocalises in 3 books	Now ready
Alto	100 Vocalises in 3 books	In press
Tenor	100 Vocalises in 3 books	In press
Baritone	100 Vocalises in 3 books	In press
Bass	100 Vocalises in 3 books	In press

The price of each book will be 75 cents, but in advance of publication the price will be 40 cents for each. This price includes postage if cash accompanies order. The volumes for Soprano and Mezzo-Soprano have been published, and the introduction order withdrawn.

TESTIMONIALS OF "THE ART OF VOCALIZATION"

The new studies (*The Art of Vocalization*) strike me as being most acceptable as teaching work. I like the general idea very much indeed; they seem to be well graded and carefully selected. . . . I shall certainly use them in future.

CLARENCE HAY.

The Marzo Solfeg. compilation is just what I want. I have used Garcia for a beginning, for eight years, and now comes the Marzo. I think it the *cream* of them all, and as soon as they come from the press shall begin right away their use. I thank you a thousand times for acquainting me with them, and at just this time when we need them. They should not be used with the young student, but are just the thing for the advanced and professional — myself.

BRUCE HOBBS.

I wish to say that I have examined *The Art of Vocalization* for Soprano carefully and find them splendidly adapted to the needs of vocal students after the first year. These exercises are most carefully graded and contain the very best material available for the systematic and progressive development of a singer.

CHARLES B. STEVENS.

I will say that *The Art of Vocalization* for Soprano will fill a long-felt want, and if the following ones are as good, they will no doubt be a great success.

H. S. TRIPP.

HOME SONGS — was an instant success. Since publication two editions have been sold, and a third is almost gone. We have just issued an edition for the holidays in cloth gilt. Price, $1.00, post-paid. The copy in paper cover with cloth back is 50 cents, post-paid.

CLASSIFIED ADVERTISEMENTS — We are unavoidably delayed in starting the Classified Advertisements in the November number of THE MUSICIAN, but they will be found in the December number. The cost of four lines is $1.00, and of each extra line, 25 cents. Four-line advertisements in six consecutive issues will cost $5.00, and larger advertisements in proportion.

The Classified Department will enable advertisers to try THE MUSICIAN at an extremely low cost. Teachers, schools, and conservatories will be able to carry a permanent announcement or to notify their friends and prospective patrons of any special plans for the approaching seasons, changes of address, etc. Dealers in musical instruments can take advantage of the Classified Advertisements to offer special bargains, such as a second-hand piano, organ, or clavier.

The Classified Department will be especially valuable for announcing the publication of new books and music, thus assuring a wide introduction in the shortest space of time.

As a special inducement, all advertisements in Classified Department, accompanied by cash, and received in December, 1906, will be inserted for seven months at the price of six months.

CLUB OFFERS — We invite you to send your Magazine Club Orders to us, if THE MUSICIAN is included.

We will meet the price of the Magazine Subscription Agencies. If you haven't *Who's Who among Periodicals*, send for it. It is free.

MUSICAL GIFT BOOKS — The custom of giving music books as Christmas gifts is firmly established. It is a very pretty custom, and we urge teachers to present suitable volumes of music to favorite or deserving pupils.

Our pamphlet entitled *Musical Gift Books* will be sent free to any address on request, and on other pages in this number will be found advertisements of timely and interesting volumes.

OPERA SINGERS — The new edition of *Opera Singers*, bound in cloth, is now ready. We hope you will order a copy for yourself, and one for your friend.

This volume is printed and bound in the very highest style of the art, and gives pleasure wherever shown. We recommend it to teachers, to be kept in their studios for the entertainment of guests or pupils who may have to wait for a lesson or an appointment. Price, $1.50, *net.*

We shall publish in December an Introduction Offer of the Ditson Edition.

No teacher, school, or convent can afford to overlook this. It is free on request. The prices quoted will not be made unless the order is written on the coupon which accompanies the offer. Do not fail to send for it, if it has not already reached you.

ARE YOU DOING YOUR BEST — to promote a community interest in music? If you are not, and need inspiration, read *Idealism in Music* by F. H. Shepard in the August number of THE MUSICIAN.

In every number of THE MUSICIAN will be found articles by the Editor on this most timely and interesting topic.

THE HALF DOLLAR MUSIC SERIES — This series of music volumes has been planned to give, at a popular price, a varied selection of attractive music. The contents of each volume have been carefully chosen from music of proven acceptability. In no other form can so much desirable music be obtained at the price. The contents of many of the books would, if bought

separately, cost at least $5.00. In attractiveness of typography and binding the volumes far surpass all other low-priced collections of music.

Send for catalog or ask your dealer to show them.

Do not accept any substitutes.

GRAND RENEWAL OFFERS FOR DECEMBER

THE MUSICIAN and any number of Tapper's *Graded Course*, Studies and Pieces, $1.75.

THE MUSICIAN and Mason's *Pianoforte Technics*, Nos. 1 or 2, $1.75.

The same in cloth, complete, $2.75.

THE MUSICIAN and Elson's *Dictionary*, $1.75.

THE MUSICIAN and any volume of the Musicians Library, paper, $2.25.

THE MUSICIAN and any volume of the Musicians Library, cloth, $3.25.

THE MUSICIAN and the *Art of Vocalization* by Marzo (any single book), $1.75.

THE MUSICIAN and *Guide to Parsifal*, $1.75.

THE MUSICIAN and *Guide to the Ring of the Nibelung*, $2.00.

THE MUSICIAN and *Symphony since Beethoven*, $1.75.

THE MUSICIAN and *Home Songs*, $1.63. Same, cloth gilt, $2.00.

THE MUSICIAN and *College Songs*, $1.63. Same, cloth gilt, $2.00.

THE MUSICIAN and the new edition of *Opera Singers* (bound in cloth), $2.25.

THE MUSICIAN (for two years). This can either be sent to your own address for two years, or your own and another address for one year, $2.50.

We will, on receipt of $4.50 from any subscriber, send THE MUSICIAN to four addresses for one year, their own among the number.

TESTIMONIALS

NEW YORK.

Dear Sir: —

I beg to acknowledge receipt of the copies of Musicians Library, recently sent me, with many thanks. Like the rest of the monumental editions of musical masterworks, these volumes are models from every point of view. I would particularly commend the firm on the volume of songs by our American composers. They thoroughly deserve this recognition, and I am sure this publication will also serve to enhance the market value of American compositions.

I shall take great pleasure in recommending the Musicians Library to my pupils.

Yours truly,

(Signed) F. A. ARENS.

Mr. A. S. Vogt, conductor of the far-famed Mendelssohn choir of Toronto, Canada, writes: —

"I have had much pleasure in reading your Christmas Cantata, *The Adoration*, by George B. Nevin, and desire to express myself as having been most favorably impressed thereby. The general outline of the work with its clever contrasts in part-writing for ordinary mixed chorus, for chorus for women's and men's voices respectively, solos and instrumental accompaniment, combine to render the work a very attractive one for use during the Advent season or sacred concerts generally. I take much pleasure in recommending the Cantata to the favorable notice of any choir in search of an effective and well-scored novelty."

Tali Esen Morgan, director of music at the Ocean Grove Auditorium and conductor of the New York City Oratorio Chorus (800 voices):—

"Your Cantata, *The Adoration*, is tuneful, devotional, and well written. I feel sure it will prove a welcome addition to the already large number of works on this subject I hope to be able to use it later."

Several years ago I sent you a subscription for THE MUSICIAN for my son Howard as a birthday present, which is greatly appreciated, and its arrival looked forward to with interest each month; and I would advise any mother who is selecting a birthday present to try THE MUSICIAN, and let the whole family enjoy its beautiful music and splendid reading. It is something to be shared by all. Thanking you for sending THE MUSICIAN,

MRS. E. B. MILLS, *Ind.*

THE MUSIC IN THIS NUMBER

Spinning Song.
A Carriage to ride In. } Carl Reinecke.

Carl Reinecke's songs for children are universally considered to be unique compositions of the kind. These two are among the best of the collection. The first has a characteristic figure for left hand in the accompaniment to suggest the movement of a spinning-wheel, which should be played with considerable motion and very smoothly. Notice in the second song the staccato passages for left hand in the accompaniment. While there is an absence of technical difficulties in both songs, both can be studied with care, for they are striking examples of how to accomplish artistic results with simple means.

Lady Bird.
Guardian Angels. } Robert Schumann.

Here are two more exquisite gems for young people, from a group, the Op. 79 of one of the immortal masters of the music art. In both songs the accompaniment at times reproduces the voice part, but is often independent. The first should be sung gracefully, with freedom, and some animation. The second suggests a cradle song, and the subdued mood will be appreciated. A singing legato is essential in the accompaniments and for the second a judicious combination of both pedals will heighten the general soothing effect.

Under the Christmas Tree. Paul Hiller.

A bright, vivacious piece for young pianists of advanced first or second grade. Both hands play frequently in the treble clef. Notice a three-note group at the beginning. The left takes up a similar figure and both alternate for thirteen measures. The three-note group is generally maintained throughout the piece either in the right or left hand. There are two musical periods, the second in D major with the first repeated and varied. Points for study are legato playing of broken chords, independence between hands, and when required, both playing exactly together. Two and three tone chords, also fragments of a secondary melody, are also employed in the left hand.

Little Reapers' Song. Robert Schumann.

This is No. 18 of the celebrated set of piano pieces, Op. 68, known as the *Album for the Young*. Some of them in character are appropriate also for mature pianists. This one has many interesting features. The first melody four measures repeated with a single two-note chord as the fundamental bass. This occurs again after a second four-measure section in G.

A third section, F major unison for both hands, eight measures, leads to a reappearance of the first section in the new key, the second this time in C, which is the original key. By this simple, yet ingenious device, the piece ends in its proper key, with the last eight measures varied as a sort of *coda*.

The right hand often plays a secondary melody in combination with the principal theme. The piece should be played gracefully, with motion, observing accents and phrasing marks with attention.

Under the Mistletoe. T. H. Rollinson.

This is one of Mr. Rollinson's most pleasing compositions arranged for four hands by Rolly King. Naturally the *primo* plays the melodic portions of the piece, sometimes doubled in the octave, other times combined with notes or two and three tone chords to strengthen the fundamental harmony played by the left hand. In duets the important thing is to have both performers play as nearly like one person as possible. If each performer can memorize his part, so much the better. It can be done with some study and perseverance. In most of the so-called "two piano" concerts both performers commit to memory and the results amply justify the time and patience expended.

Dance of the Toys. Franz Behr.

Another pleasing duet for young pianists. There are two principal melodic sections repeated, followed by a trio. There is no return to the initial portion of the polka, indicated, but if desired, the ending can be at *first ending* on initial page. Some of the suggestions offered in the preceding piece will apply with equal force to this one. Strict attention to time and rhythm is essential, and there should be also freedom and grace in style without evidence of stiffness or labored effect.

The King of Love My Shepherd Is. William R. Spence.

The composer is well known for many excellent church anthems, songs, and other pieces. This is a melodious setting of a familiar hymn adapted for tenor or soprano. Beginning with a four-measure introduction, the voice has the opening stanza 4–4 like the usual hymn-tune style. The verse beginning "And so through all the length of days" is set in 12–8 rhythm, which is preceded by an interlude more animated. He begins the final brilliant climax which is maintained to the end.

The pianoforte accompaniment has several rhythmic changes, including two measures 2–4 and the closing measures 6–8. The pianist should follow the voice part with care, not playing the climaxes with undue force. If played on the organ, many of the repeated chords should be held, as, for instance, in the 12–8 section three eighths should be played as one quarter. Pedal should be held for repeated notes, excepting for change in harmony. The organist will need to study the accompaniment carefully for proper adaptation to the instrument

My Rose of Yester-e'en. Marie Rich

A brief song of poetic sentiment that is retrospective in thought. The singer will find few difficulties of a strictly technical nature. Alternating rhythms of 4–4 and 6–8 serve to express the text with the best effect, and it will be observed that the proper expression is everything in a song of this character. Many of the chords in the accompaniment if rightly played will suggest "harp effects" which the composer evidently intends. Pedal indications are explicit, and in passages marked *pp* use both pedals, the right damper pressed down about one half or thereabouts.

Now sleeps the Wave. Agathe Backer Gröndahl

A song of retrospect and contemplation. The mood suggests somewhat of sentiment. For medium voice in comfortable range extending only to D♮ on fourth line. The expression of the text is the important feature and technical difficulties will not trouble the singer to any extent. The accompaniment is sustaining throughout, mostly in chords, which should be played with moderate, full singing tone, always legato.

Intermezzo. Rudolph von Liebich.

This is an excerpt from the composer's *Norwegian Suite* dedicated to the distinguished pianist Emil Sauer of Vienna. It is in form of a slow waltz, *rubato*, that is, not in strict time, machine-like, but a little capricious, as suits the mood of the pianist. There is a principal section, G major, repeated, a second section, E minor, leads to a return of a portion of the first theme, in which the piece ends. The melody should be well marked, but smoothly played. Many measures for right hand offer excellent practice for double touch where both melody and contributing accompaniment are played.

Twilight. Rubin Goldmark.

This is the first of a group of six pieces for piano numbered Op. 7. No. 6 was published in the November issue of THE MUSICIAN. The word "twilight" aptly describes the mood, and in this the pianist can indulge his temperamental instinct, and give it the necessary poetic "atmosphere." The wide chords in *arpeggio* need considerable practice to play smoothly. While no pedal indications are given, it is a piece where the proper use of the pedals will aid greatly in the interpretation. In fact, in many measures, especially at the end, both pedals together seem to be essential. Such measures are expressive of a mood that the pianist should feel within himself before he can give adequate expression. And it is so throughout this exquisite little tone poem.

Read The Latest LYON & HEALY Bulletin

RARE OLD VIOLINS

¶ Lyon & Healy's position in this country as collectors of old violins of the highest grade is absolutely unique. Our sales are many times greater than the combined sales of all other houses in the United States.

¶ Active European representatives are constantly forwarding valuable specimens, so that we may always be relied upon to supply all requirements.

¶ The title "Mecca of Violinist and Violin Lovers" was applied long since to our violin department, and it shall always be our ambition to merit the distinction.

¶ Old violins are sold for cash, or part cash, and the balance in monthly payments covering a period of two years.

¶ Two or three violins will be gladly sent on seven days' trial and approval.

¶ The following old violins now on hand are especially recommended as excellent values:

No. 1251. Sebastian Klaz, Mittenwold, 1761, a magnificent specimen . $350.00

No. 1368. Old Italian, small model, mellow tone 200.00

No. 1853. G. R. Ruggeri Cremona, Amati type $500.00

No. 1758. P. Sylvestre, Lyons, 1842, perfect condition 150.00

No. 307. Old Mittenwold, beautiful tone $100.00

Write for a free copy of Lyon & Healy's Musical Handbook, containing a complete inventory and descriptions of old violins now on hand; also thousands of other articles of interest to musicians.

Address: LYON & HEALY, 28 Adams Street, CHICAGO

NEW WORKS
OF THE GREATEST
EDUCATIONAL VALUE

GURLITT ALBUM

For the Piano. Price, 75 cents

Carefully selected, edited, and annotated from various works of this favorite author by W. S. B. MATHEWS.

This is a volume of rare educational value and superior attractiveness. The pieces are largely of the second and third degree of difficulty.

This book can be used to good advantage in conjunction with Mathews' "Standard Graded Course" or to accompany any second or third grade studies.

THE MOST VALUABLE TEXT-BOOK OF MUSICAL HISTORY IN THE ENGLISH LANGUAGE

HISTORY OF MUSIC

By W. J. BALTZELL

PRICE, $1.75

A Text-book for Classes. A Manual for Private Reading
For Colleges, Conservatories, and Clubs

Comprehensive—Concise—Practical

A History of Music brought up to date, arranged in lessons of suitable length so that two can easily be prepared every week, with helps for teachers and students, questions on the lessons, review outlines, topics for essays, tables, and complete indexes, including pronunciation of names. Copiously illustrated. Each lesson has a number of paragraph heads, giving an outline for study and review.

SELECTED "CZERNY" STUDIES

A GRADED COURSE

Edited, Annotated, Explained, Fingered by EMIL LIEBLING

In Three Books **Grades II to VI**

90 CENTS EACH

A new and valuable addition to the educational literature of the pianoforte. A graded course in Czerny, with copious annotations and explanatory text of the most careful and exact character, both as regards fingering and phrasing, and technical and musical interpretation. This work represents a careful sifting and selection from the entire works of Czerny. The editorial work has been done by one of America's eminent and most successful teachers. Volume I begins at about Grade II and Volume III ends at about Grade VI. The grading is very close throughout. No greater technician than Czerny ever lived, and this course offers a valuable and condensed compendium of his very best work. The various studies are in all styles and cover every department of piano technic.

HANDEL ALBUM

A collection of favorite pieces for the Piano with Portrait and Biographical Sketch

Price, 60 cents

Handel, in our opinion, has never been fully appreciated by the American teaching public. The overwhelming genius of Bach has rather thrown Handel in the shade, yet for technical, and at the same time interesting work, Handel is to be preferred. This volume can be taken instead of either Bach's "Inventions" or "Little Preludes," and the pupil will derive just as much benefit and at the same time experience more pleasure. Selected and edited by THEO. PRESSER.

IN PRESS

Harmony and Musical Composition. W. T. Giffe.
Easy Sonatinas for the Piano.
Violin Method. Geo. Lehman.
Practical Sight Singing Method. Fred Reddall.
Piano Tuning, Regulating, and Repairing. Fischer.
Easy Dance Album for Piano.

Complete Catalogs sent free on Application.
To Responsible Teachers we will send on Examination any of our Publications at Special Prices.
Mail Orders Solicited and Filled to All Parts of the Country.

LOOK HERE

WAVING PALMS. Of all Waltzes recently published this one is the best and the most beautiful. It is the finest waltz of 1906, and there is nothing in the market so charmingly dreamy and perfect in rhythm. Grade 3-4. Six pages. Published at 60c. Introductory only 15c., post-paid.

STANDARD AMERICAN AIRS. A new medley **Overture** introducing all (14) well-known national airs. The arrangement is by **Geo. Rosey**, the famous composer of Honeymoon March, Handicap March, Espanita Waltz, etc. Grade 3-4. Nine pages. Published at 60c. Introductory only 15c., post-paid.

BUTTERCUP WALTZ. Just from the press and taken up by the best orchestras. Its principal themes, which are dreamy, are connected by brilliant but easy chromatic runs. A first-class teaching piece. Grade 3. Only 10c., post-paid.

ARNO. By **William Fletcher.** An Italian Water Scene. This beautiful Gondola song without words is being played by Sousa's and Duss' bands. Grade 3. Introductory 15c., post-paid.

JIGS AND REELS. Harding's all-round collection of 200 Jigs, Reels, and Country Dances. Can be used for Piano, Violin, Flute, or Mandolin. A large book of 63 pages. Fifty cents, post-paid.

LAST HOPE. An exceptionally fine new hymn, for Church or Home. For medium voice only. Adapted by **R. A. Keiser** from L. M. Gottschalk's famous composition. Words by **La Touche Hancock.** Only 10c., post-paid.

TRANSCRIPTIONS. (Grade V.) **J. Leybach's** brilliant Concert Transcriptions, **Oberon, Freischuetz, Faust, Norma, Sonnambula, Puritani, Palms.** Only 10c. each, post-paid, or 70c. for all seven.

RAGTIME TWO-STEPS. The most popular and best Rag Marches and Two-steps are: **Swipesy, African Pas', Sunflower Slow Drag, Manhattan Rag, Polka Dot, Chicken Chowder, Maple Leaf, Tickled to Death, Back to Life, Original Rags, St. Louis Rag.** All grade 3-4. Twenty-two cents each, post-paid, or 5 assorted for $1.00.

NEW MEDLEY TWO-STEPS. Seven bright, catchy Marches of medium difficulty, each one containing famous characteristic airs suggestive of the title. Americana, College Airs, Plantation Airs, National Airs, Irish Airs, German Airs, Scotch Airs. Ten cents each, post-paid, or 70c. for all seven.

FIVE NEW TRANSCRIPTIONS. (Grade IV.) By **F. W. Meacham,** one of America's best-known arrangers. The titles are: Old Oaken Bucket, Old Black Joe, Mocking Bird, Dixie Land, Old Folks at Home. Any one 10c., post-paid, or 50c. for all five.

FOR CABINET ORGAN. The Organist's Repertoire, Vol. I, 113 pages, 70 Pcs., **The Organist's Repertoire,** Vol. II, 114 pages, 66 Pcs. A grand Collection of original Compositions and Arrangements of the best Authors, also Preludes, Postludes, Offertories, celebrated hymn tunes, brilliant music for festive occasions, National Airs, etc Fifty cents per volume, post-paid, or $1.00 for both.

VIOLIN and PIANO. Artist Life Waltz, Strauss; **Thousand and One Night Waltz,** Strauss; **First Kiss Waltz,** Lamothe; **Valse bleue,** Margis; **Rakoczy March,** Berlioz; **Tannhaeuser March,** Wagner. All complete, beautifully printed on fine paper and correctly edited. Ten cents each, post-paid, or 60 cents for all six.

BEAUTIFUL STAR OF HEAVEN

By LOUIS A. DRUMHELLER Composer of "Echoes of the Wildwood," Etc.

This is without exception THE PRETTIEST REVERIE ever written, and the truth of this statement has been demonstrated by the phenomenal sale which it has enjoyed during the last few months. Above you will find an excerpt which you will try over on your piano, but we can assure you that you must have a complete copy to fully appreciate its merit.

It is on sale wherever music is sold, but should you not be able to procure it from your local dealer, we will give you the benefit of the following liberal offer. It might be well to mention that as a teaching number it has already proved its value, and if you are thus engaged you should have it in your repertory.

If unable to secure it at your dealer's, send 18 CENTS IN STAMPS AND WE WILL MAIL YOU A COPY POST-PAID. Send stamp for our catalog of Latest Music

TWO SONG CYCLES *by* MARY TURNER SALTER

A NIGHT IN NAISHAPÛR
Cycle of Six Songs for Low Voice
Words by
NATHAN HASKELL DOLE

I. Long, Long Ago
II. In the City, the Misgar
III. The Song
IV. The Moon has Long Since Wandered
V. If I could prove My Love
VI. The Farewell

Net, $1.25

In this Cycle of Oriental songs, Mary Turner Salter has achieved the most original work that has yet come from her pen. The verses are full of the imagery, the languor, and passion of the Orient, and the music invests them with the rich perfume and glowing color that belong to them.

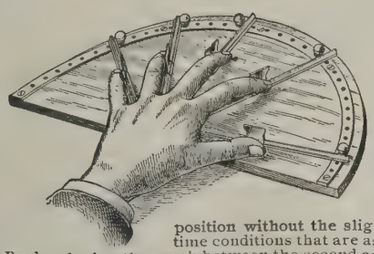
LOVE'S EPITOME
Cycle of Five Songs
Words by
THE COMPOSER

I. Since First I met Thee
II. In the Garden
III. She is Mine
IV. Dear Hand, Close held in Mine
V. Requiem

Net, $1.25

These five songs give charming expression to different moods of the one passion of love. There is a certain unity binding together the utterances of contrasted feeling. They show a marked lyric gift, an excellent power of characterization, and highly finished workmanship.

G. SCHIRMER, 35 Union Square, NEW YORK



Kursheedt Hand Expander

PRICE, $3.50. BY EXPRESS, $3.75

As the endorsements of great pianists and teachers testify, the Hand Expander will, after conscientious practice, abundantly supply nature's deficiencies.

Some students have attempted to stretch the fingers on the piano and the result has usually meant injury to their hands and the instrument. Ivory keys cannot support or stretch the ligaments; no exercise of big chords can be mastered unless the fingers be supple and sufficiently expanded. The Hand Expander will reduce the hours of practice in the case of all students with small hands. By examining the apparatus students and teachers will find that they can put their fingers in any position without the slightest difficulty. Daily use of the Hand Expander will produce in a short time conditions that are astonishing. Fingers may be stretched and curved in almost any position. By developing the reach between the second and fourth finger and between the third and fifth finger, the third or fourth finger will acquire strength and independence if worked in the way mentioned in the directions, and enable the student to play exercises that he could not before attempt. Several specialists have written works about finger gymnastics, but no theories can ever take the place of realities. The Hand Expander is a real invention, endorsed now by a number of the greatest pianists and teachers of the United States. These great artists have not only endorsed the Hand Expander, more than that, they have declared it to be a necessity for not only pianists but for all musicians with small hands and weak fingers. Many schools and studios have adopted the Hand Expander with excellent results.

Patented in the United States, Canada, and Foreign Countries. **FOR SALE AT ALL LEADING MUSIC STORES**

NEW PUBLICATIONS

VARIATIONS ON

BALKAN THEMES

FOR PIANO

By Mrs. H. H. A. Beach

Op. 60 **Price, $1.50**

Haunting melodies, reflecting, mirror-like, the rare beauty and pathos of mountain legend, the tragedy and happiness of a wondrous people and a primitive life. Of unknown origin, these tunes have passed from generation to generation of peasants, and are to be heard everywhere in the vicinity of the mountains and neighboring villages.

DESIRE

A COMPOSITION for the PIANOFORTE

By CHARLES S. BURNHAM

Price, 30 cents

This piece, not difficult, is for the cultivation of delicacy in expression and development of a sustained legato style in both hands. Teachers could not wish for a better composition.

TRANSCRIPTION for the PIANOFORTE

of the celebrated

IRISH FOLK SONG

By ARTHUR FOOTE

Price, 50 cents

CORNELIUS GURLITT

Four Compositions selected from Op. 201: —

Peasant's Frolic. (1c)	30
Venetian Serenade. (2a)	30
Song of Victory. (2b)	30
Cathedral Echoes. (3a)	30

Excerpts from "Melodious Studies," Op. 201, which form a group of pleasing morceaux in the earlier grades.

No. 1 will be found of great value in accustoming the young player to left-hand independence. No. 2 is in the barcarolle rhythm, agreeably varied and developed. No. 3 is a march with a strongly accented melody and some groups of small chords. In "Cathedral Echoes" we have an impressive choral in full harmony, afterwards repeated in a varied manner, with broken chords and arpeggios.

Two Pianoforte Compositions

By LEO OEHMLER

Op. 77. On the Village Green. (3a)	40
Op. 81. Sylvan Serenade. (3b)	50

Both pieces are highly attractive in point of melody and rhythm. Op. 77 affords much excellent practice in staccato playing, and will be found very useful in habituating the pupil to keep strict time.

The "Sylvan Serenade" contains tuneful, flowing melodies for both hands, with a simple accompaniment, and is of value for the cultivation of a good cantabile style both in single notes and in legato octaves.

CHRISTMAS SONGS

*BLUMENSCHEIN, W. L. Bethlehem Song. (Soprano or Tenor)	40
*BREWER, JOHN HYATT The Angels' Christmas Song. (2 Keys)	50

18 Selected Songs for Medium Voice	1 00
18 Selected Songs for Low Voice	1 00

Four Songs

By J. W. BISCHOFF

I long for You. G (d-g), E (b-e)	50
The Summer Wind. A♭ (e♭-a♭), F (c-f)	50
A Tragedy. D♭ (d♭-a♭), B♭ (b♭-f), G (g-d)	50
Teach Me, O Lord. D (d-g), C (c-b), A (a-d)	50

Dr. Bischoff's talent for effective vocal expression is exemplified afresh in these four new songs just issued.

The first is a setting of John Boyle O'Reilly's well-known lines. The melody is in the declamatory style, is decidedly original, and is underlaid by sustained harmonies of a weird and romantic description.

The next two songs, "The Summer Wind" and "I long for You," are set to words by Walter Learned. The melodies are graceful and flowing, and instinct with a tender but strong sentiment, leading up to very effective climaxes.

The sacred song in this group is simple in construction, devotional in tone, and well adapted for an offertory solo. The melody is very pleasing and well suited to the words. All the songs are quite practicable, and the accompaniments are highly artistic, without being difficult.

Four Songs

By Charles Fonteyn Manney

Op. 18

No. 1.	Affinities. D♭ (f-g), B♭ (d-e)	50
No. 2.	Love's Largess. G (d-g), E♭ (b♭-e♭)	50
No. 3.	How Many Times do I love Thee. E♭ (d-g), D♭ (c-f)	50
No. 4.	Transformations (Such a Starved Bank of Moss). E♭ (e♭-a♭), C (c-f)	50

These songs belong to the highest class of lyric compositions. The words, tastefully selected, are in themselves musical, and the composer has been careful to give each word and thought an appropriate and felicitous musical expression.

The accompaniments, while not technically difficult, are essential complements of the voice parts, forming with them an integral tone structure, and they are beautiful specimens of that important and often slighted feature of the art.

They will doubtless be heartily welcomed in musical circles.

"COBWEBS" AND OTHER SONGS by Gerrit Smith

Op. 24

No. 1.	Cobwebs. A♭ (d-f♯)	50
No. 2.	Billy and His Drum. B♭ (d-g)	50
No. 3.	Dandelion. D (d-g)	50
No. 4.	The Candy Lion. D (d-e)	30
No. 5.	The Swing. F (d-g)	30
No. 6.	Slumber Song. A (c♯-f♯)	50
No. 7.	Learning to Play. G (d-g)	50
No. 8.	Marching Song. F (d-f)	30
No. 9.	The Difference. G (d-e)	50
No. 10.	Boy and Girl. (a) The Boy. E minor (e-e) (b) The Girl. E (e-f♯)	50
No. 11.	The Friendly Cow. F (c-f)	30
No. 12.	The Policeman. D (b-e)	30

A notable contribution to the lyrics of child-life are the twelve new songs by Dr. Smith. They are not juvenile jingles, intended for nursery performances, but are mature songs on subjects relating to childhood, and attractive alike to young and old. The words are selected from the charming poems of Abbie Farwell Brown, James Whitcomb Riley, and Robert Louis Stevenson.

The songs are all lightly fanciful, delicate, dainty, melodious, thoroughly vocable, and pervaded by a flavor of the musical humor. They contain no technical difficulties and all are within a very moderate vocal compass. The accompaniments are finely and ingeniously conceived.

A set of altogether charming musical settings of very characteristic children's poems. They are to be sung to children rather than by them, although adults will find just as much genuine enjoyment in them.

"A group of them would make an effective recital number."—*Good Music.*

Thank you very much for the songs you sent me. They are beautiful and I shall take pleasure in teaching them to my pupils.

OSCAR SAENGER.

I have always admired your versatility in composition, and it seems to me that in these sketches you are especially happy in adapting a pure art style to the demand for "four sketch songs" which seem so popular with singers to-day. I shall call the attention of some of the leading singers of Columbus to this last series, for they are surely worthy of success.

J. B. FRANCIS MCDOWELL,
McDowell's Musical Institute.

THE MUSICIAN

COPYRIGHT, 1906, BY OLIVER DITSON COMPANY

Vol. XI, No. 12 BOSTON, MASS., DECEMBER, 1906 Yearly Subscription, $1.50 Single Copy, 15 Cents

A LILIPUTIAN COMPANY OF SINGERS

ELISE LATHROP

The name Liliputian will probably suggest to most readers of THE MUSICIAN the clever company of that name composed of clever adult actors whose stature was that of ordinary children, and which has several times toured this country. A recent "Liliputian" was "Master Gabriel" of Buster Brown fame, and who, tiny as he appeared on the stage, was declared to be twenty-one years old. But the company to which this article refers is made up exclusively of real children, whose ages range from six to fifteen.

Several years ago an Italian, Cavalier Ernesto Guerra, organized a company of youngsters, chiefly Sicilians, and began training them to give performances of grand opera in their native Italy. The children of peasant parents, poor and ignorant, but with voice and love of music with which almost all natives of Italy, that land of melody, are blessed, and many of them familiar with the music of Italy's famous composers, his task was less difficult than may at first appear. He set quietly to work to carry out his plans, and the first performances were given in small towns in southern Italy, with sufficient success to warrant him in continuing, but without attracting much attention. Last year, believing the time had come for more ambitious ventures, he engaged the Quirino theatre, in Rome, for a season of several weeks, and there his little company played to large audiences, at prices ranging from 60 cents down, and soon became the talk of the city. It was then that the present writer witnessed their performance.

Much discussion was aroused as to the propriety of allowing these representations, the newspapers were filled with letters for and against it, many people indignantly demanded government intervention, although it appeared that there was no law which exactly covered the case. And although singing so continuously, often at two performances in one day, can hardly fail to harm such young voices, it was quite generally acknowledged that the children were well treated, and they looked contented and healthy. Their director not only taught them words, music, and action of the operas in their *répertoire*, but looked after all the details of their daily life as well. The children while in Rome took their dinners at a restaurant near the theatre, and thither they were marched in procession. Crowds used to assemble to watch them as they made their way to and fro, and many people patronized the restaurant at the hour when they were to be seen seated at a long table with "Papa" Guerra in charge. Later, when newspaper discussion was at its height, when mothers of families were almost daily inditing epistles to the papers protesting against such young children being allowed to do the work entailed by the performance of their *répertoire*, they were kept less in the public eye, although some of them might still be seen at any performance at close range, when during the intermissions, between the acts, they passed among the audience selling pictures of the chief singers of the company.

Their *répertoire* included *The Barber of Seville*, *L'Elisir d'Amore*, *La Sonnambula*, and other works of the old Italian school, together with a short operetta written especially for them by the director. These operas were given with appropriate, though simple scenery and stage settings, in correct costume and make-up, to the accompaniment of a very small orchestra and directed by Guerra himself at the piano, he taking care that the young voices should not be drowned by too much volume of sound. The Quirino is a fair-sized theatre, constructed as are so many of the Italian theatres, with a flat parquet, and several tiers of boxes.

Of the little members of the company the most interesting and talented girl was Linda Levy, aged fifteen, whose singing of the florid arias of the early Italian school was really remarkable. In *The Barber of Seville* she interpolated the difficult *Proch Air* and variations, singing with such true prima donna style that she quite brought down the house.

A LILIPUTIAN COMPANY IN THE THIRD ACT OF "LUCIA"

Breda, a boy of about the same age, had much success as Figaro, and in similar *rôles*. Good looking, and with ideas about acting such as one would rarely find in an Anglo-Saxon boy of his age, lack of self-consciousness and temperament, he was truly amusing in comic scenes. He was quite at ease on the stage, his facial expression and gestures were lively and natural, and although his voice was not in the least remarkable, he sang well.

One of the boy sopranos who sang the tenor *rôles* was little Alfredo Belletti, aged perhaps ten. He was an attractive Nemorino in *L'Elisir d'Amore*, in which opera Breda was the hated rival, the sergeant. Alfredo's looks of outraged pride and wounded love were droll indeed. Some one in the audience at one of these performances christened him "The little Caruso," and it really seemed possible that he might have seen the great tenor in this *rôle*. His manner of folding his arms and pacing the stage was most amusing, as was the tragic expression which he maintained without wavering when the sentiment of the moment demanded tragedy. He was decidedly funny in the scene where Nemorino drinks the potion and

ALFREDO BELLETTI IN "L'ELISIR D'AMORE

it goes to his head. He danced and capered in most approved comic style. Much interest was felt in the audience as to what he would do with the famous *Una furtiva lagrima* aria, but he quite rose to the occasion. His voice had shown itself sweet and clear in the earlier portions of the opera, a little weak in the lower register, as was to be expected, but never forced, but in the aria he sang with the abandon of a veteran. All the high notes were held according to the most approved Italian traditions, and in the latter part he fell on his knees and hurled out the high note with the purity of tone and apparent absolute unconcern for anything but emotional effect that enraptured the audience. Applause was hearty and a repetition clamored for. Little Alfredo was quite ready to accord it, but the director very wisely refused to allow the unnecessary strain on the child's voice.

After this opera, it being so short a one, several concert numbers were added to the program, including a gondola song, a duet by Breda and another boy of his age, who sang with an abundance of fervor and sentiment bewildering to the Anglo-Saxon listener, who could not refrain from wondering what and how American boys of that age could be induced to sing in such a style, but which in no wise surprised an Italian audience.

Then came what was billed as the *sfida*. One by one three boys came out and sang *La Pira* from *Il Trovatore*, each grasping a stage sword, which he flung down with a gesture of great defiance at the proper moment. The first two young singers were interesting, but when the third appeared, and in a tiny thread of a voice, but with perfectly true intonation sang, the audience was so convulsed with merriment at the sight that one could hardly hear the child. It was little Pasquerello, aged *six*, who had figured in the chorus earlier in the evening. He was not to be outdone in defiance by the other two much older boys; he hurled his tiny sword to the ground with scorn worthy of an old actor, while the fiery intensity of his expression was irresistibly funny. No amount of mirth in the audience could overcome his seriousness, however.

Cavalier Guerra has certainly trained these children well. There was no hesitation in the attacks, all seemed perfectly sure of the music, the enunciation of most of them was remarkably good, and this in spite of the fact that the music was sung in Italian, while as the children of peasant parents they probably spoke dialect only in their homes. The chorus acted quite as much as the usual adult choruses in grand opera, and one small prima donna clung to the footlights and the centre of the stage with equally adult determination.

During the past year Guerra has continued his travels with the little company and during the summer they were amazing audiences in southern Austria with their interesting and creditable performances.

WHAT MAKES THE PIANO RATTLE

Piano tuners are sometimes called upon to "tune" gas fixtures as well as pianos. Frequently the owner of a fine upright "grand" enters a vigorous complaint because "that piano rattles so." Then the piano tuner packs his few tools and some extra felt, glue, and parts of the "action" into his long, slender valise, and proceeds to feel the pulse, pound the chest, examine the tongue, and overhaul the internal economy of the offending piano. His experienced ear tells him that the piano is all right. His intimate knowledge of the mechanism and make-up of the piano assures him that nothing is the matter with the instrument, and he says so.

"But the piano does rattle," insists the owner. "Now listen when I touch this key." And sure enough, a decided buzz and jingle are heard.

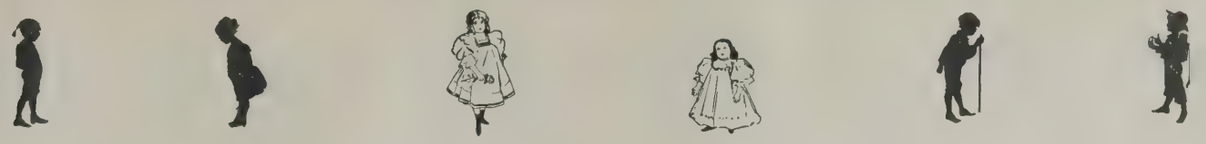
"It is not the piano," replies the tuner, and he touches the key again, at the same time glancing around the room. "There it is," he says at last, pointing to the glass globe around the gas jet; "there is the rattle"; and the irritating noise is silenced when he removes the glass globe.

This is a common experience of piano tuners. Certain notes in the piano vibrate in harmony with a gas fixture, a picture frame, a china plaque hung against the wall, or the bric-a-brac which commonly litters the top of the sensitive instrument, and the innocent piano is blamed for the discordant jangle. Pins, buttons, and other things foreign to the piano which find their way into the instrument set up complaints and harsh cries when certain keys are struck, and recently a piano tuner in Evanston, searching for the "rattle," found and restored to the young woman who used the instrument her upper set of false teeth, which had disappeared mysteriously the week before.

Besides coins, buttons, pins, and toothpicks, the piano tuner's salvage includes hairpins, pocket-knives, paper cutter, manicure instruments, knitting needles, matches, jewelry, nails, tacks, bits of glass, pieces of picture wire, buckles, collar buttons, sleeve buttons, rings, and even money which had been placed in the case for safe keeping and then forgotten. — *Presto.*

WEBER'S HOUSE IN HOSTERWITZ

WEBER'S BIRTH HOUSE IN EUTIN



CHILDREN SINGERS AND THEIR CUSTOMS, OR, THE BOY BISHOP OF SALISBURY

LOUISE KARR

How many American boys and girls are there, I wonder, who know anything about the life and amusements of the boy choristers of England during the Middle Ages? There are so many things we have to learn about in history, so many battles between countries whose names we cannot pronounce, so many kings who seemed to do nothing but quarrel with their neighbors and try to get the better of their own brothers and sisters, that we forget that all this time the children were living and growing, studying and playing, learning to be men and women, just as they are to-day.

They had their own ways of doing all these things, to be sure, and, perhaps, if we were to wake up some morning and find ourselves suddenly transplanted back to the fifteenth or sixteenth century, we should find things queer enough — we might have a hard time getting used to some of the customs and occasionally get a little homesick, remembering all the comforts we had had in the twentieth century, but we should very soon get used to the life, and find that, although there was not so much time for play, the zest for it was all the greater, and that our sports were very important, not only to ourselves, but to our parents and friends.

In the old Cathedral of Salisbury, the cathedral with the beautiful spire, in the south of England, near where the famous Druid stones are standing, there was a fine choir school. It exists to this day, but I am speaking of the time back in the sixteenth century. There were thirty or forty boys in this school, and every boy had a beautiful voice. They came and lived near the cathedral, and, because they had such beautiful voices, their parents didn't have to pay anything for their board or schooling. The boys had to sing in all the services of the church, in return for this, and as it was a cathedral school, where the Bishop lived with his retinue of clergy, priests, and clerks, they had to do a great deal of singing and go to a great many services.

When I say they lived in the cathedral, I don't mean that they lived in the church itself, but in the cathedral close, as it is called, the ground which is right around the cathedral, and which is surrounded by a high wall, where there are built all the houses for the Bishop and his clergy, and the dormitories and schoolrooms for the boys and men who help in the service.

The cathedral is not like our churches, but is a grand building of stone, with spires and towers and arched windows and long, dim aisles and a deep, wide choir with an altar and rows and rows of seats where the Bishop has his great carved chair in the midst, with smaller, but still handsome chairs on either side to the number of eight or ten for his clergy, and seats for the thirty boys and twenty or twenty-five men who make up the whole choir. This is a very grand sight when the choir is full on a great ceremonial day, when all are in their robes of lawn and silk, and they

SALISBURY CATHEDRAL

march around in the service, and the censers full of incense are swinging and the dim light falls through the painted windows.

The close is right around the cathedral, and the houses are built of stone or brick; there are beautiful flower beds, and trim lawns, and old, old trees; arched walks, and not far away is the churchyard, with its queer stones and inscriptions.

The boys had to work pretty hard in this cathedral school. They got up by half-past five in the morning and had their breakfast of porridge at the long wooden tables in the dormitory, and were ready for work by six o'clock. At six o'clock promptly came the "Grandsire," as he was called, the teacher who gave them lessons in writing, reading, and — what do you think? — in *manners*. Yes, they had lessons in manners. What would a little American boy think if he had to study manners for two hours every morning, from six o'clock to eight? I am afraid he would get pretty homesick for his kind mother and indulgent father. Well, after the manners and the reading, they had to study music from eight to twelve: scales up and scales down, scales soft and scales loud, scales fast and scales slow, till they could do anything with their clear, high voices, swell to a mighty tone, or die away to the merest whisper, just as the old choirmaster directed. And then at twelve, they had — "something to eat," do you ask? No, indeed; they had more arithmetic, more writing, and more *manners*, till two. What they did at two o'clock the old book doesn't say; but I do hope they had something to eat then, if it wasn't more than a bit of dry bread.

After this bit of dry bread, or whatever it was, they had more music and more manners in the afternoon, all the time singing in the cathedral services, which came at stated hours on week days and nearly all day on Sundays and Festivals, and no doubt had some time to play cricket and all the outdoor sports the English boy is so fond of beside. The books don't say so much about their play time every day, but they do speak of a curious custom they had once a year, and that is what I am going to tell you about.

People didn't keep quite so close to Christmas Day in those times as they do now, but they had a great deal of sport for two or three weeks right around the Christmas season. The 6th of December was St. Nicholas' Day. Everybody knows who St. Nicholas was. He was the patron saint of boys and sailors. He wasn't always the funny old man he is now, with a white beard and driving his reindeer team over roofs and down chimneys; he got that way when he went to Holland; but at the time I am speaking of he was a fine, handsome saint, just the kind that boys admire and want to be like. So on the 6th of December all the boy choristers in England took St. Nicholas' Day for their own, and all the old people stood aside and let them do it. The boys got together and chose one of their number to be Bishop, and after he was chosen he selected his clergy. Then they all robed themselves in the robes of state — their mothers and sisters must have worked hard making these robes, just like the ones the real Bishop and his clergy wore; and the Boy Bishop had a mitre, — the tall, hatlike crown the Bishop wears on his head; and a crozier, — the staff which shows his authority. After the boys had got on all their robes, they marched in state into the cathedral, and took possession of everything; they conducted the services, read the prayers, dismissed the people with a benediction, and sometimes even preached sermons. All the people came to church just as usual, and let the boys do this, because it was the Christmas season. Everybody obeyed the boys, and they said how everything should be done, and acted just as if they were the grown-up clergy. This wasn't merely for a day or two, but it lasted from the 6th of December till Holy Innocents' Day, the 28th of December; so it was for more than three weeks that these boys had everything their own way — and don't you believe they enjoyed those weeks after all their year of hard work? I hope they didn't forget the "manners" they had learned in the mornings from six to eight o'clock.

Now, in Salisbury, one year between St. Nicholas' Day and Holy Innocents' Day, what do you think happened? Why, the Boy Bishop that all were obeying in love and fun became very ill, and before the time came for him to lay off his robes of authority and become a boy again he laid off all that belonged to him in life, and died — died in office, as they said. And then all the people came together and they gave this little boy a grand funeral, just as grand as they would have given to a great and distinguished bishop. They went through the service and paid him all the honors

that could have been paid to any one outside of royalty itself.

They did more than this. They made a statue of him with all his canonical robes on, his mitre on his head, his crozier in his hand, trampling on a lion-headed, dragon-tailed monster, and they set it up in the cathedral, and there it is to-day. And if any of you go to Salisbury Cathedral, you must not fail to look at the statue of the little Boy Bishop, who died just at the joyful Christmas time, when all his world was paying him homage, and when he thought, perhaps, that he was the happiest boy alive.

WOLFGANG MOZART, IN HIS FIFTH YEAR

LETTERS TO A YOUNG MUSICIAN

W. D. ARMSTRONG

Studies

Johann Sebastian Bach wrote most of his instrumental compositions for his children. The *Wohltempirte Clavier* was an innovation, and has been since then the basis and foundation of all deep musical culture.

You will not study his works at first, but they have been alluded to in order that you may early in your career know of them and look forward to the time when you can play and appreciate their great resources.

All study should be systematic and progressive, there are time problems and technical problems; sometimes they are united in the same phrase. The metre, duple and triple (duple being the most natural, and in the last analysis the triple finally resolves into the duple) once firmly established, is of indispensable help in analysis.

For this reason a variety of studies and etudes have been written calculated to make you understand this important item. You are cautioned not to attempt any that are intricate, such as three notes against two, for at first it causes confusion, and results in that unsteadiness of playing which is much to be discouraged. There are many not purely mechanical, but musical. Turn to these often, as the melodic instinct may be quickly dulled by too much dry finger drill. Frederick Chopin has named some of his most interesting pieces etudes; not on account of their technical nature or unique figuration, but because they have thematic content and are worthy a place on concert recital programs.

In the time of Clementi and Czerny, purely technical pieces were written to develop the hands and fingers. Page after page and sequence after sequence of the same motive appears. It is no wonder that Beethoven's nephew revolted at such instruction, and that some of our later composers would not submit to this ordeal, declaring that it drove all the music out of the soul. You see, there are extremes; still, there is an almost unlimited amount of published music to draw from, so you can find about what you will need that is both technical and musical.

This conversation took place between a young pupil and her aunt, which will serve to emphasize one point; namely, that the mind must be on the work, and there must be some definite goal to be attained.

Aunt. — "What are you practicing now?"

Pupil. — "My scales."

Aunt. — "How long do you practice them a day?"

Pupil. — "One hour."

Aunt. — "Why do you practice them?"

Pupil. — "I don't know."

Aunt. — "That's strange! I suppose it's the way you do at school?"

Pupil. — "We just keep going over and over different things."

Aunt. — "This is a most remarkable system! Your mother would better have you stop just now — and get a new start in the right direction."

Haydn, Mozart, and Beethoven, have written sonatas which are considered models, and require considerable ability to interpret them. Like the Bach *Fugues*, they contain mines of musical wealth, and should be studied and played. Our young students play Mozart and Haydn in their teens, but Beethoven is for mature minds.

The sonata is a special recognized form of composition, and it is necessary that one understand its construction. For this reason the sonatina (or little sonata) came into existence; it leads from what is most simple to the most complex. You can advantageously study quite a number of sonatinas, by analyzing their form and mastering their techinque. The same may be said of the Bach *Inventions;* they precede and are an introduction to the *Preludes* and *Fugues.*

You have no doubt learned in reading the history of music and the lives of the composers that each one studied some other instrument along with the piano.

Bach played the clavier, organ, and violin.

Handel the spinet and organ.

Haydn the clavier and violin.

Mozart the harpsichord and violin.

Beethoven the clavier, organ, and violin.

It is not to be expected that you will become expert in more than one; but it will broaden your musicianship and give you a wide view. The violin is excellent for the study of tone and phrasing, and is acknowledged to be the most versatile and expressive of the whole family of instruments. Robert Schumann recommended the study of the organ, and in his *Rules for Young Musicians* he advises that one should embrace every opportunity to play on it, "and be amazed before this omnipotence of music."

WOLFGANG MOZART, AT FOURTEEN

THE YOUNG STUDENTS

GEORGIANA C. HOLMES

Does not the small beginner in the study of music deserve more sympathy from teacher and friends? How enthusiastic they are in their desire to learn to "play the piano," and how impatiently they wait for the first lesson.

The teacher and pupil are seated at the instrument, and in answer to the question "Do you like music?" the answer is, "Oh, yes; I love music."

One small boy who was very anxious to begin his lessons had a terrible awakening as to what learning to play the piano meant. After the second lesson he sought his mother, and in a hurt and injured tone said, "Mother, I cannot play anything, and I've had two lessons. Why don't she teach me?"

THE QUEST

HELENA MAGUIRE

Have you students who have entered the music profession, intending it to be your life work, ever thought of it as a Quest, or, if you have, ever realized how much your Quest resembles that of Sir Galahad's for the Holy Grail?

Sir Galahad followed a vision; you are following an ideal. Sir Galahad's Quest has been called a Seeking after Perfection, and surely that is what yours is. The great and wonderful thing about Sir Galahad's Quest was, *not* that he found that for which he sought and came to his crowning in the Mystic City, but that his Quest made of him the loveliest knight in all tradition. Even so, the greatest result that can come of a Student's Quest is that it makes him a great and noble human being.

There were many, many knights who went out from the Round Table in search of the Grail, but of them all only three, Lancelot, Percival, and Galahad, ever came within sight of that for which they sought, and only one, Galahad, ever came into his kingdom.

The others failed because they lacked the only means to true success, — courage to renounce whatever might hinder the pursuit, self-denial, and the patience to do one thing over and over, piling failure on top of failure, heedless how big the pile, if only, at the last, success might come.

When all the Knights of the Round Table set out upon the Quest, King Arthur grieved to see them go, for he said that "most of them would follow wandering fires, lost in the quagmire," and believed it would have been better had they remained at home to perform the ordinary duties of knighthood. And so it would have been. For see, — with one "all that he touched turned to ashes," and he came upon the vision too late to profit by it; many there were who went part way, encountered difficulties, and, becoming discouraged, gave it up and turned back. Others, growing wearied, turned their Quest from a Seeking after Perfection into a Pursuit of Pleasure. Do you recognize in these Knights prototypes of many who have *started* upon a musical career?

"But speak we now of Galahad, true knight," and of his manner of success.

In the first place he began by sitting down in the Seat Perilous. You know that there was one chair at the Round Table of which Old Merlin had said that whosoever would seat himself therein should lose himself, so the Knights shunned that chair very much. But Galahad said, "It is only by losing himself that a man finds himself." (Of course he meant that only by forcibly getting rid of his baser self could a man find the full power of which his higher self was capable.)

So he sat himself down in the Seat Perilous, and straightway over his head appeared the words, "This is the place of Galahad haut Prince." Doesn't this show that we must be bravely, self-forgetfully ready for whatever perilous (difficult) places may be awaiting us?

Here is the second point in his Quest: After he had shown that the place of a true knight is the place of peril, he started out. And Sir Gawain said that he would bear him company, if it so pleased him. "Sir," said Galahad, "that you may not do, *for I must go alone!*"

That is what every one must be ready to do who starts upon a career, — "go alone." There is little bearing company in career-making: each must go his own way, alone; be strong enough to face solitude and lack of sympathy and support, even when these are withheld by those from whom one had felt most sure of receiving them. Many you will meet on the road who will "speak you gently," but they will not bear your burden, nor will they go your journey for you. Each has his own Quest and is following it alone — and so must you.

Also, "Sir Galahad rode many journeys in vain." He was not always victorious or successful, any more than we are, and, good knight as he was, his vanity led him into certain grave errors which made all that he had done practically worthless. After each error he had to go back and start over again from the beginning, but each failure robbed him of a portion of his pride, and therefore each new start was made with just so much more humility until, after a long, long time, he was successful.

Then Sir Percival, telling what he knew of Galahad's efforts, said that his bridges were burned behind him. So that he had not the self-gratification of thinking that he was opening a royal road to perfection for all who wished to follow him. Here is how Sir Percival put it, —

> "Every bridge, as quickly as he crost,
> Sprang into fire and vanished,
> Tho' I yearned to follow."

So with us. We must not only make our own way to success, but we must also concede to others making their own way *in* their own way. We must not expect that if we do well others will follow in our footsteps. We must not think that if we succeed in hewing out a path to glory, however splendid, we are going to become leaders of men, with a great following, and that there is no *right* way but ours. We've just got to submit to seeing the road by which we have come close in behind us and to let those who come after follow out their own Quests by new ways. Each for himself. We complain of the loneliness of career-making, yet in a large degree it is inevitable. Oftentimes we make our own isolation. It is the primal instinct.

And lastly, Sir Galahad's pure single-mindedness and unswervingness of purpose caused him to become known as the "Simple Fool." Goodness is generally put down as Foolishness, Virtue as Folly, and he who puts aside the pleasant things of life to accomplish a vague, no matter how noble purpose, is pretty sure to be thought a Simpleton. Are not all musicians freaks to the unmusical, and all men of genius "mad"? In olden times it was called a "sacred madness," but to-day, less reverent, dubs it "simple lunacy."

All this being true, what is it that makes the Quest worth the following? Why, the very following itself, whatever it may be after. Whether it be a vision "Rose-red with beatings in it as if alive, with rosy colors leaping," or whether it be an Ideal all webbed with radiant tones and exquisite harmonies. Work for the work's sake, content to let success, triumph, and recognition be the *last* things in your life as they were in Galahad's. Let your *work* be enough for the present and believe in your ultimate success most entirely. Others have succeeded, so will you; only believe and keep your intention pure.

Galahad's song was, —

> "My strength is as the strength of ten
> Because my heart is pure.
> ...To me is given
> Such *hope* I know not fear,
> And, stricken by an Angel's hand,
> This mortal armor that I wear
> Is touched, and turned to finest Air.
> * * *
> So pass I hostel, hall, and grange,
> By bridge and ford, by park and pale,
> All arm'd I ride, *whate'er betide*,
> Until I find the Holy Grail."

CHRISTMAS BELLS

I heard the bells on Christmas Day
Their old, familiar carols play,
And wild and sweet
The words repeat
Of peace on earth, good-will to men!

And thought how, as the day had come,
The belfries of all Christendom
Had rolled along
The unbroken song
Of peace on earth, good-will to men!

Till, ringing, singing on its way,
The world revolved from night to day,
A voice, a chime,
A chant sublime
Of peace on earth, good-will to men!

FROM LIFE

JEAN URQUHARDT

There is a charming book, too little known among American readers, called *A Painter's Camp*, by an English artist, Philip Gilbert Hamerton.

In it, the author speaks delightfully of the sister arts, and somewhere voices the sentiment that, after all, self-confidence is the real sort of faith that removes mountains. But that is where our suburban young people are found most wanting when weighed in the balance. Perhaps the very limited opportunities for meeting others on a mutual musical footing may be responsible for this state of affairs, and may account for their painful timidity in performing before an audience, however small and uncritical.

One young girl said recently, that she always felt so sorry for her teacher, because he was compelled to listen to so many mistakes due to her dulness. I wondered if the millennium were really at hand, and looked hastily for the wings and aureola consistent with such tender susceptibility. Living near neighbors to Dame Nature does not incline the growing mind to flippancy. A girl of fourteen, questioned about her music, replied, "Yes, I play, and enjoy practicing. But I am not satisfied with myself. I want to know something of the structure of music." Now the paths of knowledge are none too flowery, and the desire to "see the wheels go round" is as laudable as it is unusual, in the budding pianist. Such a one is likely to play the written notes more or less correctly, and leave the matter of construction and intelligent phrasing in the hands of Providence. This was substantially the ground taken by a city miss I once knew. She always put her novel up on the piano rack and read a chapter while she played the scales, — and held it was no musical sin to do so.

The drudgery of the scales can be greatly mitigated by showing their why and wherefore. And interest may be greatly stimulated by giving the pupil the pattern scale of C (or A, if the minors are under consideration), and requiring as part of the next lesson another, made just like it, but on a different degree of the scale. Young pupils like to draw the scale in the form of the "side elevation" of a stairway, with whole and half steps in their proper places and with each rise lettered appropriately. The infant mind likes to deal with something tangible, especially if it approaches a picture in any way.

Perhaps if a little more confidence were displayed by the family it might aid our too timid young people in overcoming their diffidence when called upon to play. Rural parents are not given to seeing youthful Paderewskis, Pattis, and the like, in their offspring. In many instances the older folks have no personal interest in music, and merely tolerate the necessary "noise" of technical practice in order to please the children. As one doting, and yet doubting mother replied, when complimented on her daughter's progress, "Well, do you know, I am surprised, myself, to see how well she has done. She has always wanted to study music, and so I gave her the lessons, thinking that she would learn a few hymn-tunes to play of a Sunday afternoon, and that would be about all. But she has stuck to it so faithfully, winter and summer, that we feel quite encouraged." Perhaps we may smile at the ambition which vaulted only as high as a few hymn-tunes, but we forget that much the same standards prevailed not so many years ago in more thickly settled places. The non-musical nations have made such rapid strides within the last quarter century that, as a clever Englishwoman, a Londoner, once remarked, "See how much more is demanded now of even us amateurs! Why, my mother used to tell, in the days of her young womanhood, that if you could play the *Storm Rondo* and the *Battle of Prague* you were quite in the top of the tree."

CHILDREN'S FIRST VIEW OF GRAND OPERA

Fourteen hundred boys and girls in the Camden Theatre, London, were invited (through the London County Council) by Charles Manners, to see Grand Opera. Hands up, those who have seen a grand opera before. Only eight or nine. The boys cheer as only British boys can. The artists are recalled three times after each act and even four times. The principals are inspired by this youthful ebullition. Donizetti's *Lucia di Lammermoor* is performed. The full chorus and orchestra of the Moody-Manners Opera Company enter into the game with spirit. Mme. Fanny Moody offers prizes, one each to an elementary school boy and girl and one to a secondary school child, for the best essays describing their impressions, the story, the music, the performance, its effect upon them. Sir Walter Scott's novel may be consulted.

Mrs. Kennedy Fraser, a lady who has visited the spot portrayed and caught its romance, helps the young folk with a chat, rather too long and learned, on the opera, its place in history, its plot, and so on. She shows how music appeals to the ear, but the drama to the eye as well. Music enshrines verse in the memory. Listen to the orchestra, to the emotional element in the music, to the flowing melodies of Donizetti's period, the fashion of the leading actors singing airs in couples (cavatina and cabaletta), to the recitative which takes the place of speech in grand opera. Observe the crudity of the passions depicted: revenge, love, hate, consternation, wailing, and despair. Watch the development of the story.

But all this introduction is rather resented. The children want movement rather than mental pose. They get it. The girls are ready to shed tears over the lady intrigued into marrying against her choice, her madness terrifies them. The boys revel in the drawn sword, the vehemence of hate, the sorrows of the lover. These children are selected from schools in the four divisions of St. Pancras, elementary, industrial, secondary, pupil teachers' centres, and collegiate, all being Standard (Grade) VII or older children, with one teacher to every sixteen children. All are expected to write about the day. In fairness to South London a performance should be given there also. But the London County Council have no power to spend money thus. They merely accept the invitation of Mr. Manners, having read the plot of the opera. To give every London child such a chance once in its school life would require ten performances each winter in a place like the Albert Hall. Will a Carnegie offer to pay for such a treat?

London children are taken to art galleries, they read and recite dramatic literature, but have never before visited a theatre in an organized way, except to pantomimes and plays, and the opportunity of hearing first-class music is evidently seized eagerly. Possibly the idea is not new in the Provinces. The children laugh when Mr. Shepheard, the chairman of the Education Committee, suggests that the instruction now given is something far better than the schools give. It is a free exhibition of what an English opera is. Charles Manners asks if as few German, Italian, or French children have seen opera as the proportion is shown to be in London. Why should not English children be as well educated as they? To help the cultivation of English opera, he offers to give further performances to children for bare expenses. His company have an almost royal tour in the Provinces, and are satisfied in London to cover expenses, if only may be attained that great ambition, a national opera house. Now think of the great joy you felt when first you saw a grand opera finely performed, and you will envy these children their memorable experience. — *The Musical Herald.*

THE CHILD'S CHRISTMAS CAROL

FREDERIC S. LAW

The lewid people then algates agre,
  And caroles singen everi' crist messe tyde;
Not with schamfastenes bot jocondle,
  And holeybowghes aboute; and al asydde
The brenning fyre hemsten, and hem drinke
  And laughen mereli, and maken route,
And pype, and dansen, and hem rage; ne swinkep
  Ne noe thynge els, twalue daye thei wolde not.
— *Early English Poem on Christmas.*

I

Christmas is the birthright of the children; to them belong its songs and games, its peculiar sports and diversions. We grown-ups, to be sure, recognize it in a certain way. It means a holiday, a good dinner, — perhaps, too, an undesirable financial strain; but its chief enjoyment to us lies in the beaming faces of the little ones around us. The children of to-day have fallen heir to much that in earlier times was the undisputed possession of their elders. Many of the outdoor games popular among childhood, for instance, are plainly survivals of the dithyrambic sports of ancient Greece, at a time when armored warriors did not disdain to tread the steps now tripped only by tiny feet. The May-day songs and dances that diverted lords and ladies in Chaucer's day are now the especial pastimes of children. We of mature age have entered into the common light of day; they still linger in the magic twilight common alike to a youthful world and a youthful age.

The carol is also a part of the child heritage from bygone days. It originally meant much the same as the ballad; that is, a song mingled with dancing. Chaucer tells us of knights and damsels dancing to the "clere and swete caroling" of one who is singing for the dance. Later, applied to any song of festive character, it was finally associated with Christmas and with children as its singers. Carols sung by older people almost invariably degenerated into mere praises of feasting and good cheer. Nicholas Breton wrote in 1626, "It is now Christmas, and not a cup of drink must pass without a carol."

Though the significance of Christmas to us lies in the birth of the Divine Child whose advent banished the darkness of paganism, many traces of almost prehistoric superstitions and religions can be found in the customs that characterize it at the present day. Take the Christmas-tree, for instance. It is almost certain that it is a reminiscence of the ancient Egyptian practice of decking houses with branches of the date palm as a symbol of life triumphant over death. This significantly occurred at the winter solstice, which was the time of the Yuletide of northern nations, and thus fixed the date of the Christian festival. The glittering decorations of the Christmas-tree point to the worship of Pomona, the goddess of fruit and vegetation. The adornment and worship of trees in her honor was a ceremony of remote antiquity; it still lingered up to a recent day among the peasants of Cornwall, who were in the habit of visiting their orchards on Christmas Day with roasted apples and pails of cider to drink the health of the trees. It is related that Martin Luther, while traveling over a snow-covered country one Christmas Eve, was deeply impressed by the beauty and majesty of the sky with its hosts of sparkling stars beaming celestial radiance on the unsullied earth below. When he reached home he tried to describe it to his wife and children; but feeling that words were inadequate, he suddenly went into the garden, cut down a little fir-tree, dragged it into the nursery and put lighted candles on it. This is said to have been the first Christmas-tree. It is known to have originated in Germany, whence it was introduced into France and England; early German immigrants brought it to this country.

II

Like the ballad, the carol is simple and naïve in words and music; it makes its chief appeal to the young and to those without distinctively musical or literary culture. The oldest carols date from the Middle Ages, and generally formed part of the mysteries and miracle plays through which an untaught populace was instructed in Biblical history and church doctrines. These religious dramas were first introduced by ecclesiastics about the end of the twelfth century and frankly catered to the taste of the time. Reading and writing were unknown arts among the people; they were like children, and delighted in much that to us appears crude and uncouth — and even worse. One of these miracle plays, *The Creation of the World*, contained a number of carols and was given so late in London as the time of Queen Anne. It is difficult to understand its popularity at so recent a time, for from the play-bill still extant we see that anachronisms of the most glaring character abounded in it. The principal characters, for instance, were Adam, Eve, Herod, and — the Duke of Wellington! King Herod, by the way, was a favorite subject for children's carols; *vide* the following lullaby carol, published in 1587: —

Lulla, la lulla, lulla lullaby,
My swete little babie, what meanest thou to cry?
Be still, my blessed babe, though cause thou hast to mourne,
Whose bloud, most innocente, the cruell king hath sworne.

Macaronic carols — that is, those interlarded with Latin words and phrases — are among the oldest, *e.g.*: —

Christ was born on Christmas Day;
Wreathe the holly, twine the bay;
Christus natus hodie;
The Babe, the Son, the Holy One of Mary.

One of the most interesting macaronic carols is *Bringing in the Boa's Head.* This is the oldest existing carol and has been sung regularly at Oxford since 1346. Wreathed with laurel, bay, mistletoe, and rosemary, a boar's head is borne into the dining hall at the head of a procession, the precentor singing, "The boar's head in hand bear I, bedecked with bay and rosemary," etc., while the refrain, *Caput apri dejero, reddens laudes domino*, is taken up by the entire company.

The curious *Cherry-tree* carol was popular in England up to the beginning of the last century. It occurred in a Coventry mystery entitled *The Miraculous Birth*, founded on the apocryphal gospels whose legends furnished many subjects for the religious stage of the Middle Ages. Joseph was generally pictured as an old man, while Mary was represented as a young girl. His jealousy of her was a common feature of these plays. While the two are traveling she sees a cherry-tree and begs him to pluck some of the fruit for her: —

Mary. Amy swete husband, wolde ye telle to me
  What tre is yon standynge upon yon hylle?

Joseph. Forsothe, Mary, it is clepyd a chery tre,
  In time of yer ye myght fede you on yo fylle.

Mary. Now, my spouse, I pray yow to be hold
  How ye cherys growyn upon yon tre,
  For to have yr of ryght fayn I wold,
  And it plesyd yow to labor so mech for me.

Her husband, however, refuses this gentle request and speaks roughly to her, whereupon the unborn child finds voice and bids her reach out her hands for the cherries. She does so and the tree bows down so that she may eat at ease. She therefore sings: —

Now, I thank it god, yis tre bowyth to me down,
  I may now gadery anowne and etyn my fylle.

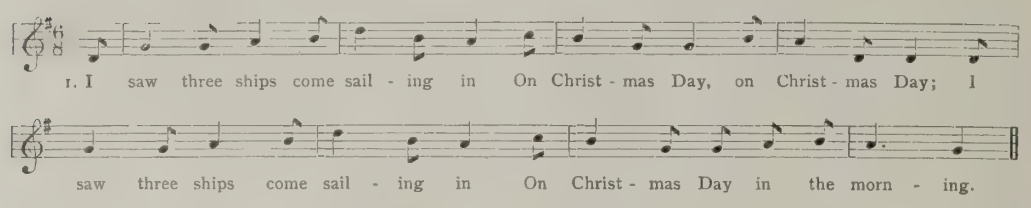
Joseph humbles himself: —

Now I know wyll I have offendyd my god i' trinyte,
  Spekyn to my spowse these unkynde wurdys.

A favorite carol for children is the one formerly called *On Christmas Day in the Morning*, now known as *I saw Three Ships come sailing In.* There are several versions of this, one comparatively modern, beginning, "As I sat on a sunny bank," and ending as follows — Joseph and his "fair ladye" being on board: —

Oh, he did whistle and she did sing,
And all the bells on earth did ring,
For joy that our Saviour he was born
On Christmas day in the morning.

I SAW THREE SHIPS COME SAILING IN



2. And what was in those ships all three?
   (The same refrain for all verses)
3. Our Saviour Christ and his lady.
4. Pray whither sailed those ships all three?

5. Oh, they sailed into Bethlehem.
6. And all the bells on earth shall ring.
7. And all the angels in Heaven shall sing.
8. And all the souls on earth shall sing.
9. Then let us all rejoice amain.

III

The Christmas carol originated in medieval France, where it was cultivated with so much enthusiasm that it soon spread to other countries — Germany, Holland, Italy, England. In France it was called Noël, the French word for Christmas. In England this became Nowell, and was likewise used as a refrain or joyous exclamation in the course of the song. It occurs thus in the following verses representing masquers making their rounds for wassail and largess. This custom, by the way, is evidently an echo of the Roman Saturnalia, which gave slaves and bondmen temporary freedom to meet their masters as equals and permitted them to ask for indulgences at other times sternly refused.

Nowell, nowell, nowell, nowell.
Who ys there that syngith so well nowell?

I am here, syre Christmasse.
Well, come, my lord syre Christmasse,
Welcome to vs all bothe more and lasse,
Com ner, nowell.

The naïveté of the early French Noëls may be seen by *Où s'en vont ces gais bergers?* here translated, it is believed, for the first time. The music, simple and ingenuous in character, is in the form of a gavotte, which invariably begins on the second half of a measure in quadruple time.

OÙ S'EN VONT CES GAIS BERGERS?

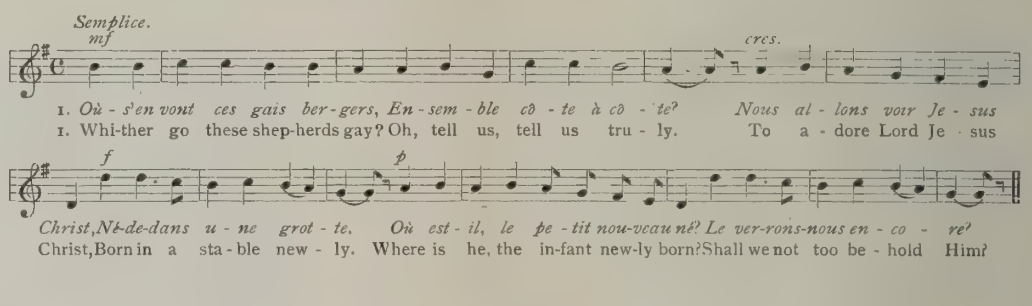
2. Marg'ret will go with me, too,
   She picks her way demurely;
   Trusses up her petticoat,
   The mud to pass securely.
   Where is he, etc.

3. Jeanneton says she'll not come,
   Behind us she has tarried;
   Lame her foot — 'tis all pretence,
   She's hoping to be carried.
   Where is he, etc.

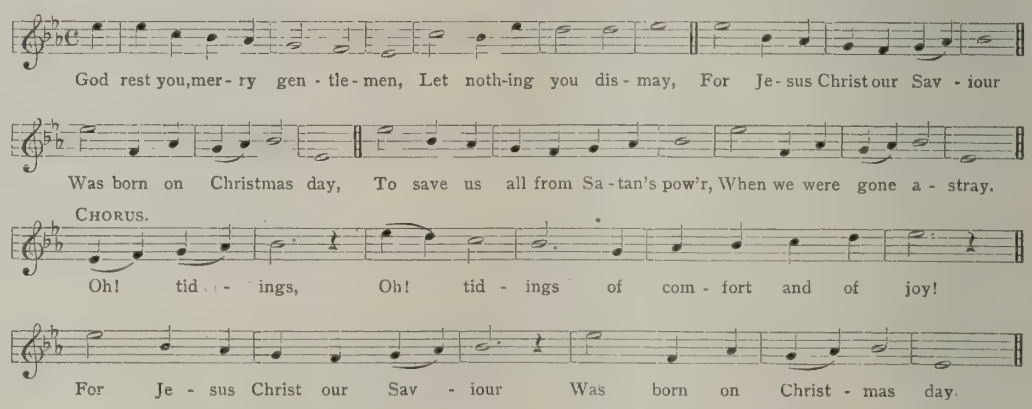
4. Robin pities her and runs
   To fetch his basket* for her;
   But she will not get inside,
   She sees us laughing o'er her.
   Where is he, etc.

* *Hotte*, a long basket carried on the back.

It is too long to give in full, but the following verses relate that when the children enter the stable, which has neither door nor window, they find the infant Saviour in the manger, Mary weeping and Joseph comforting her. The air is piercing cold, the ox and the ass bend over the child and try to warm him by their breath; and shepherds kneel in adoration, and then rise and go away laughing and dancing the courant and the volte — *riant et dansant la courante et le volte* — a thoroughly Gallic touch. The whole concludes devoutly.



GOD REST YOU, MERRY GENTLEMEN



Let us pray Lord Jesus Christ
  Never to forsake us;
Then when comes the last of days,
  To heaven above he'll take us.
Where is he, the infant newly born?
  Shall we not too behold him?

Dramatic representations of the Nativity have always enjoyed great popularity. In Gascony such representations lasted until the middle of the nineteenth century. They were composed of a number of Noëls, each relating to a separate episode, but so arranged that all formed a complete narrative. It is worth noting that seven centuries earlier Adam de la Halle, in his play *Robin et Marion*, grouped the most popular folk songs of his day in precisely the same fashion and provided them with a scenic background and dramatic action, thus anticipating the formal creation of the opera by nearly four centuries.

In Germany the play known as the *Kindleinwiegen* (Cradling of the Child) was given in the church as late as the eighteenth century. Boys personating the angels were stationed on a platform above the manger in which lay the child and proclaimed the miraculous birth. The shepherds were enacted by priests who gathered around the infant, singing hymns. Mary and Joseph with his servant stood at the head of the manger and sang Calvisius's old German carol, *Joseph, Lieber Joseph Mein.*

Mary. Joseph, dear Joseph mine, help me rock my Babe,
That God may reward me in heaven —
The Babe of the Virgin Mary.

Joseph. Gladly, my dear nurse, will I help thee rock thy Babe,
That God may reward me in heaven.

Servant. Rejoice, Christian multitude!
The King of Heaven, who was born of the Virgin Mary,
Hath taken on mortality.

Even now this cradling of the Child survives in the waxen tableaux representing the Nativity seen in many churches at Christmas.

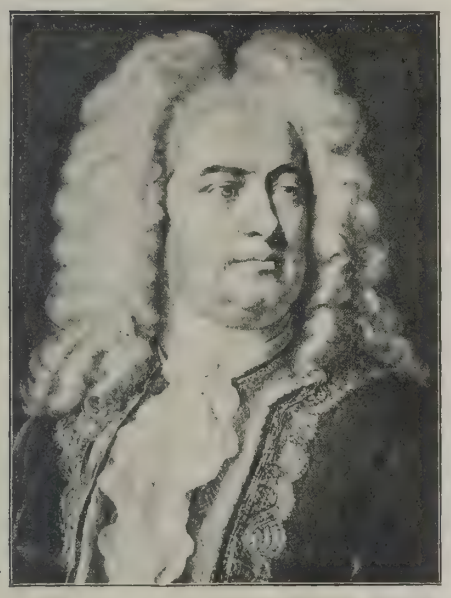
In England carolers, oddly called "waits," are still to be heard ushering in the dawn of Christmas morning — often, too, at midnight. The term comes from the medieval minstrel who was called a "Wait" or "Wayte," from the Norman French *bon gayte*, corrupted from *bon guet* (good watch). His duty it was to keep watch at night with a pipe, hautboy, or similar instrument to sound the hours at regular intervals. The Puritans banished the carol with all other observances of Christmas, — even mince pies lay under the ban; but at the Restoration it came again into favor, somewhat changed in character, however. In accordance with the frivolous taste of the court, it took on a rollicking spirit and had to do more with mirth and feasting than with religion.

The best known and the most popular of English carols is the sturdy *God rest You, Merry Gentlemen*, which still greets the chimes of Christmas all over England, and with which this account may fitly close.

CHRISTMAS MUSIC

KARLETON HACKETT

As Christmas time draws near there is one great landmark in music that comes very close to us. Handel has made Christmastide peculiarly his own, and all over this broad land the Festival of the Holidays is beautified and spiritualized by the strains of the *Messiah*. All our great choral societies will give it entire, the leading churches



G. F. HANDEL

will use selections at their services, and so long have we been accustomed to this that Christmas would hardly seem Christmas without Handel's masterpiece. Every singer with any pretensions has begun the study of this great work, and every young student and every lover of music should know something about it, whether he will ever be able to sing it or not. This should be a part of his general education that he may know the meaning and power of the music and appreciate hearing an artist deliver the lines, for no great art work can be understood, even as a listener, without study. If one is to hear *Hamlet* the book is read and reread; it should be the same with the *Messiah*. All who read *Hamlet* do not expect to play the part on the stage; those who study the *Messiah* may never sing it, but such study should be a part of general education.

✠

Many of the arias are possible only to a well-equipped artist, but there are some which do not make great demands on technical skill, which if studied earnestly and sincerely can be well sung by young singers in small churches and in the homes. The *Pastoral Symphony* can be made very effective on the organ, and the four recitations for soprano immediately following contain one of the loveliest pictures of Christmas in all literature, nor are they beyond the reach of any soprano who has a fair voice and some poetry and feeling in her soul. Feeling here is vastly more important than vocal technique. The *Pastoral Symphony* suggests the quiet of the whole world where the shepherds and their flocks, after the daylight is ended, are gathered together for the night's rest.

✠

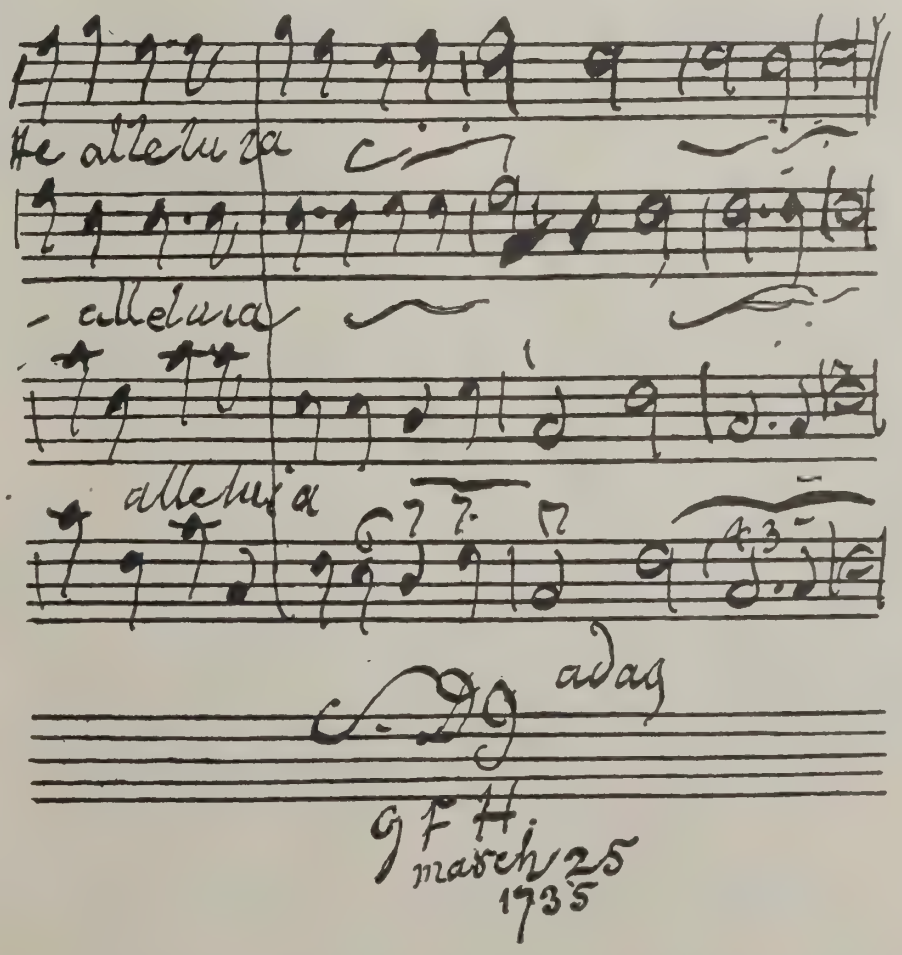
Nothing would be more satisfying after the prayer than this symphony, which would steal quietly into all hearts with its message of peace; then let the soprano sing the words as simply as possible, "There were shepherds abiding in the fields, keeping watch over their flocks by night." There are many changes made in the notes of these recitatives from the printed score, but only a few are essential, and in the first recitative none at all. But if the singer is to make it mean anything, she must read the words over and over, and study the music until she is absolutely permeated with the spirit. Technical skill is necessary, but without imagination to picture the scene so vividly that it appears before the mind as clear cut as though the mortal eye actually saw it again, technique is without value. You must see the low, rolling hills, under the velvet eastern sky, the flocks gathered in the hollow out of the wind, the shepherds sitting apart and higher up that they may oversee their charges, in the warm southern country where it is as pleasant to sleep out of doors as in a house;—when you see this you may be able to make your hearers see it also, as you tell them about it.

✠

Then comes the second recitative, and it must be with something of the awe in the voice that you might feel were you one of the shepherds and saw the heavens open and reveal their wonders. Here again it is not necessary to change a note, but you must put such meaning into each word that every one in the church shall seem to see the Angel of the Lord before him.

✠

The third recitative requires a little more skill in interpretation because there is less help from the music. Study the words, and remember that this is declamation in music, and that the whole meaning depends on your making the words clear. Read them aloud before singing the music, read them as you think a fine speaker would do it to bring out the meaning; then, when what you wish to do is clear in your mind, sing. When you sing "Fear not," sustain the first word and make your tone and the inflection of your voice say "Fear not" as though you meant it. In the music of the words "which shall be to all people," there is a slight change. The first syllable of "people," instead of B, as printed, is sung on E with a long hold. Make your hearers understand that these "good tidings of great joy," are to be for "all people"; make that clear, emphasize the words, until everybody within hearing must understand the force of this message. Begin the next words quietly, so that the closing words, "which is Christ, the Lord," may be given very slowly, with the full power of your voice and such earnestness and conviction of tone as shall make people believe.



Facsimile from MS. of Handel preserved in British Museum. (*Vocal Chorus concluding 4th Organ Concerto.*)

You sing not to display some prettiness of tone, some skill in holding a long note or running a scale, but to make your hearers feel and believe what you say: if you do this, there is the making of an artist in you. The last recitative is the climax, so make us feel that "suddenly there was with the angel a *multitude* of the *Heavenly Host*, praising God, and saying." The words are clear enough to one who can think; make them clear to the unthinking, make them stand out so that none can fail to understand. If you have the tone in your volce, sing the first syllable of "saying" on A; if not, sing it on E, as written, for it really makes little difference if you catch the spirit. Then if the church has a chorus or a fairly good quartet, sing the magnificent chorus, "Glory to God," and there will be a beautiful Christmas service in your church that day.

✠

There is one aria in the *Messiah* so beautiful that all are affected, so simple that all can understand, and easily sung by any alto with even a fairly good voice, — *He shall feed his flock like a Shepherd*. This is one of the best selections for a children's service, as the words use only images which children can grasp, and the melody is so pure that it appeals to them at once. This is one of the arias which give to the greatest artists full scope for all their powers of interpretation, and yet can be well sung by any young alto who knows anything at all about singing. When you sing it, remember that it is in the simplest possible form, and should be sung in the most simple, straightforward manner. No airs, no overloading of the sentiment, no ritardando, no accelerando, but just exactly as it is written. Do not take it too slowly (the eighth note about 144), and above all, remember that it is comforting; make every one feel not merely the beauty of it, but the hope and comfort of the words.

✠

Sometimes this is sung so slowly, so mournfully, that its meaning is entirely destroyed, and instead of a message of cheer and good tidings it makes us think of nothing but sorrow and suffering. There are some changes in the score: "He," the first eighth note, should be tied to the following quarter each time, "shall" coming on the eighth note on B♭. But the main thing is even, sustained tone, never *dramatic* nor declamatory, — just simple pure tone. If you sing the notes in the score just as they are written, with the accent of the rhythm and a cheerful tone quality, you will give a very good interpretation: this aria is so perfect, the words and music are so exquisitely adapted the one for the other, that they need no outside assistance. The only ritardando should be on the last phrase, beginning on "lead," then "those," softly and with a hold, and the last words, "that are with young," quite slowly. But the main point is the spirit. Sing it as simply as you can, without any attempt at ornamentation or effect, in a straightforward, comforting manner, and whether it be in the church, in the Sunday-School, or in your own home, it will make every one feel still more keenly the Christmas spirit.

✠

A CHILDREN'S CAROL

Then a carol for the children. *Sweet Christmas Day* by Caleb Simper has a joyous rhythm and a happy melody, and may be sung either as a part-song, or by the younger children the soprano part may be sung in unison. When children sing, they will depend very largely on the accompaniment; and whether this carol be played on the organ or piano (and it is well adapted for either), be sure that it goes with a swing. Children are naturally very sensitive to rhythm, and even when not musically acute will feel and recognize a strongly marked accent and throw themselves into a song if the player will give them the proper lead. All the way through there must be a strong accent on the first and fourth beats of the measure, and not merely this, but a swing to the whole movement that will set the children marching. The tempo should be rapid enough so that it seems like a somewhat slow march with two beats to the measure. The children cannot give the accent and rhythm for themselves, but they respond quickly if the player brings out the movement plainly. Represent it

to them as a march, make them move in time to the music, and after two or three trials you will find them singing with a spirit and forgetfulness of self that is animating; but it all depends on the player. One who is unsympathetic or unrhythmical will cast such a damper on the whole thing that not half the children will sing, and those who do will be without interest.

✠

Almost anything can be done with children if you can arouse their enthusiasm; they will march with a will, and will sing anything that appeals to their sense of motion. Nothing is more effective than the singing of enthusiastic children, nor much more mournful than when their hearts are not in it. Nothing is desired except movement and spirit; make them feel the meaning and the movement of the song and they will sing it beautifully. If there are older voices, they may sing the other parts, but the choral is perhaps prettiest if sung in unison by the children alone, and with a sympathetic player to accompany them they will do their part with a will, and give the most beautiful character to the Christmas services. Children's voices when they sing with heartiness and confidence are very beautiful and appealing, and to the right person they respond so readily that it is a pleasure to work for them. Give them a chance in the Christmas services and they will make it inspiring.

THE MAKING OF A MUSICAL GENIUS

We have heard so much in recent years of various child prodigies that some of us are becoming somewhat weary of them. To the educationist, however, they provide food for reflection. It is noticeable that most of these so-called prodigies belong to the middle class, and have been surrounded by a musical environment from their earliest infancy. Born of musical parents, the infant had every chance of hearing good music from the cradle upwards. Had he been born in a higher station of life, his only chance of hearing any melody whatever during the first months of his life presupposes the existence of a musical nurse, old-fashioned enough to sing him to sleep. Does one person in a thousand think of training a child's ear from the beginning of life?

"What nonsense," some people will say. Let me give the case of a child in whom I was interested. As an infant she came to me for half an hour every morning, and from the time that she was three weeks old I spent that half hour in playing to her. She used to lie on the floor while I practiced, and from the first she never cried during our musical half hour. As soon as she could sit up, she would sway her little body in time to a tune that she knew and liked; at six months old she could recognize several melodies. At this age she sang her first musical sounds: they were two notes at the interval of a third. At eleven months old she astonished me by singing a phrase from a song of which I had just played over the introduction. I felt convinced that this was a mere coincidence; but after singing several other songs I went back and played the introduction to the first, when Baby sang the phrase as defore. There is no suggestion of it in the introduction, so the melody must have appealed to her; this was the first evidence of musical taste on her part, but at a year old she showed strong likes and dislikes. At this time she was devoted to Heller, and insisted on having every day Mendelssohn's *Lied ohne Worte*, No. 10, in B minor, at which she always laughed delightedly.

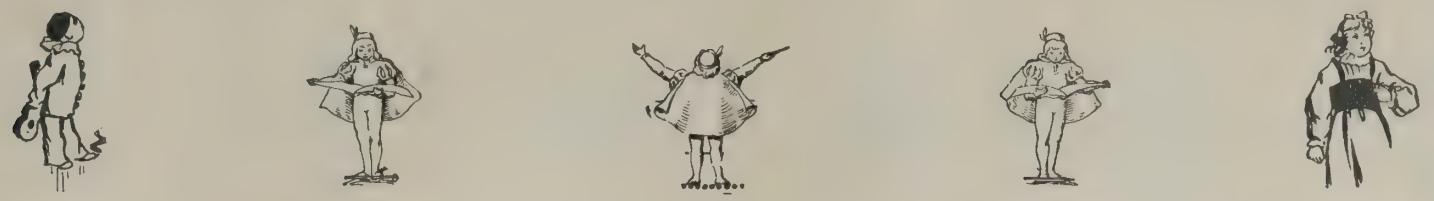
One of the first words she could say was "pian'," and before her first birthday she surprised every one by seizing on a page of music out of *Little Folks*, and shouting gleefully, "Pian', Pian'." A pile of old magazines was produced, and Baby found the music in each one, triumphantly announcing her discovery.

At twenty-two months she could sing fifteen songs, starting them at once as one asked for them, and keeping in perfect time and tune. She would only sing them unaccompanied, however, and would stop at once if I touched the piano. Of course, I need hardly add that she was never taught any of them; she chose these out of at least twice as many more which she heard frequently. Besides, she used to hear her brother and sister singing their school songs, and would catch up phrases of these.

I now began to play to her more frequently. She identified me with the instrument, and used to cry out "Pian', Pian'," whenever she saw me. It was impossible to weary her. One Sunday afternoon she came to me the moment lunch was over, and I played to her for nearly three hours. She sat on a chair by the piano, occasionally volunteering the remark, "Dat be welly jolly," or asking, "What dat called," but never attempting to move from her seat.

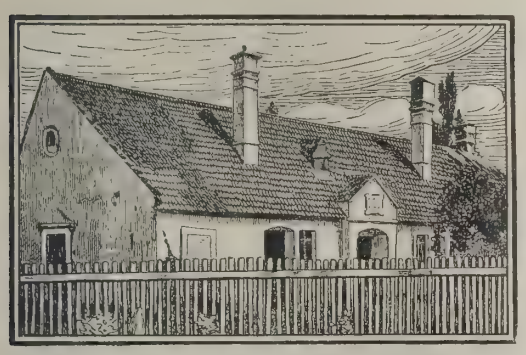
About this time the *Glory Song* was first heard of, and I had a copy sent to me. Baby was sitting by the piano as usual, and I had not sung through the first verse when she interrupted me, saying disgustedly, "Baby not like." She had never interrupted me before, and at first I took no notice, but went on singing, for I was curious as to the reason of the song's great popularity; Baby accordingly got down from her chair, and threw herself face downwards on the floor, repeating, "Baby not like."

At two years old she recognized any of Beethoven's Sonatas, and strangely enough knew their position and



the look of them in the book. I discovered this one day as I opened the volume before beginning to play; I was turning over the leaves, and Baby said excitedly, "Dat *Moonlight Sonata*." Thereupon I asked her to find various sonatas in the book, and she did so correctly every time, much to my surprise. One day, when I was playing to her the aforementioned *Lied* of Mendelssohn's, Baby said as I was playing bars 67–73, "It's like the *Pastorale*." I stopped, and turned to the Andante movement of the pastorale, and was myself struck by the resemblance in bars 75–78.

As a young baby she disliked the sound of the violin, as played by a school-girl sister, and would cry if forced to remain in the same room. When she was a year and three-quarters, one of the children had given to him a humming-top. The chord was not quite in tune, and Baby set up a howl directly she heard it. For three months she kept up this distaste for the wretched toy, never willingly staying in the room when it was being used. At the end of that time the top was superseded by some other toy, and Baby was left at peace. She grew to like the violin, and would stay in the room to hear it practiced. One day she held up her finger and said, "Stop, Zamsie's playing Grieg." The door was shut and I was playing in a room upstairs with the door shut also, but her ear was sharp enough to distinguish the sounds. Marvelously enough, she had heard the *Volkslied* which I was playing only three times.



FRANZ LISZT'S BIRTHPLACE AT RAIDING

She seemed to get hold of the composers' names, and to recognize their styles. One day her father was humming the Soldiers' Chorus from *Faust*, and half in fun he said to her, "Oh, you are very clever, no doubt, but you don't know what that is."

"Course I do."

"Well, what is it then?"

"Dat Gounod."

How she knew passes my comprehension, for she had never, to my knowledge, been told.

I have not seen her since she was two and a quarter; she is now three. I hear that she has not forgotten any of her songs, and that she often asks for me. For three months she heard very little music, but on being taken to hear a pianist, she remarked to her mother, "Dat's something like Zamsie used to play." Her mother writes to me, "She pines for Beethoven, and things like that."

That this child has every likelihood of proving to be a musical genius I think few would be found to doubt. She is otherwise a normal specimen of humanity; perfectly healthy, full of life and spirits, with a decided character.

It would be interesting to know how far her early training has been instrumental in developing the child's natural genius.— LILIAN FAIRBROTHER RAMSEY in the *Musical Herald*.

TEACHING CHILDREN THE DIGNITY OF DETAIL

THEODORE STEARNS

The instinct of all childhood is for matters small and easily within its grasp. A puppy, a kitten, a doll, a wee flower, easily and effectively excites the interest and admiration of nearly all children, for the subtle, co-relative gathering of little things is as plainly marked in the young as it is in nature.

To apply this principle and utilize it in teaching offers almost boundless opportunities for success; it may be even safely assumed that it is the one principle that wins with children, especially in music, where the wealth of detail is so profuse and yet so plain when carefully sifted out, arranged, and placed before the eye and mind with earnest and intelligent effort.

The first five tones of the scale of C, written in whole notes, may contain a world of meaning if their various attributes and association one with another are clearly expounded, and the simplicity of a "first waltz" or "exercise" that has long since passed beyond the wonder of the teacher may be given a grown-up dignity and fresh interest to that wide-awake brain and impatient little fingers which so longingly scans the mysteries of staff and notation and mutely plead to be released into swift technique and sweet song. A child will seek the pebbles in the brook flowing at his feet long before he fully appreciates the majesty of the distant mountain, and he is easily content to play with the first ere the importance of the second impels his attention. I sometimes think the first lesson should be given on a slip of paper, lest the magnitude of a whole printed page distract the roving eye and appal the budding understanding of the youngster who, perchance, has just dropped a tiny forget-me-not wrapped in moist handkerchief to climb upon the revolving stool of learning and look with apprehension at the long keyboard.

The First Detail

I have yet to meet the very young pupil who did not, at first, gingerly handle his first violin or sit up to the piano with shyness and doubt. They can be easily frightened and embarrassed at the outset and anxiously cast about for some one thing—some tiny rock or anchor which they can instantly understand and to which they can cling and preserve that sensitive dignity which is so near the surface and so imperative to the majority of children.

Even as a large audience must first be centred on one point of common interest from which its attention is gradually led out into more diffuse and complex paths of entertainment, so must this first lesson given to a child be based upon some small detail, one easily grasped and understood, and thence the skilful instructor will lead gradually to two or three other items of interest as quickly as possible, for childhood will not brook delay until the half hour is safely passed and the pupil finds that, because he has not been asked to look at the mountain, he has been playing with the pebbles without once being fearful of falling into the stream.

Treating the material used as a matter of course will often put the children at their ease, and to use a conversational tone is all-important. Too many teachers treat a child as a child, when meeting him on the common ground of dignity would raise him in his own estimation and, once for all, make him feel that in this task his abilities to learn are rightly appreciated.

In seeking to get work or the best that is in them out of ignorant people one raises them to one's level by being shrewd enough to descend apparently to theirs. Thus the most powerful and popular statesmen or other public men are those who talk plainly and use homely texts when addressing common throngs. It is exactly so with children. If one is grandiose about the mountain, the child gazes helplessly at the pebbles and is bewildered. His instinct tells him that he is being imposed upon, yet he condemns his inability to understand and blames himself. Soon he grows indifferent, with that heedlessness of childhood which is the hardest characteristic for a teacher to dispel or penetrate.

Have you ever noticed how freely children walk and play? Have you, unobserved, listened to their talk, arguments, disputes among themselves? They have their own dignity of resentment and appreciation, sometimes grotesque, just as you and I have our values and ideas, and any success with them must first show them that you fully know and respect their small instincts and strength.

FRANZ LISZT AS A YOUNG MAN

Dignified Friendliness

Like taking up a brick sidewalk, the rest is easy once the first brick is removed. The first detail, such as, possibly, the correct position of the thumb and the reason therefor, has won a fleeting interest, and the slow, careful playing of the five-finger exercise, C, D, E, F, G, has been a triumph. This much of the lesson can be made to appear foolish or dignified. Foolish, if the teacher pronounces it ridiculously easy; important, if he impress upon the younger mind the beauty in being exact or perfect in some one thing. I believe that nine failures out of every ten depend upon the impressions formed at the first lesson.

The child can, like household pets, instantly distrust or trust, though this may not be always the case. Be very sure that you, as well as the lesson itself, are being covertly studied. With his limited deductive ability the pupil will gauge you, try you, "size you up," and adjust himself to your betrayed characteristics and propensities. Later on he will copy your mannerisms to a great extent and the little details will be grasped first. If you talk comfortably and pleasantly the lesson will be pleasant. If you resort to undignified severity or use of big words and ultratechnical terms, the lesson will be a vexation and a puzzle. If you can discover, either before or during the first lesson, what the child's everyday ambitions and pleasures are, you may count that detail with a golden numeral, for any interest by a grown man or woman in a child's pleasure wins that child for a friend, and a lasting one. Who in this world can work to better advantage together than friends?

Besides that, there is often a way of applying the principles of playtime directly to some part of a music lesson. One pupil was an avowed worshiper of base ball, but could not get the idea of drawing his violin bow straight. "What," said his teacher. "If you wanted to put a man out on first base would you throw the ball straight or would you lose time trying to curve it?"

To a little girl who loves to cook and set table, but who constantly allowed her hands and wrists to drop below the level of the keyboard, a teacher suggested: "Do you hold your hand that way when you put a cup and saucer on the table?"

JOHANNES BRAHMS IN HIS BOYHOOD

One of my boys persisted in playing piano with the whole arm instead of his fingers alone. When he played a note, floppety-flop would go his arm, finger, wrist, and all. The other day he was telling me how nicely he put down his mother's hall carpet.

"Did you use a sledge hammer?" I asked.

"What?" he laughed. "To drive tacks with?"

"Well," said I, "what is the use in your using your whole arm to drive down the piano key when a single finger will do it?"

On the other hand, some children cannot be treated as equals. Like the confirmed spendthrift they will not stand prosperity, and too much friendliness results in a species of contempt for the authority and discipline which must remain the teacher's first and best stock-in-trade. Happily, acute cases like these are rare, and in general may be overcome by skilful leading rather than by driving.

Training the Details

As water seeks its level, so will the association of teacher and pupil gradually adjust itself; the routine of lesson giving and lesson receiving becomes either a systematic mutual pleasure or an erratic scheme of troubled progress, for, once started, children continue to learn as long as they are taught, though the results may be like Joseph's coat, of many patches and colors.

As in the beginning they could grasp the details nearest their fancy, so now they look to their instructor for that vigilance which guided them safely over the brook that threatened to destroy their interest. Up to the time of so-called "graduation" in music the pupil leans on the word of the teacher, and this confidence depends solely on the persistency with which the dignity and importance of small things has been kept up. No doubt all teachers have been careful and painstaking enough at first. As a rule this is imperative, since a child, like a chicken, can assimilate only a little successfully. A hundred minor strands have been examined. It remains now to gather these together into a homogeneous whole and bind them into a perfect chord of uniform strength and usefulness.

No one ever lived long enough to profit by all their mistakes, and ever since the world began Experience has been the hardest teacher. Many old pupils are constantly facing troubles in their advanced technique that might be traced back to the first lessons where the supreme dignity of some certain detail was insufficiently learned, or understood, and, very correctly too, the teacher received the blame. To tell a pupil a thing once only is never sufficient. True, it may not be necessary to pound a fact with sledge hammer blows over and over again; but it is essential to refer often to all details, sometimes by a mere word, again by a fresh explanation, enhanced with a new simile to give it the contrast of novelty, in order to draw the strands into the gradually increasing perfect result. Beethoven believed in allowing a pupil to finish a piece before criticizing, yet that did not deter him from crying "staccato" to a pupil whose technique already was almost blameless.

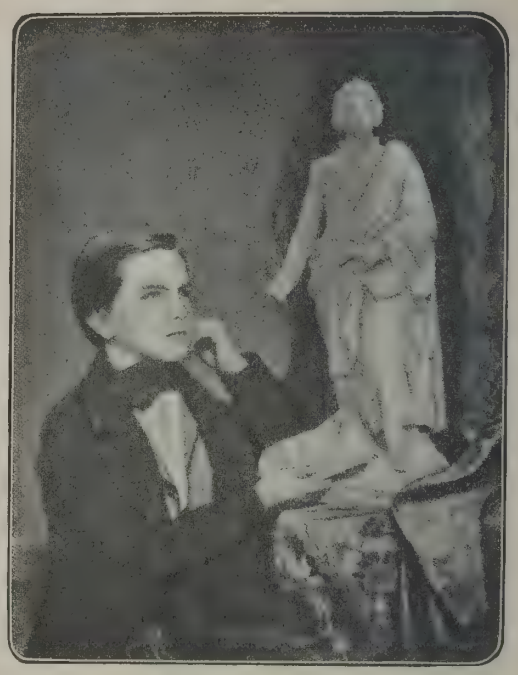
Real training consists in ever watching details that long since have been correctly understood, and what is expected of us to-day is expert detail, whether we be virtuoso or ditch digger.

Merely telling a child that details are necessary is, of course, unsatisfactory, unless you show him that this is so. And here, again, the dignity of small things is powerful, for above all else, children desire and understand a proof of anything. This is the inborn instinct of all creation, to see and be near perfection. To tell a pupil his lesson is well played is gratifying to him, but to explain why he has improved is infinitely better. Thus, when he plays a passage with proper attention to its staccato and legato phrases, turn back to a distant previous lesson and recall how he labored over that one point, which he now successfully performs.

When pupils play a scale smoothly, show them how it is the result of those far-away five-finger exercises, which once meant so much to each individual finger. Encouragements such as these are of decided benefit, but care is taken not to make them flattering, lest the naturally ambitious instincts become over bold.

A powerful argument for the constancy to detail is a clear explanation of the fact that all music is fleeting. We are judged by our first performance of any given piece. A painter, a sculptor, a novelist, may produce a work, which, if not liked by the public at first, can be reviewed or reread until its beauties are clearly recognized. With the playing of a piece of music, however, the whole effect, the best in one's self must be given completely and perfectly, for with the sounding of the last chord we must stand or fall by the few moments we have held the interest of our hearers. In order to do this successfully, strict attention must have been paid to all the little points, and if we have not the habit of being careful, how can we expect to do the best every time?

"How strange it would be," once said a little pupil as she entered my studio with a bouquet of May flowers, "if half the fields were dead." We talked about details that day perfectly, for a score of them lay on the table, mute examples of the principle, and sweetening the air with their fragrance. She played her scale splendidly, by the way. It was the C♯ minor.

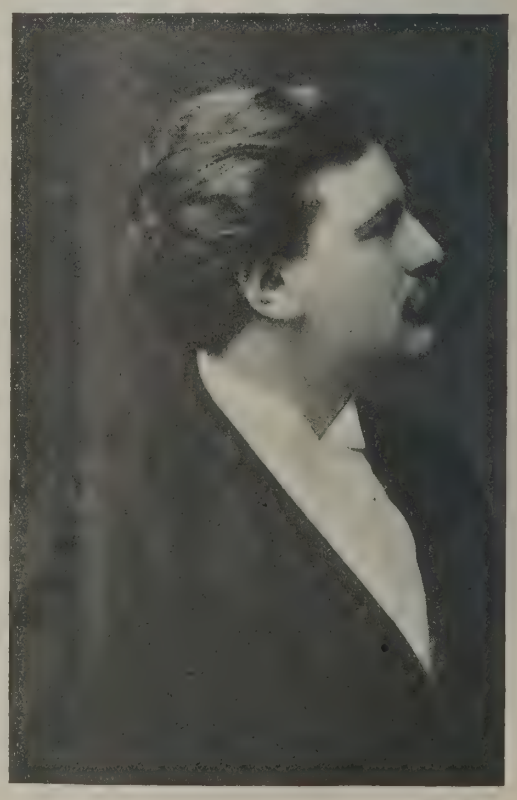


JOSEPH RHEINBERGER AT FOURTEEN

CONCISE RULES

Every intelligent and upright man regulates his conduct by fixed principles and established methods. He is not the creature of impulse or caprice.

1. He is strict in keeping his engagements.
2. He does nothing carelessly or hurriedly.
3. He does not entrust to others what he can easily do himself.
4. He does not leave undone what should and can be done.



MORITZ ROSENTHAL
(Now in America)

BRAHMS' BIRTHPLACE

CAROLINE V. KERR

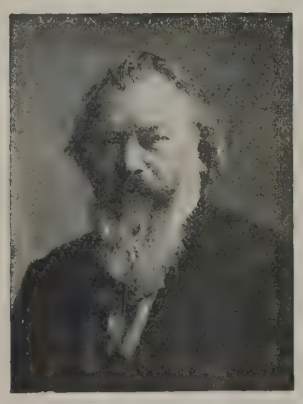
The tourist in Hamburg, who is dependent upon his *Baedeker* as a fingerpost to the many interesting sights which the quaint old Hansa town affords, will be directed to the Museum, the City Hall, the botanical gardens, the harbors and quays, or the beautiful Alster basin, its surface dotted with pleasure craft of all kinds, and whitened with the plumage of the swans which play as prominent a rôle in Hamburg as do the doves at St. Mark's in Venice.

All of these and much more will be pointed out to the stranger within the gate, but by far the most interesting quarter of Hamburg is rarely approached by the regiment of the red book.

One has only to turn the corner which leads from the Alster Promenade, out by the old Gänsemarkt, to find himself suddenly in the heart of seventeenth-century Hamburg, walking over the cobbled pavements of the queer, crooked old streets, where, with outstretched arms, one could nearly touch, on either side, the rows of quaint, gabled houses, with their myriad-paned windows.

Through these windows one catches tantalizing glimpses of old pewter and porcelain, and the soul of the relic hunter is alive with visions of curious treasures which might be picked up in these old houses.

But a far more fascinating leaf of ancient history than the one that spells "pewter and porcelain" is that from Kalbeck's delightful biography,



JOHANNES BRAHMS

which locates the birthplace of Brahms somewhere in this labyrinthine maze of narrow alleys and lanes. After aimless wanderings through the Bäckerbreitergang, the earlier home of Father Brahms, where the fascinating old houses lean forward as if to make gossiping easy for the good *Hansfrau* in her window with her neighbor across the street — one arrives at the *Speckgang*, off of which lies Schluters Court and the Brahms house.

The entrance to this court is through a passageway between two houses, barely wide enough to admit of an Indian file entrance, and sets one to wondering how Johann Jacob, the father of our Brahms, managed to wedge himself and his beloved contra-bass, through the narrow opening.

The place dignified by the name of Schluters Court is a small enclosure not more than twenty feet square, and this so filled with old casks, ash-barrels, sheds, and the family washing, that two feet of perspective only is granted for a view of the Brahms house.

To reach the Brahms apartments one stumbles up a flight of stairs, which in breadth and steepness resembles nothing so much as a hen-house

BRAHMS' BIRTHPLACE

ladder. The door to the left of the landing leads into a smoke-stained kitchen, with a tiny hearth which would have done noble service in a child's playhouse, but which must have offered poor encouragement to children of larger growth. A living room measuring seven feet from the uneven floor to the cracked ceiling, and a little alcove, complete the apartment. Here were housed father and mother Brahms, and two children, and here, May 7, 1833, was born the great tone master, who proved himself worthy of forming one of the immortal trio of B's.

The view from the two windows consists of the edifying spectacle of the neighbors' back yards, with their accumulation of rubbish and unsavory odors, surely many times multiplied in those early days of the past century, when health and police regulations were not so highly developed a factor in German civilization.

The sun is never very generous with his light in Hamburg, and but few of his beams could have penetrated into the foggy, smoky atmosphere of this dark little corner. Small wonder that the child Johann preferred to escape from these

(Brahms at Leisure)

unfriendly surroundings and slip off down to the harbor, there to feed his lively fantasy on the cosmopolitan craft for which the Hamburg port offered so splendid a market — or, together with his schoolfellows, to visit the enticing street fairs where, on one occasion, an itinerary phrenologist made the prophetic assertion, "You have a remarkable head! There is something unusual about you and you will be a great reformer."

This prophecy has been fulfilled, and the musical world of two continents has long since acknowledged its debt of gratitude to the "reformer."

But in the "prophet's own country" recognition has come more slowly, and it is only recently (seventy-three years after his birth and nine years after his death) that the civic authorities of Hamburg have placed a memorial tablet upon the humble house in Schluters Court, made illustrious for all coming generations of musicians as the birthplace of Johannes Brahms.

SIMPLE RULES

The careful man:

1. Is prompt and decisive in his dealings.

2. Is clear and explicit in his bargains.

3. He does not leave to memory what should be in writing.

4. He does not allow his desk to be littered, but keeps it tidy and well arranged.

5. Aims to keep everything in its proper place.

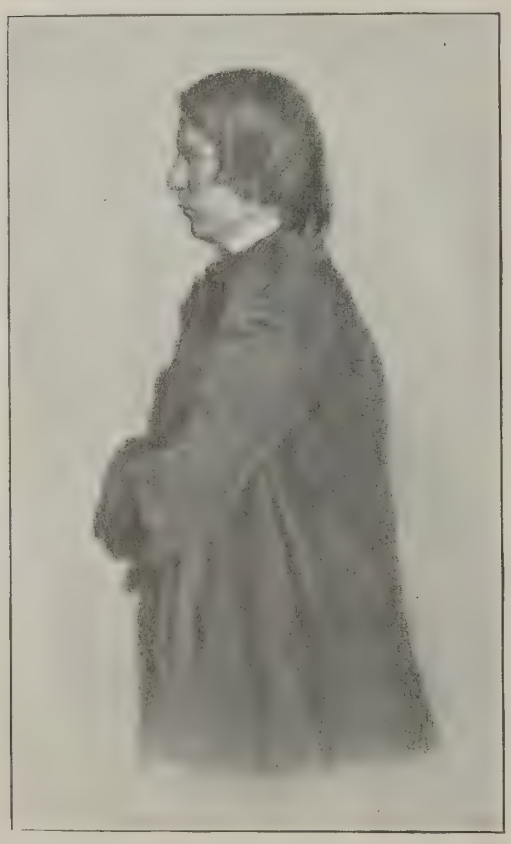
6. Keeps the detail of business well in hand and under his own eye.

7. Often examines his books and knows how he stands. — *Business World.*

SCHUMANN'S "ALBUM FOR THE YOUNG," OP. 68

PERCY GOETSCHIUS, MUS. DOC.

This delightful and valuable collection of short pianoforte pieces, in which Schumann manifests his sympathy with child life, and his appreciation of its significant influence, was written in the two weeks from August 30 to September 14 in the year 1848. Its original title was *Christmas-Album for Children who love to play the Piano*, forty-two pieces. When first published, it was called 40 *Piano Pieces for the Young* (Op. 68). In reality there are forty-three separate numbers in the collection, which, in publishers' catalogs, generally bears the title "Jugend-Album" (album for the young).



ROBERT SCHUMANN

Schumann's attitude towards the work, and the incentives to its creation, are reflected in a letter which he wrote to Carl Reinecke (still living, in Leipsic) shortly after its publication, and which runs thus: " . . . my youngest 'children' also, forwarded day before yesterday, bespeak your sympathy. It is true that one always loves the youngest most; but these have grown singularly dear to me, as they have really grown right out of the life of the family. For the first pieces in the Album were written for the birthday of our eldest child, and so one piece after another was added. I felt as if I were beginning to compose all over again. You will also find traces here and there of the old sense of humor. They are totally different from the *Kinderscenen* (Op. 15). These latter are retrospective moods of an older person, and are intended *for the grown-up;* whereas the Christmas-album (Op. 68) contains more prospective moods, presentiments of future conditions, *for the young*."

This points clearly enough to the author's personal impression and intention. But it is nevertheless true that a number (and no small number) of these pieces lie decidedly beyond the range of ordinary childhood experience, and, both in musical contents and technical difficulty, demand the capacity of grown-up children. At the same time, so many of its pages are of the grade of simplicity necessary and convenient for the ordinary child, that this collection must be regarded as a great boon, by teacher and pupil, particularly to be prized for its musical purity and genuine beauty.

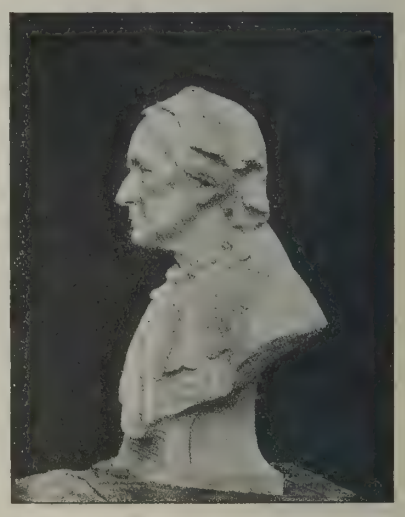
The very best company is just good enough for the learning child; no teacher, no instrument, no class of music is too good for him because he is "too young." It may be, for the time, beyond his full comprehension; it may be too "deep," but it cannot be too "good" for him. The purest and best will draw him upward; will feed his enthusiasm; and will lead him to discover, by natural sympathy, the best that is within himself. And no other quality than the purest and best will do this. Therefore teachers should search the pages of the Masters most diligently for such of their treasures as may prove to be accessible to the young student; and should always give the preference to such teaching material. Of this kind are the *Songs without Words* of Mendelssohn; the Album of six pieces (Op. 72) of the same master; the two-voice *Inventions*, *Little Preludes*, and many other easy pieces of Bach; the *Bagatelles* (Op. 33) of Beethoven, —and this *Album for the Young* of Schumann.

Another part of the teacher's duty toward the pupil is his induction into the spirit of the composer, by such wise and gentle explanation of the history, the character, and especially the general structural details of the music as will stimulate his interest and his power of independent observation and apprehension, and will place him in a certain personal relation to the master and his work.

This Album of Schumann exhibits enough curious traits (of a purely technical nature) to supply the young pupil with a rich source of suggestion and interest, sufficient to attract and hold his attention until he has learned to play the pieces well. To these I shall refer in a general way, leaving it to the teacher to use what he may deem useful.

The form, or structural design, is singularly simple and regular; the division into phrases, of the usual four-measure length, is everywhere apparent, almost without exception, and with but rare extensions; in other words, the cadences are distinct, and recur with almost unfailing regularity in each succeeding fourth (or second) measure. The most striking deviation is seen in No. 31, —the *War Song*, —which is irregular throughout.

The design employed for nearly every number is that known as the Three-Part Song-form, — a design of which each Part is usually a period (double-phrase) or some similar form, and in which Part Three is practically a recurrence of Part One. The pupil will take keen interest in hunting for the "return to the beginning." In many cases the design is enlarged by repetition of the Parts. This form is distinctly exhibited in No. 9, — the *Little Folk-song*. In No. 4, No. 7, and a few others the form is only Two-part; that is, the recurrence of Part One is wanting.

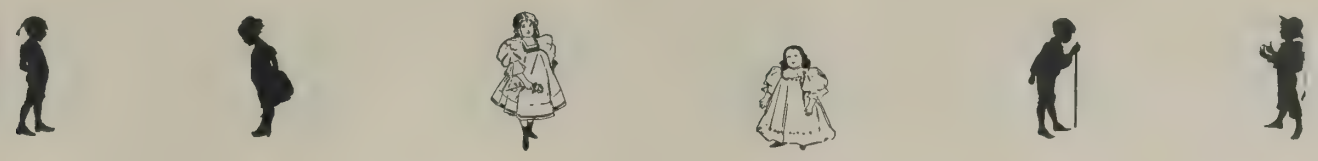


CLARA SCHUMANN

A noteworthy feature of the whole collection is the prevalence of duple measure; for one third of the pieces Schumann has chosen 2–4 measure, for more than another third he uses 4–4 measure, and the rest are in that kind of 6–8 measure which represents two triplets, or practically 2–4 measure. There is no 3–4; and a genuine triple-rhythm effect is apparent, if anywhere, only in Nos. 15 and 22, where the tempo is so moderate as to admit of six independent beats instead of two triplet beats.

Another somewhat curious trait is the preponderance of the "sharp" keys; A major, and its parallel, A minor, are represented fifteen times; E major three times, E minor once; G major three times, G minor twice; C major six times, C minor twice; D major once. Of the "flat" keys, F major occurs six times, and E♭ major once.

As Schumann intimates, in the letter quoted, the first few numbers are very simple; nothing could be more so than No. 1 (*Melody*), No. 3 (*Crooning Song*), and No. 5 (*Little Piece*); simple



enough are also No. 2 (*Soldiers' March*), and No. 4 (*A Chorale*). This same chorale appears again later, — as No. 42, — with somewhat elaborate figuration. No. 6 (*Poor Orphan*) touches a deeper vein, and No. 9 (*Little Folk-song*) is still more serious, though the childish laugh rings through its second section; but between these come those delightfully ingenuous favorites of all children, young and old, No. 7 (*Little Hunting Song*) and No. 8 (*Wild Rider*); and precisely the same mood animates No. 10 (*Happy Farmer*, "returning from his work"), probably the prime favorite of the entire collection. No. 11 (*Sicilian*) has a quaint ending, on the dominant chord, which leaves it in an unfinished, questioning mood. No. 12 (*Knecht Ruprecht*) is the only direct allusion to Christmastide; this good-natured, noisy fellow, in the train of Santa Claus, dispenses good gifts to good children. No. 13

("May, dear May — thou shalt soon again be here") passes suddenly into the balmy atmosphere of spring, which caresses us again, somewhat more seriously, in No. 15 (*Song of Spring*). Between these stands the *Little Study*, No. 14, in which the author returns to the nursery, — as again in No. 16 (*The First Loss*), and in No. 17 (*Little Morning Wanderer* — "little early bird," who probably does not understand all that he finds). Then comes an allusion to the autumn season. No. 18 (*Mower's Ditty*); and another, again, in No. 24 (*Little Harvest Song*), and in No. 33 ("vintage time — joyous time"). The winter season is reflected in Nos. 38 and 39, both of which are called simply *Winter Time*. No. 19 is a *Little Romanza*, No. 20 a *Rural* (or Rustic) *Song*. No. 21 has no title but the three asterisks ***, whose meaning probably no one now knows; the same vagueness recurs in No. 26 and in No. 30; all are singularly serious, and very characteristic of Schumann, who may have been indulging some secret personal mood. No. 22 is called a *Round*, though it has almost none of the technical traits of musical structure inherent in the "Round canon." On the other hand, No. 27 is exactly what it is called, a *Little Canonic Song*, — in which the uppermost voice and an inner voice sing the same melody, one measure apart. This scholastic vein is resumed in No. 40, which is a *Prelude* and *Little Fugue*, — all for grown-up children, though not very difficult. No. 23 is a *Cavalry Piece*, No. 31 a *War Song*. No. 25 is *Recollections of the Theatre*, of such an innocent nature as the child might recall; No. 32 (*Sheherezade*) and No. 35 (*Mignon*) are similar allusions to the realm of imagination, — the former to the *Arabian Nights' Tales*, and the latter to Goethe's *Wilhelm Meister*. Somewhat akin to these are the *Strange Man* (No. 29), and the Knecht Ruprecht, already cited. No. 28 (*In Memoriam*, "Nov. 4, 1847") is a simple and very beautiful tribute to Mendelssohn; the melodic coincidence between the first phrase of this and of No. 26 (without title) will be discovered by the attentive observer. Another tribute, to a living friend, is No. 41 (*Northern Song*, "greeting to G."), — to Niels Gade, the four letters of whose name (g, a, d, e,) constitute the four melody tones of the first measure. No. 34 is called simply a *Theme*. Schumann seems to have been at a loss, himself, for a more definite title, — and no one but Schumann could ever have written it. No. 36 is an *Italian Sailors' Song*, and No. 37 another *Sailors' Song* from another quarter of the globe. The whole collection ends (No. 43), like the year, with a *Sylvester Song;* it exhibits, in its first melody notes, an interesting similarity to the beginning of No. 27 and No. 22.

I have purposely touched upon each single number, not only in order to translate its title, but because each number is worthy of special mention, and a more or less precious gem by itself.

MUSIC AS A COMMUNITY ASSET

THOMAS TAPPER

It is a good sign of our times, a sign of our dawning comprehension of relative values, that we are beginning to consider school music aside from its schoolroom application. Years enough have been spent in defining the place of music in the curriculum, in devoting energy to the lesser questions of its technical presentation; we may now be permitted to turn our attention to the larger application of music in its relation to the community. Technics and methods will work out their own salvation while we are giving the subject not merely its distinct place in school, but the distinguished place it deserves in city and town life.

In nearly every community there are watchful men anxious to find the school graduate whose mental equipment seems to promise value when applied to the demands of commercial activities. This watchful individual appropriates the graduate and proceeds to turn him into distinct service; sometimes this service permits personal development and the unfolding of special gifts; more often it becomes service of the cogwheel order. But in either case, the application of the graduate to a place in life is of great purpose, for it places another individual in working line, makes him a self-supporting citizen, and connects him intimately with the affairs of his times. In brief, it sets him on his own feet.

But this is not enough. A nation depends not only upon commercial activities for its full development, but upon multitudinous lines of social development, and it seems to me that the question we are now facing is, How far are we able in school years to prepare our graduates for social activity, how may we quicken their attainments that they may possess personal value in fulfilling the varied demands of their time and locality?

Here and there throughout the United States it has dawned upon thoughtful men and women that the child who devotes fifteen minutes daily to music in the schools is in the course of the primary and grammar grades placing at interest an investment of many hundreds of hours, many hours more than falls to the lot of many a well-equipped amateur. And while the two cases represent many incongruous elements defying comparison, the suggestion naturally comes forth whether or not this expenditure of time does not stand for a value beyond the mere schoolroom use of it. We are beginning to inquire whether this investment may not be so placed and so guarded as to pay a dividend throughout life, a dividend of great social value, instead of remaining merely a more or less pleasurable experience during certain hours of school life alone.

In some cities the child and his fellow-citizens have been shown that school music training has a larger meaning. Recently in Cincinnati, and in Worcester, Mass., the directors of music have given the children a place upon the program of two of the most noted festivals that are held in the United States. I was privileged to speak to the children of one of these choruses, and it pleased me to point out to them the great significance of their participation in the festival, and I endeavored to show them that this single instance of the application of their knowledge of music to the community interest is one that may take place not only once, but always.

The oft-discussed question as to whether America will ever become a music nation finds its solution in what we do with singing children. European nations have risen to their present plane of music development through the domestic practice of music. What Johann Sebastian Bach said of his family of children, every community should be able to say of its citizens; namely, that being gathered together, they can give an interesting concert by themselves. In American music festival undertakings, it is not the orchestra that is engaged for the occasion, nor the soloist who flits in, a modern troubadour working on an express schedule, that builds up the music atmosphere of a community. They lend much that is indispensable, but it is the singing citizen, young and old, who is left on the stage when orchestra and soloist are gone who remains the constant factor to be cherished and to be further developed.

In writing upon this subject I have frequently referred to the attention paid to the drama by the peasant people of Ober-Ammergau. Their decennial representation of the Passion Play is not a single distinct effort, but it is an artistic product resulting from the continuous study, in their town theatre, of the works of the great dramatists; consequently, the children of the town are led, as their natural fitness permits, into the study and observation of dramatic work. It is not to be wondered at, with its constant practice, and with its faithful devotion to histrionic art, that this Bavarian village is able to attract auditors and spectators from all parts of the civilized world.

This single illustration points out to us that the moment the fact becomes fixed in the mind, even of one man, that a community possesses an artistic possibility which may be applied in a broad communistic sense, the thing begins to shape itself.

With us, therefore, the beginning of our national music depends purely upon the presence in every community of a man who realizes that there is latent capability in the people, and who, further, realizes that the development of this capability must begin in years of childhood, and be continued in years of manhood.

The people's singing classes, as originated and developed by Dr. Frank Damrosch, are an absolute necessity to every city, town, and hamlet. The far-seeing man who can gather together the children and citizens of a locality, and teach them by patient practice to study and to perform beautifully a great masterpiece of music, has become, to say the least, as valuable to his fellow man as the selectman or overseer of the poor.

Music in school has, therefore, a broader meaning for us. It is more than mere material for schoolroom practice. It is a possession, the national value of which is yet to be known. In school years music should provide the child with three things — mastery of the written language, responsiveness to its meaning, and an increased desire and capacity to interpret the great master works. Music literature is a domain the extent of whose beauty is not even dimly realized by one who has not the open sesame to the domain. This open sesame is personal power to interpret music with the score in hand. The child must attain this power in early life, and on the day he leaves school the golden thread of his interest must not be snapped, but it must be knotted the more firmly by some one who will continue to keep the child a singing citizen.

In no small degree is it interesting to note how quickly a community becomes distinctive, and incidentally, well known, the moment one arises in it who believes in its inherent art capacity, and begins to make good his faith in works. Of untold value are such activities as those of Dr. Frank Damrosch of New York, of Dr. Dann of Ithaca, of Mr. Aiken of Cincinnati, of Mr. Rice of Worcester, of Mr. Shepard of Orange, N. J., and many others well deserving mention here, who conceive that a community will become musical in proportion as its singing love for music is fostered and developed. As to the value of this activity, and of its contribution to community life, no word of argument is necessary. The devotion of thought and of time on the part of those members of a community who participate in the production of a masterpiece like *The Messiah*, the mental training they receive, the heart warming that arises in them at knowing more intimately the great composer's thought — all these experiences are units of great value, a value we are unable to state in concrete terms. The experience they receive makes for the higher social life, for purer thought, for devotion to affairs not exclusively commercial, consequently, for the idealization of social conditions, and for an increase of the individual.

Few educational activities make more directly for the higher social life than music if it be carried over into the doings of after-school life. To develop the artistic effort latent in the People's Choral Union idea not only serves to distinguish the singer, but it brings a distinguished pleasure to all the people of the community. The Choral Union finds its reservoir of supply in the mighty stream of children which like a river flows into life between the walls of our schoolrooms. It is to them that power and right conception must be early imparted, and it must be imparted to them in the faith we have in the greater application. These early years must not be squandered in indecision, nor spent in striving to encourage worship at altars erected to false gods.

May we be forever awake to the evil of idleness, untruth, and insincerity of purpose in our school music; and may we be forever aware of the great significance of all small beginnings.—*Journal of Education.*

The plans of the Oratorio Society, conducted by Dr. Frank Damrosch, include the giving of four concerts during the coming winter. Two of these concerts will be devoted to works that are novel to New York. The first one of these will be Gabriel Pierne's *La Croisade des Enfants*, which will be performed on December 4. The other novelty will be Elgar's *The Kingdom*. This work is a continuation of Elgar's *The Apostles*. Dr. Damrosch has arranged it so that *The Apostles* will be given performance on March 19, and that one week afterward, March 26, *The Kingdom* will be given. The remaining concert of the Oratorio Society will be given December 26, and will be devoted, as usual, to the annual custom of performing *The Messiah*.

INFORMATION WANTED

Editor of THE MUSICIAN

Dear Sir: — I have found a new way of producing harmonic notes on the violin hereto unheard of. I've seen special methods for harmonic notes and pieces of violin music by the best violinists of to-day and have not met a place where these harmonics are yet known to the musical world. Would like to get your advice how I could let these harmonic notes be known to the musical world and how I could get and keep the credit of having discovered these new notes. An answer would be welcome, oblige yours truly,

A. J. G.

THE STORY OF RONDO AND ANGELA

MARY ESTHER SPARKS

[This original and entertaining story was presented by a pupil of Miss Katherine V. Dickinson, of Alton, Ill. The text should be read aloud by one pupil and the compositions performed by others, thus forming an attractive and varied program, in which many may participate. — EDITOR.]

PART I

No. 1

In the olden time of princesses and fairies, when wishes came true, and all adventures ended well, in a great castle over the hill dwelt the lad Rondo. A lonely little fellow he was, but sometimes the village children from the mountains near by would come to play with him. Then the grim old battlements would ring with merry shouts of laughter, and all would go singing and dancing over the smooth green lawns, to a gay little tune that sounded like this trio. *Valse*, Op. 100, Streabbog, No. 2.

No. 2

Now, Rondo was a quiet boy, for much of the time he was the only child in the lonely old castle; but the village children often grew boisterous in their play, tumbling about regardless of grace and measure, while in their stout boots they clumped noisily up and down the drives and pathways, scaring the little birds with their racket. And now if you will listen you will hear how they played and romped. *Allegretto*, Liebling.

No. 3

One day a cunning little girl whom Rondo had never seen before, came up with the others to visit him, and because she was more gentle and thoughtful than the rest, he chose her for his companion. Angela would listen by the hour to the strange stories Rondo told her of what he saw in the garden and woods, when he wandered about alone at twilight, and how the dream fairies whispered their dearest secrets to him as he sat by his sky window, watching the stars.

Then often they would wander together through the long dim halls, and big quiet rooms of the old castle, till they came to an old, old room, high up, that looked out on the tree tops, for there they had found a strange table-like piece of furniture with bits of ivory in a row across the front that made a pleasant sound when touched. Can you guess what it was? Why, a little old spinet that had belonged, perhaps, to Rondo's mother. There Angela would play often a long time, while Rondo listened happily to the quaint sweet tones that seemed to be telling what he longed most to say. *Invention*, D minor, Bach; *Allegro*, *Sonata* in F, Mozart or (Haydn).

No. 4

When the days came that the mountain children took the goats to the green hill pastures, Rondo was left alone, so he grew to love the creatures of the nature world, and make them his playmates. Then when he was tired of staying indoors, the sunshine and the flowers seemed to beckon him to come out to them. So it happened that one day when he had been playing a long time with the lovely flowers in his own garden, he wandered on into the wood near by, and because his heart was light and he was content, he skipped happily along the high arched paths, over the green moss, singing softly to himself.

If Angela had been beside him then, I think she would have played a little *valse*. *Valse Gracieuse*, Helen Byrne.

No. 5

In the wood, Rondo finding the trees dressed in their freshest suits of green, wondered if the fairy-folk had not been taking special care to make them lovely for him, and peeped about among the leaves, trying to find some tiny elf to ask him. Spring had come, you see, and the wood people were glad for the new life and sunshine she had brought. It seemed to Rondo that he had never seen such joyous beauty, and he was as happy as the "Spring Blossoms" on the wild fruit trees. *Spring Blossoms*, William Hubbard Harris.

No. 6

As Rondo went on and on into the deeper wood he came upon many strange wild flowers, and looked at them all, curiously. Sometimes he pretended that he found a wee fairy sitting on a briar rose petal, and sometimes the flowers themselves seemed to talk with him. Then by and by, far away he heard some one singing, and because he had been told that the Spring gave her blossoms voices, he thought perhaps it was the "May Flowers" singing to him. *May Flowers*, Landon (duet for teacher and pupils, very easy and short in *Foundation Materials*).

No. 7

But when the singing was quite near, Rondo looked in the direction from which it came, and what do you think he saw? No — not a person, but a band of tiny elves, who came dancing up to him, and in sweet singing voices begged him to follow them. Then they formed a magic ring about him, and leading him on, cast an enchantment over him, all the while singing their *Elfin Song*. *Elfintais*, Heins.

No. 8

When it seemed to Rondo that he had gone a long way, suddenly through the green of the low bushes he saw a glint of red, and then he heard the queerest "tramp — tramp" — not a bit like walking. As soon as the elf folk heard it they all hurried forward, pushing aside the branches so that Rondo saw a whole band of tin soldiers marching toward him. He wondered what it all meant, and one of the elves told him very excitedly that these brave fellows were just coming back to the palace of their king, after a terrible, but victorious battle. Some of them, as Rondo could see, had been injured, and hobbled a little, but regardless of this they went along very gaily, with their colors flying, and band playing.

Long afterward, Rondo remembering it all, made up the *March of the Tin Soldiers*, and in it you can hear just how they tramped along. *March of the Tin Soldiers*, Otto. (Short and easy.)

No. 9

At the end of the line of march there came a very old soldier. Rondo noticed him particularly, and wondered why he marched so strangely. And why do you think it was? He had a *wooden* leg! But he was as happy as could be, for he whistled the merriest little tune. And now you will hear just how the peg leg and the whistle sounded. *The Old Soldier*, Hannah Smith. (Short and very easy.)

No. 10

After all the soldiers had gone by, the elves were very anxious to follow them, so they took Rondo with them to the king's palace, for they said there was to be a grand ball given there in honor of the soldiers' safe return. Rondo was delighted and followed willingly. Before very long the beautiful palace could be seen, shining all white, in among the green trees, and Rondo with his companions reached the steps leading up to the great doors, just as the last of the soldiers disappeared down the long hall, so they were in good time for the festivities. A guard met them at the door and ushered them into the gorgeous ballroom where the guests were already assembled. At first Rondo was quite abashed by the brilliant lights and the grandeur of the scene, for he was only a little boy, and had never been even to a party before; but all the elves who had come with him were very kind, showing him what to do and where to go. Presently a trumpet blast was heard, and the heavy curtains at one end of the room were drawn aside. All the lovely little fairies and grim soldiers drew up in brilliant lines against the sides of the long ballroom. Then, when every one was quiet, the king, followed by his pages in gay attire, came sweeping up the hall to the wonderful golden throne at the other end. Rondo was entranced and watched all the ceremonies in delight. Presently from some place sounded a few strains of music, and all was flutter and gaiety again. The stern soldiers relaxed, and went about choosing partners from the crowds of pretty fairy maids. Soon every one was ready and the dancing was begun with a stately minuet. Now if you will shut your eyes, you will hear the music that the brave tin soldiers and the cunning little fairy ladies danced to, the night Rondo was in Fairyland. *Minuet*, Op. 21, No. 2, Henry Schoenfeld. (Second grade.)

(*To be continued*)

PROSPERITY PROMOTERS

Push — The force by which one's ideals are converted into realities.

Punctuality — A saver of time and temper. A creator of confidence.

Politeness — The golden key that unlocks the door to many an opportunity.

Principle — A self-imposed rule of right conduct which governs every action.

Penetration — The ability to foresee events and consequently to provide for them.

Poise — The power of self-control which often makes one master of the situation.

Precision — The habit of being accurate and thus of averting annoyances arising from error.

Prudence — The practice of acting with discretion and of wisely husbanding one's resources.

Perception — The happy faculty which enables one intuitively to say and do the right thing at the right time.

Perseverance — The characteristic which impels one steadfastly to pursue the object in view with an invincible determination to triumph over all opposition. — *Equitable Record.*

THE PRESENT MOMENT

The mill cannot grind with the water that is past. As little can it grind with what is to come. It can grind only with what is passing through it. We can make no use of time past. As little use can we make of time to come. We can make use only of the passing moment.

There is nothing like taking scandal by the beard and treating the opinion of the world with heroic indifference. — LE SAGE.

It is not our wrong actions which it requires courage to confess so much as those that are ridiculous and foolish. — ROUSSEAU.

MICCIO HORSZOWSKI, A MUSICIAN OF THIRTEEN YEARS OLD*

RAFFAELE SIMBOLI

Miccio Horszowski is a musical prodigy. There have been many, and each day brings new ones, so that it might hardly seem worth while to speak of him; but this boy is not to be confused with the others. He has not a marvelous technique, his fingers do not run over the keyboard with lightning-like rapidity, his musical compositions, although

full of interesting bits, yet do not bear the stamp of genius. His characteristic distinction lies in the sentiment expressed in all of his interpretations, and which is far superior to his age, being that of a mature man. The eminent musician and teacher, Sgambati, of the Accademia di Santa Cecilia, Rome, and one of the greatest Italian pianists, one evening expressed himself thus: "It was necessary for a child to come to teach me how to play Chopin!" This child was Miccio Horszowski, who amazed all Rome.

At first the cultured public, accustomed as it is to the announcements and advertising so often unmerited of the usual child prodigies, — prodigies who vanish almost as soon as they appear upon the horizon, — was somewhat incredulous, especially as the prices for tickets to the little pianist's concerts were raised. The news of his success spread rapidly, however, and very soon the hall of Santa Cecilia was not large enough to hold the audiences, and little Miccio was forced to give several concerts in the Costanzi Theatre, whither flocked lovers of music, who are many in Italy, and especially in Rome. On the vast stage of this theatre the little musician seemed even tinier; he sat with dangling legs, since he could not touch the ground, his rather large head, covered with curls, inclined slightly to one side, allowed only his profile to be seen. When the piece he played was finished, and stormy applause broke forth, Miccio rose and bowed with embarrassment, timidly, then disappeared almost at a run behind the scenes. Woe to those who would interrupt with applause while he was playing! He became irritated and gave the audience a ferocious glance.

"Applause annoys me," he said one evening as he was leaving the theatre, "and I notice that it often breaks out in the most inopportune moments. The ladies who come to pet and kiss me are my worst enemies. I am not their little boy! Why do they disturb me? And then they are always calling me a pretty child! and asking me if I like toys. But I am a man, not a baby! No, I do not like toys; I like music."

He said all this with comical gravity, at which I would have laughed, had I not been face to face with a precocious little man, already conscious of his merits, and demanding equality of rights and treatment. Miccio is not modest, but seeing himself petted and caressed as he is, and with his intelligence, he naturally feels the importance of his position. One evening Sgambati wished to take him to hear some great musician who was to play Chopin. Miccio arrogantly replied: "Play Chopin in my presence!"

Last summer I wished to show him an illustrated Spanish magazine in which was a picture of him with that of a rival, who at six years of age had been the wonder of the Spanish court. Miccio hardly glanced at the cut, and passed the magazine to his mother, who at once frowned, and begged me to translate some portion of the article. Miccio's mother has toured Europe for three years, accompanied by his manager, with whom she has a contract for six years. The poor woman, pale and thin, seems always preoccupied and thoughtful. The enthusiasm which her son everywhere arouses does not make her happy and gay; she is always worried about her little musician, and watches over him with wise care.

LITTLE HORSZOWSKI AND HIS MOTHER

The mother was born in Lemberg, in Gallicia, which was also Miccio's birthplace. Her husband still has a music and piano shop in that tranquil Polish town. Mrs. Horszowski, herself an excellent musician, gave Miccio his first instruction,

*Translated from Mr. Simboli's Italian manuscript by Elise Lathrop.

then took him to Vienna, to the celebrated Leschetizky. The child was not one of the usual musical prodigies — who end by doing nothing. Miccio at once made an impression, owing to his striking artistic personality. Chopin, Schumann, Beethoven, and Bach found in him a remarkable interpreter. Talent for music is hereditary in the Horszowski family. Miccio speaks with enthusiasm of a little sister of six years of age who plays the violin wonderfully; another older than he, not less talented for the piano, died quite suddenly. This is why his poor mother watches over him with such anxiety. With another little brother Miccio is not satisfied, because the child, who is but little more than two years old, "*ne joue encore d'aucun instrument*" ("does not yet play any instrument").

Miccio's concerts have the fault of being too long; the programs contain the greatest names in music, from Bach to Beethoven, from Rameau to Rubinstein, Liszt, Mendelssohn Paderewski. He gave six concerts in Paris, with six entirely different programs, and without regard for the limited extension of the child's hand, for Miccio can barely reach the octave. He makes the quickest, most unconcerned crossings to supply this deficiency due to his tender age. Miccio has played a prelude and fugue in C minor by Bach, and the thirty-two variations of Beethoven,—pieces which pianists rarely play, owing to their great difficulty.

Also worthy of note is the fact that Miccio always plays without music (this is far more rare in Italy than in our own country.—Translator.) His memory is remarkable. A well-known critic remarked that in the field of sentiment this young musician's personality shone resplendent. In such matters instruction has but a limited value, sometimes even does harm. Miccio does not seek unusual, odd effects; for him the pages of Chopin are clear and transparent; he plays them as the author wrote them, without substituting or amplifying them with ideas of his own. But he also imbues them with crystalline clearness; the rhythms are precise, without emphasis, the melody develops with sincerity, and vibrates with passion.

If one meets Miccio on the street, if one is fortunate enough to speak with him then, one finds quite a different little man. He is a vivacious boy, full of curiosity, who assails one with a series of questions on all kinds of subjects: botany, physics, politics, natural science, music, photography. Especially photography interests him, and if you are unfortunate enough to show him a camera, you will never escape. Miccio at once takes it, and wishes to learn the most minute particulars as to its operation. He has a small one of his own, given him by his manager, and he takes many snap-shots, but wishing to save himself the bother of developing and printing them, he distributes the films among his numerous admirers, saying with a seriou smanner: "*Voilà, monsieur.* Develop them quickly!"

Little Miccio loves pictures, and is enthusiastic over those of Raphael, of which he has seen a number. He is a passionate collector of photographs, butterflies, stones, and stamps. Venice is the city which most impresses him! "When I marry," he said one evening, "I shall be married in a gondola, and live in Venice, the enchanted city."

A journalist met Miccio in a train one day, and offered him a cigarette.

"Thank you, I do not smoke; I eat matches."

"Eat matches?" thought the journalist to himself, "is it possible?"

Miccio laughed maliciously, then explained that the matches that he ate were those of sugar which are sold in pastry shops.

Another little trick of Miccio's is that of readily falsifying signatures, beginning with those of his mother and manager, and ending with those of Beethoven, Liszt, and even that of the pope.

A FAMOUS FRENCH COMPOSER NOW IN AMERICA

CAMILLE SAINT-SAENS, AT THE AGE OF 12

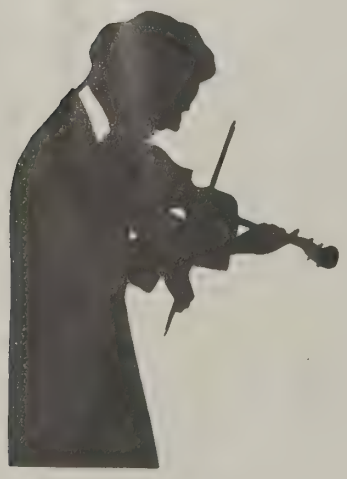
A DUO

THE "TOY SYMPHONY"

EMILIE FRANCES BAUER

No child's musical life is complete without at some time or another having enjoyed the experience of playing in an orchestra, but here the secret must be disclosed. What is known as the *Kinder Symphonie* — in other words, the *Toy Symphony* — is not always confined to children. Many grown people have found that it makes fine sport. Perhaps it was in this spirit, or perhaps out of his love for children, that old "Papa" Haydn really wrote and orchestrated a toy symphony for piano, two violins, and bass, and seven toy instruments, these consisting of rattle, cuckoo, nightingale, triangle, drum, trumpet, and quail.

The Haydn Symphony is perhaps the best known, although other more modern musicians have contributed some very interesting and amusing works. The instruments for the toy symphonies may be purchased at any music store and include a cuckoo with bellows, nightingale, quail, mirliton, rattle, triangle, trumpet with two tones, drum, zobo, a whip snap, a metallophone of fifteen tones, bell-tree, trumpet with four tones, bells, champagne pop, sleigh-bells with handles, wrist bells, tin flute, and castanets.

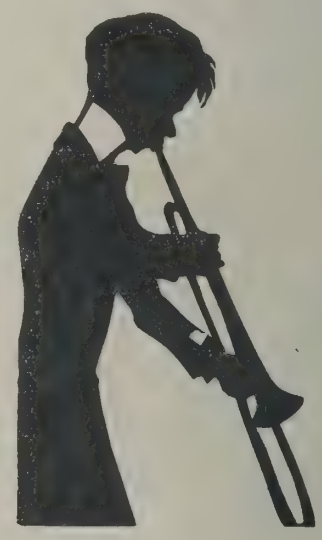


It is surprising to note what a large number of very attractive works of this kind are to be had; for instance, K. J. Birchoff has written a children's symphony for piano, two violins, and 'cello, and the toy parts include cymbals, two cuckoos, rattle, three trumpets, quail, and drum. F. X. Chwatal has written several, one a *Christmas Symphony*, Op. 183. This must have been a success, because his Op. 193 is another toy symphony, entitled *A Merry Sleighing Party*. Again, his Op. 233 is a toy symphony entitled *The Young Musician* with toy parts consisting of trumpets, tin flutes, zobo, triangle, castanets, and drum. The well-known writer of sonatines and sonatas, A. Diabelli, wrote this Op. 33 as a sonata arranged for toy instruments. Carl Reinecke, who has written more extensively for young people than perhaps any one else, has a children's symphony very elaborate in form. F. Spindler wrote a toy symphony entitled *Picnic*. One of the most elaborate works of this class of music is by R. Thiele, and the parts represent Morning Serenade, Concert in the Forest, and Military March. This is orchestrated in many different ways, with

and without a string quintet and flute in addition to the toy parts.

There are always occasions when something of a lighter nature fills in a musical program without making it undignified. Surely the name of Haydn can but grace a program in no matter what he wrote. Perhaps among the musical clubs the moment comes when, tired of everything else, a little recreation is not out of place, especially if one may invite the children and interest them even beyond the point of amusement; but to allow the children themselves to be the performers is the most direct attraction and indeed a fine education for the little ones.

On the educational side the benefits that are apparent are primarily the development of all the senses related to hearing and producing music, because after a child has participated in a performance of this kind his own relation to his toy fifes, horns, and drums will be totally different from what it was before. In this way a sense of rhythm and melody is developed which represent a material foundation upon which to build later on.



The old adage of how to cook a rabbit stew, by first catching the rabbit, may be applied here. First get your instruments in tune with one another and with the piano. This is not so hard as may be imagined, because, when prepared especially for a toy symphony, they already come tuned to international pitch. Assemble the children, make them familiar with the melody by having the piano part played a number of times. Then the conductor may pick up such instruments as are called for: the rattle, the cuckoo, etc., and demonstrate by degrees what will be expected of the performers. A good way is to divide the composition into its different periods, showing why the embellishments should stand forth at the different points. It is well to take one instrument at a time to look on with the pianist and learn from the tune and the time when to come in.

While of course at the production and even at rehearsals the conductor will always give the signal, the work should be in such condition that the players are not dependent upon the signals from the conductor. While it is not absolutely necessary that all the instruments should be present at each rehearsal from the beginning, it is by far the better plan, because every time the players hear

the work it is that much the better impressed upon the mind, or, better still, upon the ear. In the event of using the violin and bass parts it is better to carry on rehearsals for these alone much in the same way that a string quartet rehearses.

It is well to have more experienced players at these instruments because there must be a foundation or a body which can absolutely be relied upon

to a certainty, for time and for accuracy as well. In this as in every other sort of music the warning must be heeded. Do not attempt to present the work until it is in perfectly finished condition. There is more than one reason why this should be adhered to very closely. Anybody who ever undertakes anything with children has additional responsibility, because no one knows how slight an action may have a bearing upon the future of a child who is very impressionable and very likely to be mistaken in his estimate. To present a work of this kind carelessly would be one of the most serious errors conceivable, not for the work itself, not for those who are likely to hear it, but for the effect which it would have upon the children who take part.

Perfect discipline must be enjoined at the rehearsals, as there is no excuse for lack of attention, because each player must practically know all the other parts as well as his own from hearing them and thereby the better knowing when his own part comes in.

A word for the conductor. He must know the correct beat, which must be protected with the right hand while the left hand may here and there motion toward this or that instrument, or may express many different cues as required, but the regular beat with the baton in the right hand must never, for any reason, fail, because upon this hangs the weight of the work. The pianist should be where he can see the conductor, even without looking steadily in his direction.

The result is well worth the trouble, and if one wished smaller numbers as encore to a symphony of such importance as Haydn's or Diabelli's or some of the larger works mentioned above, there are some very attractive and tuneful little works, such as *The Little Trumpeter* by G. Tuch, or the *Electric Polka* by C. C. Roeske. This last has been played by the orchestra of the Kindergarten for the blind. There is also a *Christmas Festival March* by A. Boerner, a *Festival March* by A. Gerstenberger, and R. Eilenberg has orchestrated his well-known *At the Mill Stream* for toy parts.

A LETTER TO THE FATHER OF A PIANO PUPIL

FRIEDRICH WIECK

It is a pity that you have no sons, for a father takes great delight in his sons; but I agree with you, when you say that, if you had one, you would rather he should break stones than pound the piano. You say you have many friends who rejoice in that paternal felicity, and whose sons, great and small, bright and dull, have been learning the piano for three years or more, and still can do nothing. You are doubtless right; and, farther, they never will learn anything.

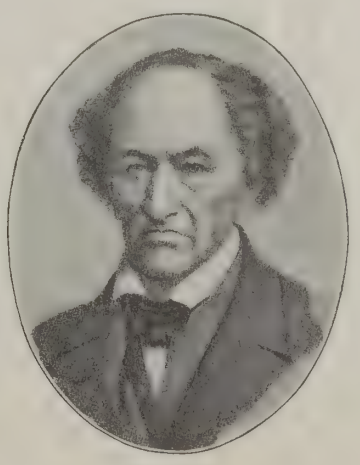
You ask, Of what use is it to man or boy to be able to stammer through this or that waltz, or polonaise, or mazurka, with stiff arms, weak fingers, a stupid face, and lounging figure? What gain is it to art? You say, "Is not time worth gold, and yet we are offered lead?" And the poor teachers torment themselves and the boys abuse art and the piano; and at the end of the evening, in despair, torment their own wives, after they have all day long been scolding, cuffing, and lamenting, without success or consolation.

You speak the truth. I have had the same experience myself, though not to the same degree, and though I did not bring home to my wife a dreary face, but only a good appetite. But I did not give myself up to lamentation over piano teaching. I gathered up courage and rose above mere drudgery. I reflected and considered and studied, and tried whether I could not manage better, as I found I could not succeed with the boys; and I have managed better and succeeded better, because I have hit upon a different way, and one more in accordance with nature than that used in the piano schools.

I laid down, as the first and most important principle, the necessity for "the formation of a fine touch," just as singing teachers rely upon the culture of a fine tone, in order to teach singing well. I endeavored, without notes, to make the necessary exercises so interesting that the attention of the pupils always increased; and that, even after a short time, they took great pleasure in a sound, tender, full, singing tone; an acquirement which, unfortunately, even many *virtuosos* do not possess.

In this way, we made an opening at the beginning, not in the middle; we put the horse *before* the cart. The pupil now obtained a firm footing, and had something to enjoy, without being tormented at every lesson with dry matters to be learned, the advantage of which was not obvious to him, and the final aim of which he did not perceive. Until a correct touch has been acquired, it is of no use to talk about a fine singing tone. How can we expect to arouse an interest by mere toneless tinkling, while stiff, inflexible fingers are struggling with the notes; while the pupil sees only his inability to do anything right; and receives nothing but blame from the teacher; while, at the same time, so much is to be kept in mind, and he must be required to observe the time, and to use the right fingers?

Poor, stupid children!



FRIEDRICH WIECK

Later, after teaching the notes, I did not fall into the universal error of selecting pieces which were either too difficult, or such as, though purely musical, were not well adapted to the piano; but I chose short, easy pieces, without prominent difficulties, in the correct and skilful performance of which the pupil might take pleasure. Consequently, they were studied carefully, slowly, willingly, and with interest, which last is a great thing gained; for the pupil rejoiced in the anticipation of success. The struggle over single difficult places destroys all pleasure, creates disgust, and, what is worse, it tends to render uncertain the confirmation of the faculty already partially acquired, — of *bringing out a fine legato tone, with loose and quiet fingers and a yielding, movable wrist, without the assistance of the arm.*

One thing more. Owing to an over-zeal for education, children are kept in school many hours a day, and then they are required to work and commit to memory in their free hours, when they ought to be enjoying the fresh air. But when are they then to have their piano lessons? After they have escaped from the schoolroom, and consequently when the children are exhausted and their nerves unstrung. What cruelty!

Instead of bread and butter and fresh air, piano lessons! The piano ought to be studied with unimpaired vigor, and with great attention and interest, otherwise no success is to be expected. Besides this, much writing, in itself, makes stiff, inflexible fingers. But when is the child to find time for the necessary practice of the piano lessons? Well, in the evening, after ten o'clock, for refreshment, while papa and mamma are in bed! And now, after the school days are happily over, and the children have possibly retained their red cheeks, then their occupations in life lay claim to their time; or, if they are girls, they are expected to busy themselves with embroidery, knitting, sewing, crochet, making clothes, housework, tea parties, and alas! with balls; and now, too, comes the time for lovers. Do you imagine that the fingers of pupils sixteen years old can learn mechanical movements as easily as those of children nine years old? In order to satisfy the present demands in any degree, the technique should be settled at sixteen. Under all these circumstances, we find the best teachers become discouraged, and fall into a dull routine, which truly can lead to no success.

In conclusion, I beg you to invite the piano teacher, Mr. Strict, to whom you have confided the instruction of your only daughter, Rosalie, to pay me a visit, and I will give him particular directions for a gradual development in piano playing.

But I shall find him too fixed in his own theories, too much of a composer, too conceited and dogmatic, and not sufficiently practical, to be a good teacher, or to exert much influence; and, indeed, he has himself a stiff, restless, clumsy touch, that expends half its efforts in the air. He talks bravely of études, scales, etc.; but the question with regard to these is *how they are taught.*

The so-called practice of exercises, without having previously formed a sure touch, and carefully and skilfully fostering it is not much more useful than playing pieces. But I hear him reply, with proud and learned self-consciousness: —

"Music, music! Classical, classical! Spirit! Expression! Bach, Beethoven, Mendelssohn!"

That is just the difficulty. Look at his pupils, at his pianists! See how his children are musically stifled, and hear his daughter sing the classical arias composed by himself! However, it is all musical!

Farewell.

HOW I SECURED MY MUSIC EDUCATION

GERTRUDE ARNOLD

I live in a city of fifteen thousand inhabitants, about two hours' distance from New York. There are eight churches in the city and the standard of music among them is high.

Before I was sixteen I had lessons from indifferent teachers, who, I have no doubt, did me as much harm as good. Just before my sixteenth birthday, in November, I commenced to take organ lessons. My teacher was a graduate of the Royal Academy of Music, London, and is organist in the Episcopal church, which has by far the best music in all the city. My parents, who had sustained heavy losses, agreed to give me $50.00 for lessons, and I worked hard for twenty-five weeks.

At the end of that time I told my teacher that I must stop. He then proposed that I give my services in return for lessons, so my work went on, and I accompanied at choir rehearsals, and played the mid-week service. As time went on, I was able to accompany several cantatas, both at the piano and organ, and before summer came I gave my first organ recital.

I practiced the organ and piano every day, for I was taking piano lessons from the same teacher. Up to this time I had earned no money, but in June, seven months after my first organ lesson, I was asked to act as substitute for one or two Sundays for an organist in a near-by town. I accepted, and it proved to be a successful beginning; for nearly every Sunday that summer I played for different organists in my own city, earning in all about $35.00.

In the autumn I continued with my lessons, and still assisted in the church. Two pupils were offered me. At least one Sunday in a month I was called to act as substitute. From this time I bought most of my music, and all of my clothes — no small item, as any girl knows. I accompanied some larger works, and rehearsed the choir boys after school.

The following summer my teacher went to England for his vacation, and after the approval of the vestry, left me in charge of the music. I looked after the boy choir and accompanied the full musical services of the church. There was more responsibility about this than anything I had done before, but I truly enjoyed it. Then my mother was taken very ill and I was obliged to discontinue my lessons, but I contrived to get organ practice two days a week, so that I should not lose. I had six pupils. In December the Universalist church asked me to become their organist, and I commenced my duties the first of January. The choir, composed of young girls about my own age, had for the leader a woman of ability who gave her services. On the first of March she resigned to sing in a quartet choir. I took her place as instructor with a small increase of salary.

I was given $200.00 a year, and my pupils mean $12.00 a month. I am glad to say that the church is well satisfied with the music.

My musical education is not finished, — far from it; but ere long I hope to be accepted as a pupil of one of the best organists in New York, and that will be another step ahead. Another six months will pass before I am nineteen. I am ambitious to have charge of the music of a large city church. One year, five years, ten years — when will my ambition be realized?

ARION — A MUSIC STORY FOR CHILDREN

KATE KINGDON

Once upon a time there lived in a far-away country a king who was a great lover of music. One day he issued a proclamation which he commanded to be sent over all the land. It was a general invitation to all musicians, far and near, to enter a contest which would be held at the palace, and to the one who was adjudged the best player, a prize was to be given by the king. They were to meet in thirty days from the time the proclamation was issued.

Among all the musicians who gathered at the appointed day to play before the king, was a beautiful youth named Arion.

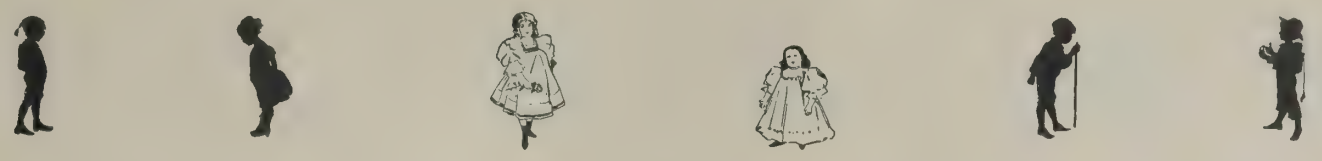
The instrument he played was called a lyre, and when his turn came to stand before the king many laughed quietly among themselves; some because of his youth, and others at the simple instrument he carried. But Arion walked fearlessly down the marble hall between the long rows of musicians, some of whom had played and some awaiting their turn to play, and stood in his innocent youthfulness before the magnificent splendors of the king upon his throne, surrounded by all his court. He lifted his lyre, and a sudden hush fell upon all assembled in the great marble hall of the palace, for the young Arion brought from his instrument "such floods of delicious music" that the king was astonished, and all the noble courtiers held their breath to listen. When the contest was ended and all had done their best, the king awarded the prize without hesitation to Arion, and soon the fair youth was on his way homeward.

He went on board the ship which lay at anchor in the harbor. It was toward the close of the day, and they were quickly sailing away westward.

There was very little wind, and as Arion sat in the boat he watched the waves and thought over all the music he had heard in the king's palace, sometimes playing from memory melodies played by the many different musicians who had tried their best to win the prize. The latter lay near him.

It was a bag of gold.

He wished the ship would not move so slowly, for he was in haste to be once more at his home



in Corinth, where lived another king, who was his friend. This king's name was Periander, and he was King of Corinth.

"How slow the ship moves," thought Arion; "I wish it would go faster. I must see Periander. How glad he will be that I have won the prize."

And then as he sat with his lyre at the side of the ship he played such sad, dreamy, tender music that all the sailors drew near to listen.

Some of them saw his bag of money lying beside him. "See how much gold he has!" they said to one another. "Let us toss him, at dark, into the sea. No one will know it. They will think he has fallen overboard and then the gold will be ours."

So when all was dark on board the ship, and poor Arion still sat thinking of home and playing softly such sad music, the sailors seized him. He begged piteously for his life.

"Oh! take my gold," he cried, "only spare my life! Let me go home! Let me go home to Corinth!" But they would not listen.

Then he begged to be allowed to play only once more on his lyre, and when they consented he played such sad, sweet music "that the whole air" and even the waves "seemed silent to listen." Then, before the sorrow-laden minor strains had died away on the sad sea-breezes, Arion, holding his lyre in his hands, jumped into the sea. The blue waves covered him and the ship sailed far away.

Now all the fishes of the sea had heard that beauteous music and had followed fast after the ship while Arion was playing those last sad minor strains. They gathered about him when he leaped down among them, so many, many fishes — some of them of most beautiful colors. They seemed to wish to help him, and among them was a great dolphin, upon whose back Arion climbed. Then, rising to the topmost crest of the waves, the dolphin swam toward shore — much faster than the ship had sailed — and behind them came the beautiful, gleaming fish that had followed after the ship while Arion was playing. The moon rose over the sea, shedding out before them a

broad, shining pathway. Far above them stretched the "floor of heaven,"

"Thick inlaid with patterns of bright gold."

Faster, still faster, swam the dolphin over the gleaming path of light.

Soon a shadow seemed dimly outlined in the distance. They were rapidly nearing the shore, and not far away, gleaming silvery in the moonlight, rose the towers and spires of Corinth. Beautiful Corinth! Mother city of Corcyra.

And so at last Arion leaped from the dolphin's back safely upon the shores of Greece, waving above him for very joy of heart his glittering lyre, while all about him in the clear shallows of the moonlit water swam the multitude of fishes, and before him, upon the gently undulating wavelets, rested the great, brave dolphin who had brought him hither.

Then Arion sat him down upon the golden sands, and even as the music played by Orpheus of old drew, irresisting, to him the wild beasts of the field, even so did Arion's music charm the fishes of the deep.

The golden strings of his lyre glittered in the moonlight that flooded land and sea. There was a hush over all things, broken only by the murmur of the waves, which seemed ever voicing a subdued accompaniment to the exquisite melodies borne out upon them by the gentle zephyrs.

"Like the sweet south
That breathes upon a bank of violets."

the last chords died away.

Arion arose and stood upon the sands.

"You have been kind to me, dear dolphin, dear fishes," he said. "Farewell!"

He turned away waving a last salute, and the sea seemed suddenly alive for the multitude of

fish which leaped for an instant to the surface as though in answering farewell, and then turning, dived far, far away toward the vast coral depths of their ocean home.

The first gleam of dawn was lighting the eastern sky above the great mount of Apollo beyond Corinth when Arion entered the city. He hastened toward the palace of King Periander, which stood surrounded by the gleaming white Corinthian columns in the centre of a great square in the heart of the city. All the sentinels standing on guard outside the palace knew Arion, and he passed, with his lyre in his hands, unquestioned between them, and mounting the long flight of steps, was admitted to the king's presence.

Periander was still in the banqueting hall, though the day was breaking.

All the philosophers and most brilliant men of Corinth were assembled with him, taking part in the symposium or banquet, and Arion with his lyre was welcomed to their midst.

He advanced toward Periander and bowed low before him.

"I come back to thee, dear king," he said. "I won the prize, but it is now forever lost."

And, being questioned, he told the king of his voyage in the ship, and of the wicked sailors, and of the great, brave dolphin who had saved him from the sea and brought him safely to the shores of Greece.

Then was Periander angry and sent his servants to seize the sailors and bring them before him when the ship came into port.

"They merit death," he said in fury, "and death the penalty shall be!"

The symposium was ended and the sailors were led in before the king.

They stood bowing low before him, cringing like those who are wicked at heart.

Arion, following the king's bidding, had stepped behind a great white marble column.

"Was not a young musician one of the ship's passengers?" so asked the king.

"He left the ship at a little town," they answered.

Then Arion stepped from his hiding-place and faced the wicked men, who, at sight of him, fell prone upon their faces.

They believed him to be a spirit.

"Dogs!" cried Periander. "No longer shalt thou live. Begone!"

But the fair youth Arion had a kind and noble nature.

"Spare them," he pleaded. "For my sake, oh, king, forgive them!"

And so the king, for Arion's sake, spared them their lives; but, not wishing that they remain within the Grecian boundaries, first compelling them to restore the bag of gold, sent them far,

far away, banishing them from the shores of Greece forever.

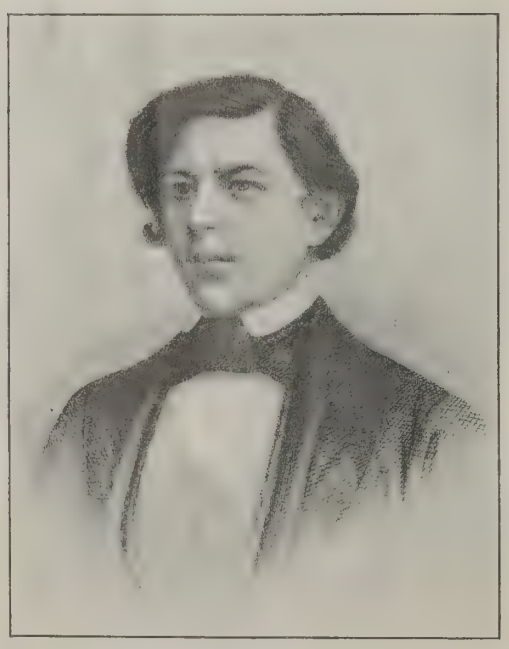
And with his prize beside him, Arion sat at Periander's feet playing for his friend, the king, upon his lyre such liquid melodies as never even had the gods upon Olympus heard in their divinest dreams. — (*Reprinted.*)

TWENTY-FIVE PIECES FOR BEGINNERS

EDITH L. WINN

The term "beginners" is a broad one. I have among my pupils boys and girls who are from five to eighteen years of age. Many of these are in the first year of study. A method book for a girl of ten who has played the piano for several years before taking up the violin is not at all adapted for a pupil who is seven years of age and who knows nothing of music. The wise teacher will adapt both method book and subsequent pieces to the pupil's capacity. She will also examine carefully the method book in its entirety, striking out exercises which have no practical value. I would rather teach bowing from Kayser I (the first exercise), than from any other portion of the book.

No exercise book is entirely practical. We should select the best exercises for pupils and drill on practical ones. Several of my little pupils who have had ten lessons are playing in unison the *Happy Jack Tunes* (open A and D strings) by Harriett Sawyer; also my *Five Little Pieces for Children.*



JOSEPH JOACHIM, IN HIS YOUTH

Another set of children in the second year are playing in unison an *Air with Variations* by Papini. I do not believe in crossing four strings much in the first year, if the pupil is under eight years of age. There must be very fair accidental notes and also no difficult intervals or complicated bowings. Melodious, flowing pieces, easy keys and bowings, joyous subjects and few skips from string to string are best.

Few people know how to write good pieces for children. The question of suitable exercises for children is not as serious as the choice of suitable pieces. For my part, I cannot see why so few violin compositions for beginners are violinistic. Only yesterday I discovered in Hubay's *Scenes for Childhood* a very simple melody written in four flats, and Hubay is a violinist.

I have said that pieces for beginners should be in easy keys. I prefer G, C, D, A, and F. Slumber songs give a flowing melody. Little dance forms are excellent for rhythm. I wish that some one would arrange some old English dances like the *Danish Folk Songs* arranged for children by Brown-Wilhelmj. Some recent *Little Tin Soldier Tunes* by Harriett Sawyer, herself a great lover of child life, are a valuable addition to the scanty literature of the violin for beginners.

How many pieces should the child have in the first year? Only as many as he can memorize and play well. Pieces should only be given when other work is well done. I had four pieces at the Boston Conservatory while in my first year with Julius Eichberg. I was satisfied, why should children wish so many? The habit of learning things well should be acquired early. Strange to say we have to learn it in America, for when we go abroad we just go over things and never finish them. Teachers there presuppose that we are young to work up our own *répertoire.* How few of us ever do when we get back to America!

I have made a list of solo for children. I would suggest that teachers examine the excellent arrangements by Theo. Kleinke for four violins and piano. Even children in the second year can play some of the easier parts of these pieces, like the Haydn Minuet, etc.

It is well to start the children in *ensemble* work early, but good quartets and trios must be selected. Mendelssohn's *I would that My Love* and the *Wedding March* are adaptable.

Children's work is very fascinating. To teach a child well the teacher must seek child literature. I write out all my exercises for little folks for two months at least. Then use the Rosencranz method because it involves drill. I do not teach all the four strings at once. I spend at least three weeks on A and D, then I take G and E. I adopt the Daily Finger Exercises by Sevcik as found in Book I on Technic.

While it is not possible to watch the practice of students closely, even in a college where the practice is superintended, the practice of scales and exercises before pieces are played is rigidly enforced, at least in the class room. Children can be made to love the violin, but the first steps are hard. The wise teacher will have the children hear each other frequently. An *ensemble* number played by older pupils is very stimulating to the younger ones.

TWENTY-FIVE EASY PIECES FOR THE VIOLIN

Selected by Edith L. Winn.

The very first tunes—largely on open strings

1. Happy Jack Tunes.....*Harriet Sawyer*
2. Five Little Melodies. C. Fischer.....*E. L. Winn*
3. Gavotte.....*Leo Oehmler*
4. March.....*Leo Oehmler*
5. Slumber Song.....*De Seve*
6. An Air with Variations.....*Papini*

OLE BULL, IN HIS YOUTH

7. Little Tin Soldier Tunes.....*Harriet Sawyer*
8. Petite Berceuse. Op. 27.....*Th. Hermann*
9. Six Little Easy and Melodious Pieces. Op. 110.. .....*Arthur Seybold*
10. Ten Pleasing Recreations. Op. 62..*L. Mendelssohn*
11. Scenes d'Enfants. No. 1, Op. 84.....*Hubay*
12. Twelve Little Flower Pieces.....*Geo. Lowell Tracy*
13. Air de Ballet.....*Papini*
14. Schüler, Concertino, No. 4. First Position...*Huber*
15. Kleine Suite. Op. 88. Gavotte, 2nd year...*Pache*
16. Lyrische Stucke, Haydn Menuett, etc. Op. 45. Breitkopf and Härtel.....*Hermann*
17. Bolero.....*Hermann*
18. Twelve Little Pieces. Gluck, Menuett, etc. Parts and 2.....*Alfred Moffat*
19. Eight Bagatelles. Op. 18, No. 3. B. F. Wood. .....*Ellerton*
20. Miniatures, Bosworth Edition.....*L. Mendelssohn*
21. Album for Beginners.....*Spier*
22. Twenty-five Pieces. First Position. Schirmer Edition.....*Geo. Lehmann*
23. Concerto. First Position.....*F. Seitz*
24. Suite in Olden Style.....*G. St. George*
25. Duos. Op. 99, No. 1.....*Dancla*
26. Duos, Bacarole-Standchen.....*Pache*

FLAG GAME

A flag game would be entertaining and attractive, because of the pretty decorations that could be made from bunting, flags, etc., for the table and rooms. "Flag" itself as a preliminary to dancing, cards, or any of the well-known games, such as parlor tennis, indoor croquet, authors, nine-pins, battledore and shuttlecock, makes an excellent filler, and being new will be enjoyed by all young persons who have not before hunted for flags. While it is simple to play flag, the game necessitates the use of the entire house for the hiding of favors, or miniature boxes of candy carefully wrapped in flags and numbered, so that when the hunters find them they will know by the numerals which one is theirs.

The hunting is done in pairs, one girl and one boy, both of whom must hunt until they discover the numbers that correspond to theirs. The numbers each couple hold are the same, but the boy's favor is wrapped in a "stripe" of the flag and the girl's in a "star." Should one couple find the numbers belonging to another, the hiding place must not be divulged, for the object of the game is for two persons hunting together to find the two gifts in the shortest space of time. For this a prize may be offered, but that is optional, for searching through bureau drawers, on tops of cabinets, closets, under rugs, in the folds of portières, even in the springs of chairs is fun, but of course if there is a prize to be awarded for a speedy search the hunting is done more quickly and with more spirit.

To prepare Flag Numbers

In preparing the flag numbers an entire one must be made of paper or cloth and placed on a table where the stars and stripes can all be pasted on pieces of cut-out cardboard, that are fitted together to form a flag on a flat surface. The numbers are printed in bold, large numerals on the back of each star and stripe, and there is a corresponding stripe number for each star. In making the flag, if the hostess knows just how many guests will be present, the size of this emblem can be accurately judged, and then, too, as the hunting is done in pairs, it will be more amusing to have no extra boys or girls.

The favors, some trifles, that will be appropriate for either boys or girls, should be selected and carefully folded in pieces of paper with stars or with stripe decorations. On top of each of these gifts, that will probably have to be tied in the wrappers with narrow baby ribbon in any of the flag colors, the numbers by which the favors are known should be printed in large numerals. White ones will show up best on the stars, and black ones on the red or white stripes.

Attractive Flag Refreshments

To avoid complications that might arise if a star or stripe were lost, a hole is punched in each piece of cardboard as the guest selects it, and a red, white, or blue ribbon is inserted. With this ribbon the number may be tied securely to a buttonhole or around a girl's wrist or neck. It should be announced at the beginning of the game that any person losing a star or stripe will be practically out of the sport, for the judges will not accept three emblems when four are required.

If "flag" consumes enough time, it would be well to have refreshments served as soon as the last couple turns in its finds and prizes have been awarded, in which case the flag partner would naturally be the dinner one, too, or if cards are started, then the couples hunting together would be partners at the beginning. In dancing or any of the indoor games the same rule for partners holds good.

As to the table decorations, a simple and effective style would be tiny silk flags and an emblem at the plate of each guest, sandwiches made of white bread with red jam or jelly between and a blue ribbon around the centre, to carry out the color scheme. If salad is served, a miniature flag may be put in the centre of the chicken, lobster, potatoes, etc., while the ices may not only be made in red, white, and blue colors, but in the mold of a flag or an emblem, or the ice cream may be served in a cup decorated with a flag. A large cake set in the middle of the table should, of course, be ornamented with a flag.

Bunting hung in festoons from the corners of the room to the chandelier or flags draped behind pictures, over mantels and above doors would transform any house and give it a festal appearance that would be most effective and decidedly appropriate for "flag." — Rosanna Schuyler in the *Evening Telegram*.

MUSIC LITERATURE FOR CHILDREN

FRANK H. MARLING

Fortunate, indeed, in their books are the children of this favored generation. The young people of no previous age have been so bounteously provided with such treasures of type, paper, illustration, and binding. What wealth of color, what profusion of pictures, what alluring features of every description now go into the making up of a child's book! And on the intellectual side, with what attractive skill are the subjects presented, how vividly is the child nature appealed to, and with what picturesque charm is knowledge set forth for the young ideal. In this development of the application of the most modern methods to the education of youth, music books have had their share, and this article aims to tell in brief compass about some of the most helpful of them.

Biographical and Historical Works

One of the most inviting departments of music study for children is that of the lives of the great composers. Much may be done to awaken the interest of the pupils and relieve the tedium of technical study by telling them, or encouraging them to read the stories of the lives of the great masters of the art. More and more is this becoming an inspiration to students and a method employed by wise teachers.

There are not a few compilations suitable for such a purpose, of which we can mention only a selection. One of the most original of these is called *Letters from Great Musicians to Young People*, by two ladies, A. B. Crawford and Alice Chapin. In a very pretty preface the authors picture a little girl discouraged over a musical composition she is studying and wishing that she could meet the composer to talk with him about it. Mozart appears to her n a vision and tells her to look around, in doing which

she sees the kind faces of many of the great masters, who speak encouragingly to her and then vanish. Afterward, on her piano, she found each day a letter from one of the masters, who tells her in an intimate, personal way about his own feelings, experiences, and achievements. It is a charming conceit, and the illusion is maintained with much vivacity and a plentiful use of local color. The authors have also succeeded in conveying many facts about the lives and compositions of Palestrina, Bach, Handel, Haydn, Beethoven, Weber, and others.

Upon more ordinary lines is the *Young People's History of Music*, by James C. Macy, which has been specially adapted to the needs of youthful readers, the language being as simple and untechnical as possible. The historical portion is of necessity very much condensed. There are short biographical sketches of seventeen famous composers, with a good full-page portrait of each, which add very greatly to its attractiveness.

A popular book for twenty years with many musical people has been *The Story of Music and Musicians for*

Young Readers, by Lucy C. Lillie. These chapters originally appeared in Harper's *Young People*, and were received with such interest that they were issued in book form. The author is a trained children's writer, having brought out a number of juvenile publications. She employs her story-telling art here with great effectiveness, making an eminently readable book. It may lack something in scientific accuracy, but it contains a great deal to stir the imagination of the young. The youthful reader is to be pitied who cannot find much therein to delight him and whet his appetite for more. There are also a number of engaging illustrations, and scattered throughout are valuable hints and bits of useful knowledge, all set forth in easy conversational style. For children of an older age may be mentioned *Germany's Famous Composers* by Maude Allen, in a very dainty, petite green and silver binding. It contains all the great German masters, whose

careers are concisely summarized, though not to the exclusion of enlivening details.

In line with the most approved pedagogical ideas is Thomas Tapper's *First Studies in Musical Biography*, a book which has met with continued favor since its first issue six years ago. Mr. Tapper's reputation as a teacher of musical methods extends over the whole country, and few educators possess his gifts of clear statement and felicitous expression. This book is meant for actual study, and presents matter needful for the student's first knowledge, but it especially aims to suggest and encourage the student to further study for himself. Distinctive features are the fixing of a composer not merely in his century, but in relation to other men, and the correlation of prominent musical facts with prominent facts in general history, especially that of the United States. A valuable department is that of the review questions at the end of each chapter, which, if conscientiously used, will greatly assist the reader to master his material.

Mr. Tapper's other volumes appeal mainly to younger children. In *Music Talks with Children* he shows his rare sympathy with, and understanding of, the child mind. It is meant largely for the use of parents or teachers, suggesting to them a basis for simple talks to the young about those aspects of music appealing most strongly to youth. Mr. Tapper has a strong conviction that music can be lifted out of dull routine and be made a living thing, and he holds that "they should know it as an art full of beauty and of dignity, of pure thought and abounding in joy." He says pungently, "The teacher's knowledge is not a hammer but a light," and that music "must be led out of the individuality and not driven into it."

A companion volume to this is *The Child's Music World*. It has to do with phrases of musical history, but the old themes are handled in a delightfully fresh and original manner. The author's individuality is a very pronounced one, and no one else could have written his books. They abound in unexpected sayings, novel points of view, quaint comparisons, and lively fancy; but they are all highly stimulating and suggestive, and should be carefully studied

by those who are concerned with the musical training of the young.

His fourth volume, *Pictures from the Lives of the Great Composers for Children*, is planned on more ordinary lines than the foregoing, but in its handling of the more or less familiar biographical material there is great freedom and spontaneity, and the childish fancy is skilfully appealed to by striking anecdotes and illustrations.

There is space only to give the names of a few other biographical compilations, which are of general excellence and can be consulted or read with profit by young people, — *A Score of Famous Composers*, by Doll; *Makers of Music*, by Sharp; *The Great Composers*, by Bourne; *Masters of Music*, by Chapin; and others.

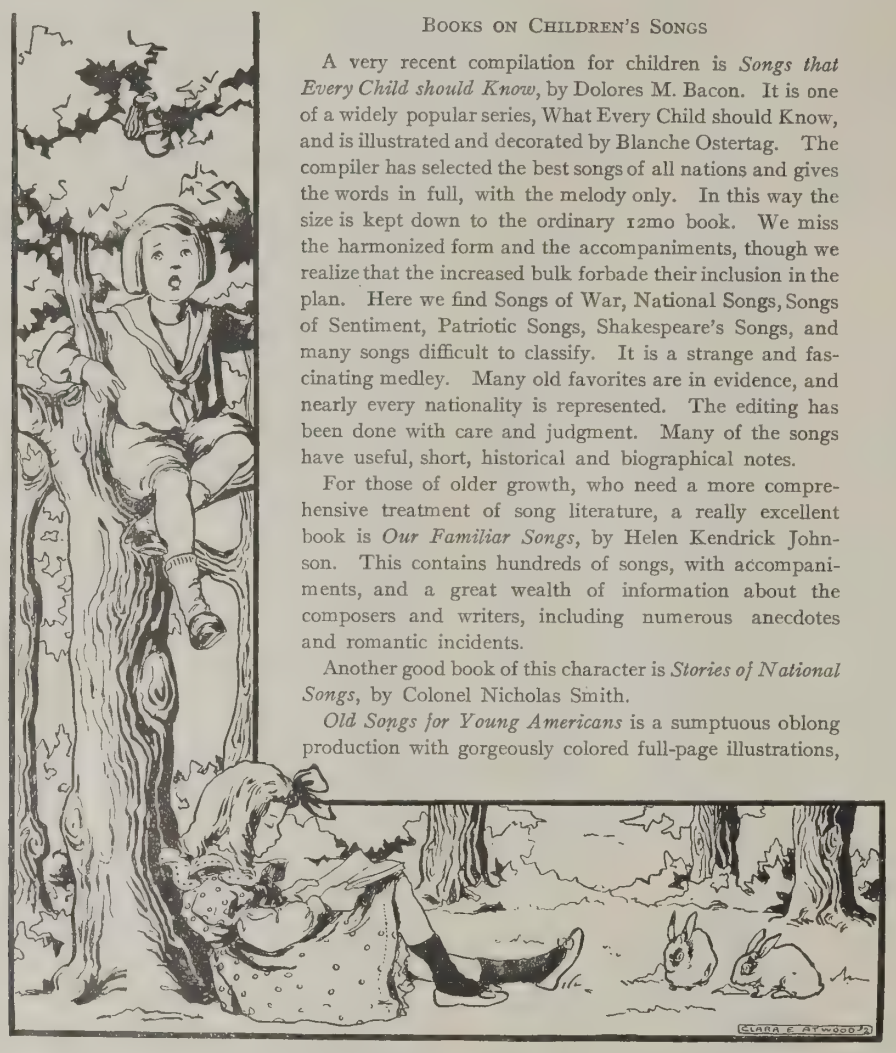
A Group of Biographical Books

The Great Composers, by Hezekiah Butterworth, is the compilation of a well-known juvenile writer, for many years an editor of *The Youth's Companion* and a great

favorite with its readers. It has a number of well-told stories about the great musicians, but its greatest novelty is the inclusion of some sketches of the older American musicians and an account of some American national songs.

A unique production in musical literature is *The Young Folks' Musical History Club*, a story by George H. Rowe, which pictures the doings of a club of young people formed for the purpose of studying musical history and biography. Their proceedings are detailed with great zest and lifelike fidelity, and much solid information is woven into the text as the story goes along.

Miss Hannah Smith, a successful New York music teacher, has edited a volume of biographical papers called *Founders of Music*, in which, beginning with Palestrina, she reviews concisely the lives of noted composers down to Wagner. It is the outcome of personal work in instruc-



A TITLE-PAGE BY CLARA E. ATWOOD

Books on Children's Songs

A very recent compilation for children is *Songs that Every Child should Know*, by Dolores M. Bacon. It is one of a widely popular series, What Every Child should Know, and is illustrated and decorated by Blanche Ostertag. The compiler has selected the best songs of all nations and gives the words in full, with the melody only. In this way the size is kept down to the ordinary 12mo book. We miss the harmonized form and the accompaniments, though we realize that the increased bulk forbade their inclusion in the plan. Here we find Songs of War, National Songs, Songs of Sentiment, Patriotic Songs, Shakespeare's Songs, and many songs difficult to classify. It is a strange and fascinating medley. Many old favorites are in evidence, and nearly every nationality is represented. The editing has been done with care and judgment. Many of the songs have useful, short, historical and biographical notes.

For those of older growth, who need a more comprehensive treatment of song literature, a really excellent book is *Our Familiar Songs*, by Helen Kendrick Johnson. This contains hundreds of songs, with accompaniments, and a great wealth of information about the composers and writers, including numerous anecdotes and romantic incidents.

Another good book of this character is *Stories of National Songs*, by Colonel Nicholas Smith.

Old Songs for Young Americans is a sumptuous oblong production with gorgeously colored full-page illustrations, in which the artist, Blanche Ostertag, has displayed decided gifts of imagination and inventiveness. The music, harmonized by Clarence Forsythe, has been specially arranged for little piano players.

tion and lecturing, and therefore represents the ideas of one in practical touch with youthful needs in this line. The illustrations might be more attractive to the eye, though they have the quality of faithfulness to the originals.

Perhaps the most inexpensive of all the volumes of this class is *Stories of Great Musicians*, by K. L. Scobey and Olive B. Horne, in the series called Eclectic Readings. This is made for use in public school work, and will commend itself especially to the large class of school teachers. Like most school books of our own day it is printed in large, inviting type and very prettily embellished with pictures. Dull, indeed, must be the public school pupil who does not respond to its appeal.

We may mention another volume, not for its literary originality, but for its unusual illustrations, *Musicians and Their Compositions*, by J. R. Griffiths, a London organist. Only six masters are treated, but the pictures include a number of houses, statues, and other scenes, which are not generally found in such books.

A notable series in German is called *Life Stories for Young People*, and embraces noted men in every walk of life. Three musical geniuses have been included so far, —Bach, Beethoven, and Mozart. The one on Bach is by Ludwig Ziemssen; those by Beethoven and Mozart, by Franz Hoffmann. They are all translated by George P. Upton. They are written in the highly imaginative German style, but this will not harm the youthful reader, and the romantic atmosphere given to the stories makes them fascinating reading.

Wagner Books for Children

The tempting theme of Wagner literature has not been overlooked by the makers of children's books. One of the first and the most widely circulated volumes of this kind was the *Wagner Story Book*, by W. H. Frost, who describes his book as Firelight Tales of the Great Music Dramas. A little girl is sitting with the author before the fireplace and looking into the fire. As they gaze into the depths of the flame they see wonderful things taking place, and the author tells the strange stories of the Wagner legends in a winning way. He has enriched the narratives with original ideas of his own, and in a luminous and graceful way has brought out lessons of truthfulness, beauty, and goodness.

Another Wagner writer whose books have met with very general acceptance is Anna Alice Chapin. She has three volumes in this field to her credit, — *The Story of the Rhinegold*, an account of the four parts of the Nibelung Ring; *Wonder Tales from Wagner*, embracing *The Flying Dutchman*, *Tannhäuser*, *Lohengrin*, *Tristan and Isolde*, the *Mastersingers;* and *Wotan*, *Siegfried*, and *Brünnhilde*, which is a more detailed study of these characters on both the literary and musical sides. Miss Chapin has been very fortunate in conveying the atmosphere and spirit of Wagner's creations, and has arranged in a compact and readable form the more or less involved plots of the music dramas. She has woven the incidents in each into a well-connected story, narrated with charming simplicity.

Constance Maud, an English writer, is responsible for two Wagner children's books, entitled respectively *Wagner's Heroes* and *Wagner's Heroines*. She tells us frankly that Wagnerites and other learned persons are not to read them, as they are intended only for the little people. The old tales are recounted with great enthusiasm and sympathy. Unfortunately the illustrations are not up to the level of the text, being deficient in conception and execution.

Mr. Frost and Miss Chapin have had a number of followers in their special line of research, among whom we may mention Mrs. Guerber's *Stories of the Wagner Operas* and Mr. McSpadden's *Stories from Wagner*.

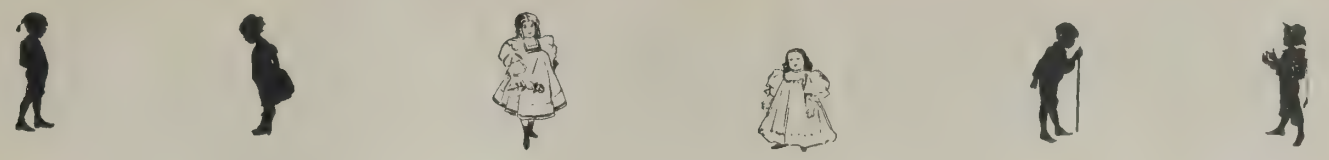
Works of Instruction

The Musical Journey of Dorothy and Delia, by Bradley Gilman, expounds the rudiments of music in the form of a fanciful, interesting story. The scale, the notes, and the various signs are very ingeniously brought into the tale, and the illustrations, picturing in black and white different characters, clefs, crotchets, etc., in the text are clever and full of humor. The two little girls have a wonderful trip through Music-land and pick up a great lot of musical learning on the way. Youthful pupils will enjoy following them in this true and faithful account of their doings.

In the same class is *The Story of Major C and His Relatives*, by Grace Shaw Duff. These are lessons in harmony for a little child arranged as an account of a military man and his family. The different notes and keys have all fanciful names, and the author has shown how they are related to each other and how each has its proper place and work in the harmonic world. It is not an easy task to make the science of harmony plain even to adults, but the author has by her allegorical treatment overcome some of the most distressing and baffling features of the science. Its simple and elementary presentation of the facts owes its present shape to the author's own need of such a book in teaching. In striking contrast with the ordinary opinion, she thoroughly believes that children can be trained to understand the rules of harmony at a very early age.

F. H. Shepard, the author of a number of musical text-books, has devoted one of them to the subject of *Children's Harmony*. This is not cast in the shape of fiction, but is a serious treatise adapting the material to the needs of young piano students. It is simple and thorough, without being childish. The main objects are the thorough treatment of scales, keys, signatures, and intervals, the teaching of chord construction, the discarding of arbitrary rules, and the development of the perceptive faculties, or the gift of hearing accurately. The last end is effected by a series of exercises in dictation, which trains the learner to listen intelligently to music, to recognize melodies, distinguish between the different chords, and write down what is heard in music notation. It is specially intended for those numerous piano students who are not able to take an extended course in harmony.

Musicians in Rhyme for Childhood's Time is a collection of original verses or rhymes in which the main facts about the composers are set forth in poetic style. The verses are unequal in merit and occasionally the muse falters, but this will not probably trouble the childish critic, whose eye will be taken by the broad, smooth page with its pretty printed characters and the fine large pictures showing some characteristic scene in the life of each composer. The authors are Rebekah Crawford and Louise Morgan Sill, and the illustrator is Albert D. Blashfield. No doubt the rhymes will help to fix in some children's minds the personality and circumstances of the tone poets portrayed.



NOTES

A recent issue of the Boston *Transcript* contains a letter from M. Vincent d'Indy. He writes, "What is to prevent Americans from having orchestras, singers, and pianists of their own nationality, educated in the United States by means of solid musical instruction given in schools and universities?"

Monsieur d'Indy visited the Institute of Musical Art during his stay in America, and found there, he says, an institution whose very purpose it is to bring about the conditions of which he writes.

The violin department of the Institute has received a valuable addition by the engagement of Carlos Hasselbrinck, who is well known and well remembered by all patrons of opera as the *Concertmeister* of the Metropolitan Opera House, under Dr. Leopold Damrosch, Anton Seidl, and Walter Damrosch.

Mr. Hasselbrinck is a representative of the French and Belgian schools of violin playing, and will supplement effectively the high order of training which is given to the violin students of the Institute under Mr. Kneisel's supervision.

* *

Spokane is to have a symphony orchestra, under the direction of Hans Dressel, recently of Detroit, Mich., who will make his home there in the future. Mr. Dressel says: "We have plenty of violins in Spokane, but expect some difficulty in securing viola and double bass players. It is my intention to limit the orchestra to stringed instruments at first, with the exception of a flute player. Then, as we progress, we can secure wind instruments from among the professional players in the city."

* *

Spokane has been invited to take part in the May music festival, which will be held at Bellingham next May. A letter from Montgomery Lynch, secretary of the organization, says the festival is to continue three days and will be participated in by choral organizations from Seattle, Tacoma, Portland, Everett, Walla Walla, Vancouver, Victoria, and other cities of the Northwest.

* *

The Royal Conservatory in Stuttgart has in its forty-ninth school year (1905–1906) an enrolment of 542 students, of whom 192 (78 male and 114 female) are advanced students, while the remaining 350 are beginners. Of this total number, 340 are from Stuttgart, 109 from around Würtemberg, 26 are from other parts of Germany, while the remaining 67 are foreigners. The faculty consists of 32 male instructors, 6 female instructors, 1 male assistant, and 6 female assistants. The Conservatory consists of an artist's school and an amateur's school. The following works are among those presented in the programs of the Conservatory: Brahms, *Naenie, Klavierkonzert*, D minor; Reger, *Choralvorspiele, Lieder;* S. Bach, Motette, *Jesu, meine Freude;* Piano Pieces by Couperin and Rameau; Ph. E. Bach, *Phantasie*, C major. The directors are S. de Lange and Max Pauer.

* *

Doris Böhme, the pianiste, died recently in Dresden.

* *

Manager Rudolph Aronson is just in receipt of a communication from Leoncavallo, in which the maestro takes exception to a letter published in the New York papers, October 12.

Among other things the maestro emphatically denies the statement regarding performers at the Scala, Milan, "that the players are simply engaged for the season, and that when the theatre is closed no one who has played there can claim to be a member of La Scala Orchestra."

Maestro Leoncavallo assures us that all the members of his orchestra now on tour in this country have played at the Scala, Milan, and hence the management has the perfect right to announce that fact to the public. Furthermore, the excellence of the orchestra was duly attested by Dr. Mück, the new conductor of the Boston Symphony Orchestra, who was present at the Leoncavallo concert on Sunday evening, October 21, at Symphony Hall, Boston, and also by Mr. Philip Hale, the eminent critic of the Boston *Herald*, who had this to say on October 22:—

"The orchestra played with color and elasticity. The strings were warm, and various solo passages for wind instruments were well phrased by the respective players. There was much greater precision and a finer sense of rhythm than we had been led to expect."

* *

The following program was performed at the Church of the Evangel, Harberth, Pa., October 22, by Mr. Stanley T. Reiff, organist, assisted by Miss Marian S. Merriman, soprano: —

Allegro Moderato e Pomposo.....*Henry Smart*
English
Cantilena.....*Clifford Demarest*
American
Aria: Orchestral Suite in D.....*J. Sebastian Bach*
German
Soprano Solo: Fear not Ye, O Israel....*Dudley Buck*
American
Hymn of the Nuns.....*Léfebure-Wély*
French
Gloria in Excelsis: Twelfth Mass..*W. Amadeus Mozart*
Requested German
Soprano Solo: Tarry with Me, O My Saviour.....
.....*Edna R. Park*
American
Adagio: Second Organ Symphony.....*C. Marie Widor*
French
Lohengrin: Introduction to Third Act..*Richard Wagner*
German

* *

The Institute of Musical Art began its second year on Monday, October 15. The enrolment of students continues daily, and the old Lenox Mansion will be taxed to its full capacity to receive the school waiting to begin study.

In consequence of the wonderful success of M. Alfred Giraudet with the opera class of last season, it has been found necessary to secure his services this year for almost all of his available time.

Students preparing for an operatic career realize that this is the finest opportunity in the world for the thorough study of opera singing and acting. Until M. Giraudet came to America — America went to him in Paris.

* *

At St. Clement's Church, Philadelphia, the following organ program was recently played by S. Wesley Sears (George Dundas, tenor, assisting): —

Symphony No. 5.....*Charles Marie Widor*
French, 1845–
Tenor Solo: The Mighty God hath Spoken.....
.....*Henry Lincoln Case*
Fugue in B Minor.....*Johann Sebastian Bach*
Tenor Solo: I will call upon the Lord....*S. Wesley Sears*
Fantasie Overture.....*George Mursell Garrett*
English, 1834–1897

* *

The Boston People's Choral Union opened its tenth season Sunday afternoon, October 21, at Jordan Hall, with the largest attendance it has ever had. The old members reassembled together with those of the graduates from the elementary classes, who, by a year's study, have earned their way to advancement. A very large number also applied to take the voice test, and were admitted.

The Creation was taken up and sung with marked expression. Two concerts will be given this season, *The Creation* in January, and Handel's *Samson* (which has not been rendered in Boston for many years) at the April concert. Samuel W. Cole is the director.

* *

F. B. Cauvelt Williams of Newark, N. J., has been appointed organist and choirmaster of Grace M. E. Church, Harrisburg, Pa., from November 1, succeeding Henry Eyre Browne.

* *

Eugen d'Albert, the pianist-composer, will give a series of five historical concerts in Berlin this winter, the subjects for which are as follows, "The Period from Couperin to Mozart"; "Beethoven — seven sonatas"; "The Romanticists — Schubert, Weber, Mendelssohn, Schumann"; "Chopin and Liszt," and "The Period comprising Masters altogether Modern, from Brahms to Tausig."

DR. DAMROSCH'S NEW CHORAL CLASS

The People's Choral Union of New York City, which was founded by Dr. Frank Damrosch fourteen years ago, has established a new singing class on the upper East Side. The sessions of the new class, which Dr. Damrosch opened personally not long ago, will be held on Sunday afternoons in the Imperial Lyceum Hall, Third Ave. and Fifty-fifth St.

PEOPLE'S SINGING

In a very beautiful sermon by the Rev. H. C. Shuttleworth, preached at a festival of choirs in King's Chapel, Cambridge, he says under his final head: —

"That the music of our English service is not merely or exclusively the share of the choir. The offices of the Prayer-book are constructed upon a congregational principle; and the people have their appointed place, their share in psalm and canticle, their response and antiphon. Artistic music of the highest order, the best work of the best composers, rendered in the best possible manner, with every aid that art can add, — this has indeed a place, and a chief place, in the worship of our sanctuary. But this is not, and at present cannot be, congregational. It is confined to trained and disciplined musicians. But room must be left for the singing of those whose musical faculty exists, though untrained and undeveloped; they are the great majority of our congregations; and the plain chants and simple hymn-tunes in which they can join, should be supplemented indeed, but on no account ousted by music of the more artistic, or of the cathedral type. I have often wondered why we have not instituted occasional practices for the congregations. Many would surely be glad to remain after service on a Sunday evening and try over the psalms and canticles and hymns for the succeeding Sunday. The day might even come, when the chorales, so largely introduced by Bach and Mendelssohn in their oratorios, should be sung, as those great composers intended, by the people as well as by the choir. Let the people assert their right to their part in the music of the congregation; and do their best to learn so to exercise that right as to be a joy, and not a hindrance and an annoyance to their fellow-worshipers.

The Apollo Club of Chicago, Ill., Harrison M. Wild conductor, will produce during the coming season Elgar's *Dream of Gerontius*, Handel's *Messiah*, Liszt's *15th Psalm*, and Bach's *St. Matthew's Passion*. Ellison Van Hoose will be the tenor soloist for the *13th Psalm* and the *Dream of Gerontius*.

THE DUNNING SYSTEM

of IMPROVED MUSIC STUDY *for* BEGINNERS

It matters not as to which musical system was originated first, but rather which is the best. The Dunning System is the only one endorsed by the world-renowned masters of music in both America and Europe, and its superiority is acknowledged by all who know of the marvelous results shown by the teachers now using it.

Normal Training Class in Oakland, Cal., Nov. 1906

Send for booklet with written endorsement of Leschetizky, Scharwenka, de Pachman, Busoni, and others. Address,

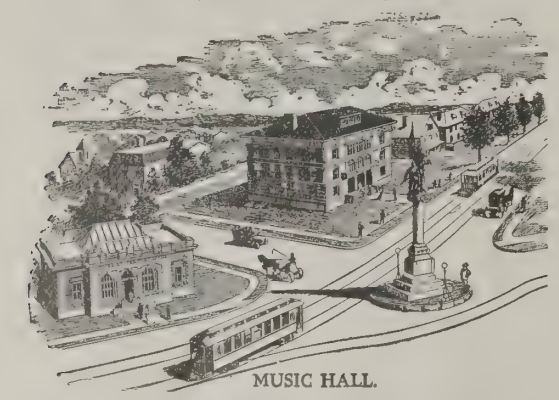
Mrs. CARRIE L. DUNNING, 225 Highland Ave., Buffalo, N. Y.

This system is not taught by correspondence, as it is a musical education in itself.

THE NILES BRYANT

School of Piano Tuning

Founded in 1898, became a State Corporation in 1906.



MUSIC HALL.

Music Hall, the home of the Niles Bryant School of Piano Tuning, is the largest building in the world devoted solely to the teaching of a single profession by correspondence. This great property is owned and occupied exclusively by this School.

PIANO TUNING PAYS.

Our Graduates Earn $5 to $10 per Day the Year Round.

If you are receiving less, we can double your earnings. We teach PIANO TUNING, REGULATING, VOICING and FINE REPAIRING in **One Practical, Easy and Complete Course.** After two or three months of leisure-hour study at home, you can begin to **earn money** by tuning, voicing, regulating and repairing pianos. When you have finished our **easy, thorough** and **fascinating** course, the Niles Bryant School of Piano Tuning will grant you a **Diploma,** accepted the world over as proof of proficiency.

Niles Bryant, President.

The TUNE-A-PHONE, our exclusive patented invention, makes learning **quick, accurate** and **easy.** By its use and our **clear, personal** correspondence instruction, **Any One Who Can Hear Can Learn to Tune.**

The Tune-a-Phone in Use.

The ACTION MODEL, repeatedly regulated and repaired by the student under our direct personal supervision, teaches the student how to regulate any piano, and how to repair every mishap which may occur to a piano action.

We Supply FREE to each student, a Tune-a-Phone, a full-sized modern upright **Piano Action,** also all necessary **tools.**

Many Professional Tuners study with us to perfect themselves in their art. Scores of musicians take our Course that they may be able to care for their own instruments. But more take our Course **as a sure means to MONEY-MAKING.** We fit our students to command splendid profits in **the pleasantest of professions.** Read what some of our graduates say about it.

Have made as high as $17 a day, but have every hope of making more. JOSEPH F. STROEHLEIN, 791 Park Ave., Brooklyn, N. Y.

In less than one week I took in $47.50 tuning, without neglecting my pastoral duties. (REV.) L. L. LUSK, McLean, Texas.

Took up your Course Dec. 14th, 1905. Tuned first piano Jan. 13th, 1906, for which I received $3. Have since earned as much as $12 for six hours' work. FRED NORMAN, 1474 Woodward Ave., Detroit, Mich.

$500.00 would not tempt me to give up the knowledge I gained from your school. ZELL POLLACK, Limeridge, Wis.

I can now tune four pianos a day. I receive $2.50 each, so I make as high as $10 for a day's work. WELLINGTON R. REID, Elgin, Ill.

I get more tuning than I can do. I owe my success to your school. W. J. CORCORAN, Elmira, N. Y.

I can easily earn $75 to $100 per month tuning. (REV.) J. B. SCHWIETERT, Grinnell, Iowa.

The Niles Bryant School is everything that it claims to be. Yesterday I made $8.90 tuning and repairing pianos." ERVEN S. HUNT, Greenville, Ohio.

OSSIP GABRILOWITSCH

Surely, there is a plethora of pianists coming from foreign shores hitherward this season; and as one reads the list, one is struck with the idea that Russia, amid all her interior turmoil, is doing much for the peace of the rest of the world in sending forth her musicians and pianists to proclaim the glad tidings and peaceful messages which harmony and music always bear,—Gabrilowitsch, Paderewski, Szumowska, Lhevinne, Safonoff, Petchnikoff, and others; and while two of these are Polish, it is true, still, by name, temperament, and tradition they are not far remote from Russia. The arrival of none will be awaited with more genuine interest than that of Gabrilowitsch; he has been among us twice before, his last visit being now three years ago, and he made a very deep impression upon the musical life of the country. A genuine musician, a sterling character, a natural and educated pianist, a composer, an orchestral conductor, a man whose nature gives expression to its artistic calibre in all that he does, a man whose many-sidedness yields him a welcome companion to all fine-minded men, and, in a word, a nature so throbbing with humanity that all who come into his presence feel immediately *con amore* with him.

The playing of Gabrilowitsch, like the man's nature, is round, broad, full of sympathy, romance, and charm; his tone is luscious and he knows how to sing. His playing is an appeal to the best that is in one; and this is a great point, for, as a result, hearing Gabrilowitsch is uplifting in its effect to a very remarkable degree, and one comes away from his recital feeling as happy and as joyous as the bobolink in the meadows when early spring paints the reeds and grasses their rarest and tenderest green; and not only happy, but also more restful, calm and secure in the goodness which pervades all things.

The playing of any man is, after all, but the outward expression of his innermost self, and it naturally follows that the deeper, the finer, the broader and bigger the man, the more complete and satisfying and ennobling his playing.

In these days when so many persons are being brought up, so to speak, on pianoforte music rendered by mechanical means, the playing of a great pianist stands forth in clearer outline than ever before. The spirit which built the old cathedrals, the spirit which led each member of an entire community to give his individual effort in the making of these grand monuments of human achievement, the spirit which so imbued the entire structure as to render it a permanent and benign influence for mankind, — this spirit can never be found in mechanical devices; it matters not how ingenious, how well-nigh perfect a mechanical device may be, or how worthy (and indeed they are worthy, as no one will deny), it matters not how absolute the delicacy with which a mechanical device is made; it cannot, never has been, and never will be capable of exerting an influence so beautiful, so noble, so uplifting, as that of a rightly adjusted human being. So it is with piano players and pianists; the deeper and profounder, the more beautiful the nature of the individual, the more beautiful, the more spiritual, and the more lasting in effect will be what comes from him or, in a word, his playing. A man who is led by material thoughts in his everyday life may startle his hearers from the platform, but truly he cannot raise them to such heights, reveal to them such glories, and give to them such elevating tendencies as he whose nature lives and moves and has its being, off the platform as well as on, amid best and purest conditions. Unselfishness, patience, capacity for sacrifice, power of endurance, purity of thought, purpose, and action,—all these are shown forth by the playing of an individual, just as plainly as they are by his life. All these and many more human qualities are evinced in the playing of a great man, and surely the reason a great audience is carried away by the work of one pianist rather than by that of another is because, consciously or unconsciously, it is impressed by these and kindred qualities. The audiences of Gabrilowitsch invariably go away from the hall feeling better and wanting to hear more, and thus it is that he is so pleasantly remembered by the musical community of America.

EDWARD MACDOWELL

As we announced some time ago, Edward MacDowell, America's most distinguished musical son, has experienced a complete breakdown. Not merely his physical, but sadder still, his mental health has entirely given way, and although it is quite possible that he may live for years to come, there seems at present but little hope that he will ever be able to resume his place in the ranks of the world's workers. It is terribly sad. Not yet forty-five, this man of delicate and original talent, of sensitive and refined nature, is laid by in what should have been his prime, and will from henceforth be absolutely and entirely dependent upon the care of others. Ardently devoted as he has been to the cause of music, it is said that the failure of his efforts on its behalf, and the neglect of his own people to appreciate his point of view and the character of his work, have all combined to bring about this catastrophe.

Now that irreparable mischief has been wrought, his fellow-countrymen are beginning, however tardily, to make amends. A band of enthusiasts have associated themselves together under the name of "The MacDowell Club," with the avowed object of calling attention to and arousing interest in the compositions of Edward MacDowell. However appropriate and desirable that may be, there is, however, yet something more which is practical and necessary. MacDowell, as age goes nowadays, was but a young man, and though of late years he doubtless enjoyed a comfortable income, he could hardly have been able to make much provision for the future, considering the cost of living in America. His compositions were not of that popular character which would cause them to sell by the hundred thousand, and he had never condescended to write pot-boilers. The Mendelssohn Glee Club of New York has therefore taken the matter in hand and started a fund to provide for the support of the helpless composer, under the very proper impression that bread during his lifetime is very much better than a stone after his death, and a very much more practical method of showing appreciation of his work. That the fund will be a success we do not doubt. MacDowell's music may not appeal to millionaires, and appreciation is generally a plant of slow and uncertain growth, but if America is avid in pursuit of wealth she is not usually miserly in her distribution of it when occasion calls. We feel sure that the Mendelssohn Glee Club will not be disappointed with American generosity. Had it occasion to be so, then indeed there would be a blot on the 'scutcheon of the United States, for in the world of music Edward MacDowell is known outside her broad boundaries as a distinguished scion of art.—*From the London* (*England*) *Musical News*, *Aug.* 18, 1906.

W. J. HENDERSON

A book of the greatest value and importance to all singers and lovers of singing is *The Art of the Singer*, by William J. Henderson, just published by the Scribners. In his sub-title he calls the work "Practical Hints about Vocal Technics and Style," and it is intended for the aid and instruction of professional singers as well as amateurs. Mr. Henderson is at present the musical critic of the New York *Sun*. He is a graduate of Princeton in the class of '76, and was for nearly twenty years on the staff of the New York *Times*. His experience as a critic, and his intimate acquaintance with the greatest singers of our day, gives to his ideas and suggestions exceptional weight and value.

PRACTICAL QUESTIONS IN ELEMENTARY TEACHING

ANSWERED BY W. S. B. MATHEWS

F. L. B. — "I would like to ask why the very numerous practice forms of scales and arpeggios given in the revised Mason's *Technics* are necessary now, when scales and arpeggios occur so rarely in the best music for the pianoforte? There was a time, when Dr. Mason was young, that such figures formed a large part of the so-called 'pianistic' effect. But in the newer music we do not find them any more than we found them in the earlier music of Beethoven. Why then continue to practice them?"

As practice material, scales and arpeggios stand upon their importance as customary keyboard tracks, along which running work, figural work, and even melody travel, either faster or slower. The scale has an even greater importance as practice material, in this, that it is meant to form the hand habit (and the mind habit) of continuing along strictly within the key of the signature, without thought upon the player's part. The good player "sets himself" as he begins a piece, in a particular key; he continues within this key without further conscious thought just as he continued upon the sidewalk in going down street, although he may be all the time conversing earnestly with a friend. When the music modulates, he returns again to the original key the moment the modulatory passage is completed. Scale practices are very useful for this.

It is curious how progress has contrived to give Dr. Mason's very interesting and clever invention of the finger changes from diminished seventh four-note chords an importance even greater than when he invented them fifty years ago. Some witty writer dated the romantic school from the vogue of the chromatic scale and the diminished seventh, and it is a fact that these two elements play a far greater part in modern music than they used to. Now, these arpeggios employ the four fingers over and over, and are therefore better practice material for evening up the fingers than triad arpeggios, which skip one finger in every octave. This exercise is also indispensable to the pianist, but the other affords the fourth finger a better chance. It was one of Mr. B. J. Lang's clever sayings, apropos to the use of scale practice for the general work of finger strengthening, that "a man had five children. One was tall and strong (here he pointed to the third finger); another was not so tall, but very clever (here he pointed to the second finger); a third was underwitted (the fourth finger), and another a fool outright (the fifth). Now, would you believe it? The gentleman kept the fool out of school all the time except Saturday afternoon; the underwitted one went one day a week, while the smart ones went every day." It was a clever saying, a pseudo demonstration, according to which one could prove anything one took care to lay out the lines for.

Seriously, while the Thalbergian running work above a sustained melody in long tones, has been driven out by the superior vibratory qualities of modern pianos, making it impossible to keep this running material free from confusion, it is true, nevertheless, that fluent fingers are still necessary. If you ask me what I think, I will say that I consider these forms elementary in nature, and for the present I see no good way of dispensing with them. But the technique of the future, the advanced technique, is likely to be much more subtle and elusive — perhaps like that in the Chopin-Godowsky studies, where marvelous fluency combines with extreme refinement and subtlety of touch. Meanwhile the young have to work a lot at scales and arpeggios.

L. J. B. — "My first teacher (who studied with Dr. Mason) insisted upon my playing the closing tone of the short phrases of two tones, in the first Intermezzo of the second *Kreisleriana*, with the Mason 'finger elastic' touch; *i.e.*, with an extreme finger elastic staccato. He did the same in the short phrases of the middle part of Dr. Mason's *Danse Rustique*. In both it seemed to me too short. What do you think?"

From your account there is one element missing. If your teacher had reported in full Dr. Mason's directions, he would have remedied the too short, the "stubbid" effect mentioned, by using the pedal briefly upon the second tone.

Personally, I doubt whether a really fine player would now employ the full finger elastic touch in closing any kind of a phrase. It always sounds too abrupt, the final tone is too vital, — a quality inseparable from this kind of finger effort. Therefore I would not use so complete a staccato. I notice that Mr. Joseffy still makes use of this finger elastic in sustained melody, just as he used to do in giving out the melody of the adagio of the Chopin first Concerto, — a proceeding which staggered the technicians at the same moment that the elasticity of the effect pleased their ears. Joseffy covers up the break with the pedal. I do not think that the later pianists would advocate the use of this extreme staccato anywhere but in places where a very short and emphatic effect is wanted. This is a change of the times. Fashions change. Personally, I very much dislike the phrasing rule given by several writers, of always closing a phrase with a staccato tone. There is no such rule. Even in cases like those cited at first, or in the short phrases of the Introduction to Beethoven's *Sonata Pathetique*, the phrases do not close with a jerk, — *i.e.*, with an extreme finger staccato.

Nevertheless, this exercise is an extra good one for the hand, and it is for its gymnastic value that we continue it.

B. O. — "Which form of the Mason Two-Finger exercise do you consider on the whole the best? And which method of practice, with arm touches, finger elastic, or what? I find in several edited copies of Schumann's works that chords are directed to be played with a hand motion. What do you say?"

I say it all depends. Such chord successions as those in the first idea of Schumann's *Grillen* are indeed played by a hand motion, but not by an original hand motion; the principle is that of the fast octaves as illustrated in Mason. Only at the eighth chord a climax occurs which can be produced solely by the use of arm force.

As for the two-finger exercise, it depends upon what one is after. My own method of arriving at vigorous, sensitive, and musical chords is to require six different ways of practice as given in the *Technics* (pages 83 and 84). All heavy chords employ the arm element, but the manner is liable to be either one of the three (triceps, bounding, or falling) according to the connection. Practically they are equivalent.

I consider the four manners of playing the two-finger exercise of equal importance for practice, and in my opinion when the four are invariably practiced in succession the result is a responsive, a strong, and a capable hand. When I am after chord improvement I use thirds, then sixths, and finally the chord exercises. And for developing flexibility and responsiveness in old and "starchy" hands, the two-finger in double sixths is an extremely valuable form (p. 46). For a young hand, after the forms in the scale, give the chromatic forms and those in broken thirds. Later the double thirds.

I strongly advise every young teacher taking up the Mason System newly in teaching, to read the volume through regularly once a month during the first year. You will be surprised at the number of good ideas you will discover at each reading which you will not remember to have observed before. Technique is a pretty large subject, when you are building to make strong and musical players.

It doesn't matter so much *what* the exercise form; it is always the *How*.

L. J. — "In Mr. Tapper's *Graded Studies*, Grade II, p. 10, I find some eighth notes chords repeated, which are marked with staccato dots. How ought these chords to be played? With finger staccato, or how?"

Our edited music is full of this sort of thing, where marks are left in which perhaps the composer put in while thinking of some violin effect. These dots over the repeated chords mean absolutely nothing at all. The speed at which the chords repeat precludes employing anything but the usual hand motion (responsive wrist) and all that is wanted is a clear and crisp repetition. Simply play them so you can hear them, and there you are. If anything were to be added for the sake of these dots, let it be simply a slightly greater motion (rise of hand) between the chords. The Heller studies are full of this sort of thing, in places where nothing really is meant.

MARY. — "I would like to ask how you think the short phrases in the Duvernoy study, p. 11, of Mr. Tapper's Grade II, should be played? Should the final F of the first phrase be staccato?"

I consider the notation of Duvernoy to be elliptical in its nature. While I would remove the finger from the F when it had completed its time, I would also use the pedal for the accent, and continue it perhaps one beat or just a little more (*i.e.*, one eighth note or two). The left hand notes are answers, but not melodic. In this way you hear more melody than the notes show.

A. S. — "I observe that Mr. Tapper directs that the accompaniment to Reinhold's *Fairy Picture* (Graded Pieces, II, p. 9) should be held out its full time; whereas another edition I have advises to release the accompaniment fingers before the melody ceases to sound. Which is right?"

Both are right. Mr. Tapper wrote of the musical effect desired. The other editor wrote with reference to the hand habit of resting (or "riding") upon the melody key and playing the accompaniment with less weight of hand. For elementary practice it is useful to close the chord before the melody tone finishes, in order to observe more carefully its connection to the next melody tone. When this is elegantly done, then the melody tone and its chord do indeed close together; but with a difference, that the melody tone still holds on legato and connects perfectly to the next, while the chord is succeeded by a rest.

LONDON LETTER

ORTON BRADLEY

Of all the items of news that have appeared during these early weeks of the season none have been greeted with more general interest than two announcements which both have to do with the lighter side of operatic music. The first is that the Savoy Theatre will shortly be opened by Mrs. D'Oyly Carte with revivals of the Gilbert and Sullivan operas. The first opera will be the *Yeoman of the Guard*, and will be performed December 8. Each opera will be played for as long a run as possible. It would almost seem as if a better policy would be to play each for a week or two, at most, and revive it again later if it proved a very popular success. François Cellier will be the conductor, and everything is to be done in accordance with Savoy tradition.

The second item is that David Bispham is on the point of producing Liza Lehmann's opera *The Vicar of Wakefield* for a few weeks in the provinces, and then in London. Mr. Bispham, of course, will fill the title-rôle, but there

is no one in the company that is announced to support him who can sing as well as himself, and except Mrs. Theodore Wright (Mrs. Primrose) and Richard Temple, (Dr. Burchell), there is no one in the cast of any great histrionic power. The part of Olivia will be sung by Violette Londa, in the provinces, and in London by Isabel Jay, and Walter Hyde will be Squire Thornhill.

At the Italian opera, which is given at reduced prices some evenings, and has proved most successful, we are shortly to hear Nordica in *Gioconda* and *Don Giovanni* among other operas. It remains to be seen whether the enhanced price for Melba nights will obtain for Nordica. She has not sung at Covent Garden for four years.

The arrangements for the German opera season, which will begin in January, 1906, are now almost complete. Van Dyck, who is the director of the enterprise, has surrounded himself with a remarkably brilliant company, which includes Aino Ackté, Minnie Nast, Litvinne, Marie, Brema, and Agnes Nicholls, Flinhals, the celebrated Munich tenor, Naval, Hinckley, and Dr. Felix von Krause. The only work new to London which is promised is Smetana's *Die Verkaufte Braut*.

Among the forthcoming chamber concerts the prospectus issued by Messrs. Broadwood is most interesting. During the series of twelve concerts, the following quartets will appear, the Capet, Krause, Cathie, Brussels, and Rosé, the latter two quartets being new to London audiences. The London trio, Simonetti and Woodhouse and Amina Goodwin, will give a series of six concerts at the Æolian Hall, during which they will play all the Beethoven trios (with the exception of Op. 11) in chronological order. The Joachim programs are all devoted to Brahms. The other concerts are now in full swing. Sunday concerts are taking place at the Queen's Hall, the Albert Hall, and under the Sunday League at nearly a score of other centres in London. The Pavilion Music Hall is at present being utilized instead of the Alhambra, which will not be ready for Sunday work until after Christmas.

There is little doubt that London music would be greatly benefited by a new concert room to take the place of the late St. James' Hall, and a great deal of discussion is now in evidence as to its possible site. There seems now to be a possibility that the old Hengler's circus may be converted into such a hall. If so, it will be an ideal site.

The first four London Symphony concerts under Richter present programs of such great interest that it is hard to imagine how the standard can be kept up for so long a series. For example, the first concert includes Beethoven's *Pastoral*, Wagner's *Vorspiel* to the *Meistersinger*, Strauss' *Don Juan*, Brahms' D minor Piano Concerto, and Elgar's new *Concert Allegro* (Fanny Davies, soloist).

The London Symphony Orchestra has also been engaged for the German opera season at Covent Garden. The Queen's Hall Orchestra, which has been engaged with Henry J. Wood for the Norwich Festival, 1908, will give a series of eight symphony concerts of an interest in no degree inferior to those of the rival organization. Only three novelties are announced on the prospectus,—Percy Pitt's *Sinfonietta*, Ernst Böhe's *Ausfahrt und Schiffbruch* from his cycle of tone poems illustrating the story of Odysseus, and von Dohnanyi's *Concert-stück* for 'cello and orchestra, with Hugo Becker as soloist. To the rival ballad concerts reference was made last month. The best sign of the times in this connection is that both administrations have seen fit to strengthen the vocal part of their first programs by the addition of a "draw" in the shape of a celebrated violinist. Messrs. Chappell gave their audiences Fritz Kreisler, who, by the way, will play at the seventh Queen's Hall Symphony Concert next February, and the London Ballad Concert was enhanced by the presence of Marie Hall. Among London choral associations the Royal Choral Society still holds the first position. This year's prospectus, however, promises no absolute novelties, but Elgar's *The Kingdom* will be given at the end of the season, March 14. Nor must we neglect the work that many provincial societies have done in past years and still continue to do. Among the rest, no small credit is due to the pioneer work Dan Godfrey is accomplishing with his Bournemouth municipal orchestra, which has recently been enlarged to fifty performers. This season no less than sixty-seven novelties will be performed, and among those who have promised to conduct their own works are Sir Frederick Bridge, Dr. Cowen, Sir Alexander Mackenzie, Sir Villiers Stanford, and Mr. Edward German.

The Liverpool Philharmonic Society, which has been in existence sixty-seven years, is again under the direction of Dr. Cowen. Kreisler is among the soloists at the earlier concerts, and for the third concert, December 4, Dr. Lierhammer will sing and Sarasate will be the violinist. The latter, who is having a very busy season this autumn, is engaged for the first Symphony Concert of the Queen's Hall Orchestra and for Adelina Patti's "farewell" concert, December 1 at the Albert Hall. He is also giving recitals with Carlos Sobrino, who replaces Berthe Marx in the violinist's programs during his tour. Dr. Richter is conducting the Hallé Concerts at Manchester, as he has done for some years. Among other "novelties" at these concerts are two performances of Handel's *Messiah*, December 20 and 21.

Let it be confessed that we are still in a state of prodigy worship. Mischa Elman is still unsurpassed by all the others whose name is legion. The latest is only nine years old and is called Pepito Arriolla. It was Nikisch who discovered him four years ago and sent him to Rekondorff at Leipsic, since which he has also studied with Moritz Mayer-Mahr at Berlin. He played the Beethoven C minor Concerto a few Sundays ago at the Albert Hall. We have also with us Lionel Ovenden, who is equally good (or immature) at both piano and violin, and Vivien Chartres, a violinist; and then there are the three brothers Cherniavski, aged eleven, twelve, and fourteen, who play respectively 'cello, piano, and violin, and are giving a series of recitals. There is very little room left for more of them, yet news comes of a new one with an alien name beginning with a Z, which is not intended to be pronounced, who has been discovered at Westgate playing the violin on the beach. What a pity they cannot all be engaged to play exclusively at the concerts for children which Foxton Ferguson has organized at Steinway Hall! These are a very excellent series of concert-lectures which have been given now for two seasons and are now being resumed. Their object is to train the young listener to proper appreciation of music.

An English pianist in America is not very frequently heard, so it is all the more pleasant to wish a successful début to Katharine Goodson, who will play with the Boston Symphony, Jan. 18 and 19, 1907. Before her departure she has to fill engagements in Scotland, Germany, and Holland. This season is to bring cessation of work to two men, whose names are well known in English musical circles, — Joseph Bennett and Cavaliere Zavertal. The former is resigning his position as principal music critic to the *Daily Telegraph*, and the latter will at Christmas conduct the band of the Royal Regiment of Artillery for the last time. There is no one who will not wish them many happy years to enjoy their well-earned leisure.

English news has taken up so much space that there is little left to devote to continental affairs. Suffice it to say that the autumn opera season has opened at Toulouse, Milan, Venice, Lyons, Besançon, Cologne, Amiens, Bordeaux, Calais, Nantes, Magdebourg, Ghent, and many other centres.

It is curious to note that one of the most popular operas for production this year is Massenet's *Mary Magdalen*, which made so great a success last spring in Paris. Amiens, Bordeaux, Nancy, and Toulouse are all to produce the work. Among other original productions are to be two at Venice, — *Jana*, by B. Virgilio, which will at least be a classic if names mean anything, and *Pane altrui*, by Giacomo Orefice. *Salome*, by Strauss, is the novelty at Milan, and a new work by Cilea, entitled *Gloria*, written especially for the Scala. The season will open the second week of December with Wagner's *Tristan and Isolde*.

The importance of two competitions which are being held in Paris claims for them the distinguished position of a last paragraph. The first competition is reserved for French musicians only. La Ville de Paris offers a prize for a musical work in grand style (*haut style*) in symphonic or dramatic form for solos, chorus, and orchestra. Works to be sent in to the prefecture of the Seine between 1st and 15th of December. The other, which is international and was to have been closed in October, is still open until Jan. 31, 1907, before which date all compositions must be sent to the following address: M. le Secrétaire général du Concours international de musique, 32 rue Louis le Grand, Paris. The prizes offered are 30,000 francs for an opera, 12,000 for an opéra-comique, 8000 for a ballet, 3000 for a trio, and 2000 for a sonata. Apply to the secretary for full information.

ERNEST CILEA

Ernest Cilea is a prominent composer of the modern school, whose opera, *Adrinan Lecouvreur*, is one of the novelties promised by Mr. Conried at the Metropolitan

ERNEST CILEA

Opera House, New York City, this winter. This work met with much success when produced in Milan some four years ago. Mr. Cilea was born in Paris, Sept. 13, 1856.

BOOK AND MUSIC REVIEW

New volumes of the Musicians Library have been published recently by Oliver Ditson Company. *Early Italian Piano Music*, a collection of pieces written for the harpsichord and clavichord, edited by M. Esposito; and *Fifty Shakespeare Songs*, edited by Charles Vincent. Of the latter there are editions for high and low voice.

The piano music is taken from works of Frescobaldi, Rossi, the Pasquinis (Ercole and Bernardo), Alessandro Scarlatti, Pollaroli, Domenico Scarlatti, Durante, Marcello, Porpora, Zipoli, Fr. Martini, Galuppi, Paradies, Turini, Grazioli, and Clementi. The introductory matter consists of pictures of an Italian clavichord of the sixteenth century, a German clavichord of the eighteenth century, an Italian harpsichord of the seventeenth century, and a Flemish one of the seventeenth, with a description of them and of the inherent qualities of the instruments in general, together with very short biographical sketches of the composers represented.

Most of the pieces have been published already in various editions, but the Toccatas of Alessandro Scarlatti, far better known as a writer of operas and songs, are now published for the first time from the original manuscripts in the Verdi Conservatory of Music at Milan. Mr. Esposito says that he has followed strictly the originals in all instances. "I have supplied the marks for expression and speed, for, as every one knows, those old composers only put the mere notes on music I claim no more for my marks of expression than that they were suggested to me by the music, and every one is free to alter them according to his individual feeling." Whenever Mr. Esposito has harmonized a simple aria, as the one from A. Scarlatti's second Toccati, or varied a passage, he has also given the original version.

This volume should interest all pianists, whether they be amateur or professional, although it is not likely that many of the pieces will find their way to the concert room. It is a pity that more public pianists do not seek to vary their programs, and from time to time introduce pieces by the old masters — not in a pedagogic way, not to make up a "historical program" — a peculiarly hideous torture! — but to acquaint an audience with quaint and often charming music.

Dr. Vincent had a wide, an embarrassing choice in the wealth of Shakespeare's songs with the various settings. He has shown a catholic taste in his selection, though one might wish that Verdi's as well as Rossini's *Willow Song* in *Othello* were included. There is first a group of songs mentioned by Shakespeare in his plays, as *Farewell, Dear Love*, and *Peg o' Ramsay*, which were in the mouth of Sir Toby Belch; *Green Sleeves*, *Heart's Ease*, which Peter in *Romeo and Juliet* wished the musicians to play, and a few other of the old songs, with tunes by unknown composers.

A group of songs sung, possibly, in the original performances follows, as: *The Willow Song* and *O Mistress Mine*, by unknown authors, *It was a Lover and His Lass*, by Morley, with songs by Johnson and John Wilson.

The third section includes settings composed since Shakespeare's time to the middle of the nineteenth century, music by Banister and Humfrey, the famous tunes by Purcell and Arne, Bishop and Schubert, and songs by J. C. Smith, Haydn, Vernon, Stevens, Linley, Clifton, Cooke, and Curschmann. This section is followed by the final group of more recent settings by Schumann, Sullivan, Parry, and others, including the American born William A. Fisher, H. W. Loomis, H. Clough-Leighter, and C. F. Manney.

The editor did well in admitting more than one setting of a song. Thus it is interesting to compare the traditional *Willow Song* with the settings by Humfrey and Rossini. Every one knows Schubert's *Who is Sylvia*, but here is the old setting by Leveridge, and the modern one of Monk Gould. We miss Sullivan's *Orpheus with His Lute*, but there are the settings by Messrs. Manney and Busch. There is Schubert's *Hark, Hark, the Lark*, but many will now see Curschmann's for the first time.

Dr. Vincent has written about two pages and a half of introductory matter. He might easily have written a dozen on this entertaining subject, and he is perhaps to be praised for his reticence, for what he has written is neither new nor illuminative, as when he says: "An examination of the music performed in the plays in Shakespeare's time shows us that it must have been simple and melodious, rather than difficult and contrapuntal." Dr. Vincent thinks it probable that the dramatist wrote some of his songs to music which was already in existence and popular at the time, "as many poets have done since, notably Burns and Thomas Moore."

SPECIAL NOTICE TO PIANO TEACHERS

THE SHEPARD SYSTEM provides an Element often lacking in Music Study,—the development of WILL, DETERMINATION, PERSONAL FORCE,—the most potent factor of success. Adapted, and may be added to any method; learned in a few lessons. This POWER TO INSPIRE THE BEST IN EVERY PUPIL is distinct from Musicianship, and a REVELATION TO ALL WHO STUDY IT. Taught personally or by mail. Summer course at Asbury Park, N. J. Booklet.

A TEACHERS' NORMAL PIANO CLASS, covering these principles. First lesson and free Demonstration Recital, Saturday, Nov. 10th.

A HARMONY LECTURE CLASS, Practical, Simplified Harmony, Ear Training, and Analysis, for Pianists, Singers, and Teachers. First lecture free, Nov. 10th. Circulars.

HARMONY BY MAIL. Simple, Practical, Rapid. Specimen Lesson. HARMONY SIMPLIFIED, 10th Ed. On Approval.

SHEPARD SCHOOLS OF MUSIC, 828-829 Carnegie Hall, New York

NEW BOOKS RECEIVED

THE WORLD OF SOUND AND THE WORLD OF SIGHT. Charles Irving Rice. Published by the author at Worcester, Mass. Price, 15 cents.

A pamphlet of sixteen pages on the use and misuse of music terms. The author thrashes out his theory over the back of Mr. Blind and Mr. Deaf. The logic of the situation as presented by Mr. Rice is summed up in these words: —

"I would suggest that we shift our attention from nouns to verbs and seek for a clearer presentation of the subject during the early school years, when we are dealing with its broad aspects, and before we have any call to harvest a crop of 'cancels, chromatics, or accidentals.'"

To which the earnest will add "Amen."

AN APPEAL TO PARENTS. Frank R. White. Published in New York. No price given.

A plea for the proper treatment of the singing voice of the child, and a criticism more or less logically directed to the element of tone production in public schools.

ELEMENTS OF ENGLISH VERSE, CORRELATED TO MUSIC. Alice C. D. Riley. Published by Clayton F. Summy, Chicago. Price not given.

A book of 148 pages, which aims to stimulate self-expression in verse and music. The work abounds in excellent suggestions and is clear in its method of procedure. A most valuable contribution to teachers' text-books.

A MANUAL OF PLAIN CHANT. Rev. Sisbert Burkard, Ph.D. Published by J. Fischer & Bro., New York. Price not given.

A small book of fifty-five pages, the aim of which is to provide those singers that have not had the advantage of a thorough musical training with a text-book that is at once *practical* and *easily intelligible*.

The book is well printed, and its content is admirably set forth.

NOTES

Carlos Hasselbrinck, who is remembered by patrons of opera as a concertmaster of the Metropolitan Opera House under Dr. Leopold Damrosch, Anton Seidl, and Walter Damrosch, has been engaged for the violin department of the institute of Musical Art. Mr. Hasselbrinck is a representative of the French and Belgian schools of violin playing.

* *

There is said to be only one man in Ricordi's publishing office in Milan who has mastered the art of deciphering Puccini's scores. Sometimes the page looks as if a fly had crawled over it; everywhere are weird flourishes and thumbnail sketches and notes, seemingly superfluous, which have overflowed into the margin, and blots innumerable. A specimen of his music writing, taken from the end of *La Bohème*, shows a page covered with illegible notes, and in one corner a large drawing of a skull and crossbones, underneath which is written in large letters, "Mimi."

PIANO PLAYERS
AND PIANO TEACHERS

Do you realize the important part a perfect action plays in the production of the tone and touch of your piano?

It is the mechanism through which you transfer your thoughts and feelings to the strings, and thus interpret the great masters.
To accomplish this your action must be perfect in touch, perfect in repetition, perfect in power.

If your piano contains a

Strauch Bros. Piano Action

it is **perfect in these essentials,** as this **action is found only** in pianos of **quality and merit.**

NOTES

The People's Choral Union of Boston is to revive Handel's *Samson*, an oratorio that is unfamiliar to music lovers of the present generation.

* *

Wilhelm Gericke, late director of the Boston Symphony Orchestra, is now located permanently at Vienna, his old home before his residence in Boston.

* *

Elsa Ruegger, the Belgian 'cellist, will not begin her American tour this season until January, as she will be filling European engagements until that time.

* *

Theodore Habelmann, for eleven years stage manager at the Metropolitan Opera House, New York, has opened a school for opera in that city.

* *

The Loring Club of San Francisco closed its twenty-ninth season recently with a concert at Calvary Church, in that city. The large musical library of the club was destroyed in the earthquake and conflagration of last spring, but already a new one has been started, many Eastern music publishers having donated music to the club. The assisting soloists were Mackenzie Gordon, tenor, and Wallace A. Sabin, organist.

* *

The *Neue Zeitschrift für Musik*, founded by Robert Schumann, has ceased to exist as an independent organ and has become incorporated with the *Musikalischen Wochenblatt*, published by C. F. Siegel.

* *

The Olive Mead Quartet — Olive Mead, Elizabeth Houghton, Gladys North, and Lillian Littlehales — will give four concerts in Mendelssohn Hall on Thursday evenings, beginning in December.

* *

Alfred Reisenauer, the pianist, whose somewhat erratic performances on the piano last season are recalled, has announced that he is to open a class in piano teaching modeled after the famous Liszt Weimar class. Reisenauer is to locate in Leipsic

* *

According to the latest announcement, Paderewski will not appear in the United States this season, although previous statements promised his coming as a "sure thing." His decision not to come this year is perhaps not a matter for surprise, taking all things into consideration.

* *

Mark Hambourg, the strenuous young pianist, is evidently contemplating matrimony, according to report that publishes his engagement to a daughter of Sir Kenneth Muir-Mackenzie of London.

* *

The Boston Singing Society will give two concerts as usual this season, the dates being December 12 and February 27. The society is under the direction of H. G. Tucker, its founder.

* *

The manuscript of Berlioz's symphony, *L'Incendie de Sardanapale*, which was considered lost, has been recently discovered in the Paris National Library by Julien Tiersot. Until now it was believed that Berlioz had destroyed the original score. Its discovery is of especial interest by reason of the fact that Berlioz used a number of themes from this composition in his later and larger works, among others *Romeo and Juliet* and the *Trojans*.

* *

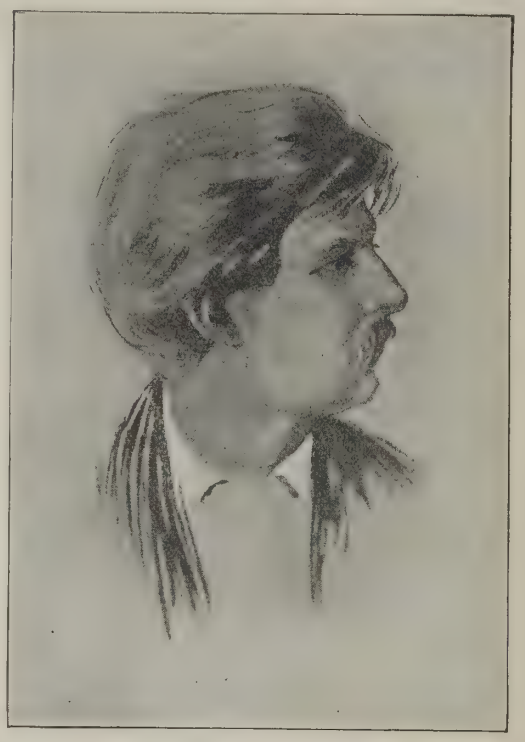
The Arion Club of Providence is giving several fine concerts this season. On November 27 Sir Edward Elgar's *King Olaf* was given, Louise Ormsby being one of the soloists. February 5 a program of part songs will be presented with Ossip Gabrilowitsch as one of the soloists. At other concerts *Elijah*, with Gwilym Miles in the principal rôle, and the *Messiah* will be given with the following soloists: Corinne Rider-Kelsey, Gertrude Edmands, Kelley Cole, and Frederic Martin.

* *

The Cecilia Society of Boston will give its usual three concerts on Dec. 11, 1906, Feb. 26, and April 9, 1907, directed by B. J. Lang. One of the concerts will be a Mozart memorial, and the program will include that composer's *Coronation Mass*, *Te Deum*, and *Ave Verum*, also Michael Haydn's *Tenebræ Factæ Sunt*, Bach's *Magnificat*, and Verdi's *Hymn to the Virgin*. Other works to be given during the season will be *The Children's Crusade* by Pierné, and the late Prof. J. K. Paine's opera, *Azara*, in concert version.

ALEXANDER PETSCHNIKOFF

Alexander Petschnikoff, the Russian violinist, accompanied by Mme. Petschnikoff, have arrived from Europe. Petschnikoff comes fresh from Berlin triumphs with



ALEXANDER PETSCHNIKOFF

the Berlin Philharmonic Orchestra for a tour under the management of Henry Wolfsohn. He last visited this country in 1898, when he played in more than one hundred concerts. Petschnikoff comes from Moscow and is the son of a serf. He is a protégé of the Princess Oursoroff, of the Russian nobility, and through her was given the opportunities which have made him famous. His tour opened in Pittsburg on November 9, when he played with the Pittsburg Orchestra.

On November 15 he made his reappearance in New York with the Russian Symphony Orchestra in Carnegie Hall, playing the Tschaikowski Concerto.

A feature of Petschnikoff's tour will be a series of recitals for two violins, in which he will be assisted by Mme. Petschnikoff. They will give a recital in Mendelssohn Hall in December. Petschnikoff will also introduce while here several new concertos. He will play with the Boston Symphony, the New York Symphony, the Theodore Thomas Orchestra in Chicago, the Pittsburg, St. Louis, Cincinnati, and four times with the Philadelphia Orchestra. Petschnikoff will remain until April.

MADAME SCHUMANN-HEINK

When the announcement was made some months ago by Henry Wolfsohn that Madame Schumann-Heink had decided to return to the concert and operatic stage, the scenes of her great triumphs, it was hailed with genuine delight by her great number of friends throughout the country. With her decision to reenter the field where for so many years she had been a commanding figure, Madame Schumann-Heink left immediately for Europe, where numerous concert engagements had been arranged for her and also to sing in Bayreuth and Munich in the great Wagner Festivals. Her triumphs abroad this past summer are now matters of musical history, especially in Bayreuth, where the interpretation of her favorite rôles predominated the performances. She also sang in Paris in two concerts with the Colonne Orchestra, also in the Maine State Festivals. Her tour in America embraces one hundred concerts in addition to twenty-five appearances which she will make with the Metropolitan Opera Company.

Pianist Felix Fox of Boston gave the first of a series of chamber recitals in that city November 20th, assisted by the Hoffmann Quartet. The program included the Brahms' piano quintet, d'Indy's piano quartet, Op. 7, and these piano numbers: First movement from second sonata by Glazounoff, Fauré's fourth impromptu and romance, and Saint-Saëns' toccata.

INSTRUCTION BOOKS

The following works have made a place for themselves. Their success entitles them to further urging on the part of the publishers, in order to bring them to the attention of those who may not know them.

The Very First Lessons at the Piano

By MRS. CROSBY ADAMS . . . Price, 75 cents

The title gives the stage of work for which the book is intended. Unquestionably the interest which the contents of the book constantly awakens in the child is the secret of the great success the book has enjoyed. If you are doing work with children and are unacquainted with this book you are certainly missing one of the best things for beginners in piano playing.

Piano Technic for Children

By JULIA LOIS CARUTHERS . . Price, $2.00

This work deals solely with the technic of piano playing, and presents the subject in a manner at once novel and unusually attractive. The seriousness of the system is none the less marked because of the "play" features on which the work is based, in fact, seriousness is its vital claim, and the attractiveness of presentation dispels the drudgery. It is a splendid book to use for young children.

Hand-book of 101 Exercises for the Voice

Compiled by J. H. GARNER . . . . . Price, $1.00

Teachers of singing will recognize in this collection many familiar and favorite exercises. They are chosen from the great and well-known masters. The revised edition contains additional exercises, making a larger total than the title calls for. A number of pages of blank music paper are bound into the book, thereby giving each teacher the opportunity to add exercises of his own. A useful, practical book.

The Elements of English Verse, correlated to Music

By ALICE C. D. RILEY . . . . Price, $1.50

This is a new work entirely unique in its contents, and provides most excellent instruction on a topic which is certain to engross the attention of educators. It is receiving most enthusiastic recommendation from those who have examined it. Teachers of music in the schoolroom, and children in general, know what Mrs. Riley's work stands for. She has much to tell them in this new book.

To the organist in search of an appointment no requirement as to qualifications should be prohibitive after the glorious example of the Australian candidate who wrote: "Gentlemen, I notice your advertisement for a music teacher and organist — either lady or gentleman. Having been both for several years I offer you my service." —*London Telegraph.*

* *

"I saw you at the concert last night," said Mrs. Oldcastle.

"Yes," replied her hostess; "me and Josiah are both so fond of music, you know."

"What do you think of Sawmore's technique?"

"Well, to tell the truth, I didn't notice it; but I thought his fiddlin' was just grand."—*Chicago Record-Herald.*

* *

GUILTY

"My daughter tried a new song yesterday."

"And found it guilty?"

"Guilty? What do you mean?"

"I supposed she found it guilty; I heard her punishing it." —*Exchange.*

* *

THE WAY IT SOUNDS

Mrs. Ascum.—"Does that Miss Drumm next door own her piano or does she rent it?"

Mrs. Knox.—"Usually she rends it."—*Exchange.*

* *

The "burden of a song" does not properly mean its sentiment or intent. "Bourdon" is the drone of a bag-pipe; hence a running accompaniment or repetition of musical sounds or words came to be called its "bourdon," and then, by an easy transition, its "burden."—*New York Sun.*

* *

A little girl in Cleveland was playing with her trinkets on the parlor floor while an older sister was drumming with much persistency on the piano.

"Play louder, Eloria," spoke up the child.

The girl at the keys felt flattered, and, with an elated smile, asked: "So you like to hear me play, do you, darling?"

"No, I don't," came the unexpected and emphatic reply. "I wanted you to play louder so papa would tell you to stop."—*Exchange.*

* *

AND THE CONTRACT ISN'T ALWAYS BINDING

The booking of a singer's tour doesn't always depend on the volume of his voice.—*Philadelphia Bulletin.*

* *

TIME TO DRAW THE LINE

Tenor (singing). — "Oh, 'appy, 'appy, 'appy be thy dreams."

Professor. — "Stop! Stop! Why don't you sound the 'h'?"

Tenor. — "It don't go no higher than 'g'"—*Modern Society.*

* *

"I notice you've got new paper in your hall," said Mrs. Nexdore.

"Yes," replied Mrs. Pepprey. "How do you like the style of it?"

"It seems to me it's rather loud."

"Yes, that's why we selected it. We thought it might drown the sound of your daughter's piano playing." —*Philadelphia Press.*

* *

CAN'T HIDE GENIUS

"It is pretty hard to hide your light under a bushel in New York," said a well-known musician to-day. "Not long ago I dropped into a newly opened French restaurant, just off Long Acre Square, and there I heard one of the finest violinists in the city.

"Naturally, I visited the place often, and just as naturally I mentioned my find to numerous friends. And as the cooking was better than the average, the violinist drew quite a number of musical people to the place.

"To-day, however, when I dropped in for lunch, I discovered that my violinist was gone. Where he went I don't know, but I'm certain I'll find him again in some first-class musical organization, making a name for himself."

* *

"I can't understand why Mildred has so many admirers. She neither plays nor sings."

"That's the answer." —*Chicago News.*

* *

DEFECTIVE

Poet. — "Why did you return my patriotic song?"

Publisher. — "Didn't like it at all."

Poet. — "What was the trouble?"

Publisher.—"You didn't rhyme soldier boy and mother's joy in it anywhere.—*Exchange.*

Supplementary Examinations (Founded by Mrs. Jeannette M. Thurber.)

NATIONAL CONSERVATORY OF MUSIC OF AMERICA

47-49 West 25th St. New York. WASSILI SAFONOFF, Director.

The President and founder of the National Conservatory (which was chartered in 1891 by special act of Congress), Mrs. Jeannette M. Thurber, has been so fortunate as to secure a worthy successor of the eminent composer, Dr. Dvorak, in its directorship—WASSILI SAFONOFF, for more than a decade Director of the Moscow Conservatory and recently engaged as the sole conductor of the New York Philharmonic Orchestra. **Mr. Safonoff** will teach at the **National Conservatory** advanced **classes** in the **interpretation** of **pianoforte compositions.** He will **conduct** the **Conservatory Orchestra** (a feeder of the leading American orchestras), and he will also teach the **Art of Conducting.** Besides **Mr. Safonoff** the artistic faculty includes **Adele Margulies, Leopold Lichtenberg, Eugene Dufriche, Leo Schulz, Henry T. Finck, Max Spicker, Chas. Heinroth,** and nearly fifty other well-known teachers of singing and playing in New York. Instruction is given in all branches of the art: **Opera, oratorio, concert, voice, organ, piano, violin,** and **all orchestral instruments;** also **theory, harmony, composition,** and **history of music.**

SUPPLEMENTARY ENTRANCE EXAMINATIONS

Singing, Piano, Organ, and Orchestral Instruments—November 19th (Monday), from 10 A. M. to 12 M., 2 to 4 P. M.
Orchestra (Free), November 19th, 2 to 4 P. M.
WASSILI SAFONOFF, Conductor. Address Secretary.

1347 L Street, N. W., WASHINGTON, D.C.

FLETCHER MUSIC METHOD
SIMPLEX AND KINDERGARTEN

THIS System places the study of music on a truly psychological and educational basis; hence the drudgery is eliminated, and the pupils develop naturally and artistically, learning to express themselves, not merely to be copyists.

The System has the indorsement at home and abroad of many of the best musicians and educators, such as Dr. Wm. Mason, Dr. William Cummings, London; Dr. Hugo Riemann, Leipsic; Dr. Gerritt Smith, Dr. Anagnos, Franklin Taylor, John Orth, Dr. Lyman Abbott, Thomas Tapper.

Send for circular and read the letters of indorsement from these and many more prominent musicians; also the letters from teachers who have given the method a practical trial of from two to seven years. Address,

Mrs. Fletcher-Copp, 107 Thorndike Street, Brookline, Mass.

New Ten-story Ditson Building

Future Home of C. H. Ditson & Co., in New York, will be at Nos. 8-10-12 East Thirty-fourth Street. Tearing Down Old Dwellings Preparatory to Erecting a Handsome Business Structure.

The William Waldorf Astor dwellings in East Thirty-fourth Street are being torn down rapidly to make way for the sky-scraper which C. H. Ditson & Co. propose to build. The building is of pleasing design, as will be seen by a photograph of it made from the architect's drawing, and shown on this page.

The site of the new Ditson building is at Nos. 8, 10, and 12 East Thirty-fourth Street. This is only a few doors away from Fifth Avenue, and is in the heart of the fashionable new shopping district. The Waldorf-Astoria Hotel is a few feet away, as are two of the largest dry goods stores in the city, Aeolian Hall, and other structures visited each day by hundreds of persons.

The building, which will have a front of Indiana limestone, will be 53 by 100 feet. It will be ten stories high, and fire-proof. C. H. Ditson & Co. will occupy four floors and the basement.

The basement will be devoted to the music book department. The main floor will be the retail department, confined principally to music publications, sheet music, etc. The retail and wholesale small goods department will be on the second floor and the third floor will be devoted to talking-machines and general offices. The piano department of the company will be greatly enlarged, and will occupy the fourth floor. At the present time the Briggs and Poole are represented. Other lines will probably be taken on.

The floors above will be lofts and for offices. The company will vacate their building at No. 867 Broadway, where they have been for years, in May, 1907, having subrented it already.

The announcement that the Ditson house will again move uptown had long been suspected by those familiar with the history of the house in New York, and who know the real estate situation. The Ditson business has grown with the town, and when the retail centers of the city were moved uptown the Ditson house went along with the popular business flow.

CHAS. H. DITSON & CO.'S NEW HOME

It will be erected on East Thirty-fourth Street, New York They will occupy Four of the Ten Floors.

The New York branch of the Ditson house was established in 1867 with Charles H. Ditson, eldest son of Oliver Ditson, at its head. He has continued in that capacity to the present time. The first New York store was in Broadway at Prince Street. The next change was to No. 711 Broadway, corner of Washington Place. Then the company bought out the J. L. Peters business and the Ditson store was moved to Broadway and Thirteenth Street. The next move was to Broadway and Eighteenth Street, where the company have been for twenty-five years.

The main Ditson house, the Oliver Ditson Company, is one of the oldest musical establishments in the country. The business was founded in Boston by the late Oliver Ditson, in conjunction with the late Col. Samuel H. Parker. The firm was then styled Parker & Ditson. They had a store in Washington Street, Boston, near School Street. It was then moved to a portion of what was, until lately, the famous Old Corner Bookstore.

In 1840 Mr. Ditson purchased the interest of Colonel Parker, the firm name being changed to Oliver Ditson. Mr. Ditson was then twenty-nine years old. The business showed a remarkable growth. John C. Haynes, the present head of the Ditson house, started with the concern when a boy of fifteen. He became a co-partner in 1857, and the firm was changed to Oliver Ditson & Co. In 1857 Oliver Ditson & Co. moved to a commodious building at No. 451 Washington Street, owned by Mr. Ditson. In 1903 a superb building was built at No. 150 Tremont Street, and is now the Ditson home.

Oliver Ditson died in 1888 at the age of seventy-seven. For more than half a century his name was a household word throughout the country. The Oliver Ditson Company was formed in 1890. The present officers are John C. Haynes, president, Charles H. Ditson, treasurer, and Edward S. Cragin and Charles F. Smith, directors.

MUSICAL GIFT BOOKS

These books comprise the best of our extensive catalog, and are especially appropriate as gifts. The price against each includes postage to any address

THE STORY OF

MUSIC AND MUSICIANS

BY
LUCY C. LILLIE

THE OBJECT OF THIS BOOK is to interest young Music Students in the technique of their art, and in the associations amid which great masters have worked. Simple rules of harmony are given and the origin of different musical forms, but the major part consists of anecdotes of the famous composers—Bach, Handel, Haydn, Beethoven, Mozart, Chopin, Schubert, and others, with stories of the composition of favorite classics.

PUBLISHERS NEW YORK

SCRIBNER'S RECENT BOOKS

The Post-Beethoven Symphonists

By FELIX WEINGARTNER. Translated from the second German edition by ARTHUR BLEES. With 12 portraits, 12mo, $1.75 net.

Critical discussions of the Symphonic works of Schubert, Mendelssohn, Schumann, Brahms, Tchaikowsky, Bruckner, Berlioz, Liszt, Richard Strauss, and others, by one of the leading musicians of the day.

The Art of the Singer — Practical Hints about Vocal Technics and Style

By W. J. HENDERSON. Author of "What Is Good Music," "The Orchestra and Orchestral Music," etc. 12mo, $1.25 net. Postage, 11c.

Practical hints about the technics of vocal art and some suggestions as to style. The author aims to present the best that was taught by the old masters, together with the practice and precepts of the leading singers of our own time. The ultimate aim of the writer has been to show that the fundamental principles of singing, as discovered by the masters of the seventeenth century and taught by the famous teachers of the eighteenth, are those upon which the real art of to-day rests. The high position which Mr. Henderson holds in the world of music gives special importance to the book.

A Few Features for 1907

The Musician for the year 1906 is the best existing example of a periodical publication devoted to music. Nevertheless, we have by no means reached the ideal at which we are aiming. For the year 1907 *The Musician* will be better still.

The Voice, a series of practical lessons to begin in January, 1907, by one of the greatest teachers,	*William Shakespeare* London
The Natural Laws of Piano Technic, a profusely illustrated series of practical lessons by	*Mary Wood Chase* Chicago
Letters to Music Teachers, dealing with the essential fundamental principles of piano education,	*W. S. B. Mathews* Chicago
A series of articles on Music in France, the Chanson, and many other interesting phases by the Librarian of the Paris Conservatory,	*Julien Tiersot* Paris Conservatory
Music in Europe, a comprehensive monthly letter, which keeps the reader *au courant* with the leading music activities of Europe,	*Orton Bradley* London
Music Theory, a varied series of articles by eminent specialists under the general editorship of	*Dr. Percy Goetschius* New York
Community Music, what music is doing in American towns and cities as a distinct social factor,	*Thomas Tapper* New York
A Repertoire of Songs with practical lessons,	*Karlton Hackett* Chicago
The best Piano Music; lists of the best teaching pieces in the various grades,	*Thomas Tapper* New York
Lessons in German / Lessons in French — This series is especially devoted to the vocabulary of music.	*F. C. Burkart and A. Rheingauer* Boston
The Music Portraits of the Crosby-Brown collection (Metropolitan Art Museum),	*Frank H. Marling* New York
Lessons in American Musical History, being interesting chapters in various phases of American music,	*Henry E. Krehbiel* New York
A series of Letters, of Robert Franz (hitherto unpublished),	*Carl Armbruster* London
A series of articles on the Art of Piano Pedagogics,	*F. H. Morton* Auckland, N. Z.
Modern Piano Composers and their Works,	*E. B. Hill* Boston

Each issue will contain at least 24 and many issues 32 pages of standard and recent vocal and instrumental music.

A Beethoven Number

The January number will present, besides the varied contents from regular contributors, a number of illustrated articles on Beethoven. Among the special contributors to this issue are Mr. H. E. Krehbiel of New York, Mr. Philip Goepp of Philadelphia, Mr. W. S. B. Mathews of Chicago, Mr. Frank H. Marling of New York.

A Grand Opera Number

The February issue of *The Musician* will be a Grand Opera number with many illustrations and articles on the more recent works in this form.

Choir and Choral Music

Beginning with the January issue of *The Musician*, the Organ Department will be enlarged and will be devoted to the Organ, the Choir, and all matters pertaining to Church Music. This Department will be in charge of Mr. H. C. MacDougall, Professor of Music at Wellesley College, Mass.

A Paris Letter

M. Isidor Philipp, at the head of the piano faculty of the Paris Conservatory, will contribute a monthly letter to *The Musician* on the more important music performances in Paris. This contribution of M. Philipp will be one of the most interesting features of *The Musician* for the year.

These are but a few of the leading features for the year. Every issue of *The Musician* will teem with articles of prime importance to the teacher, student, and music lover.

If there is any query you wish to direct to any one of its many departments, the editorial staff is at your disposal. Questions arising in study, and in teaching, may be referred to authorities of the first rank.

To be without *The Musician* is to miss one of the greatest helps in music life that can be procured.

To have *The Musician* is to be in touch with all that is of prime importance.

Price, 15 cents per copy.
Subscription price, $1.50 per year.

SPINNING SONG

From the German
By Elizabeth M. Traquair

CARL REINECKE

Allegretto

VOICE

PIANO

1. Spin, las-sie, spin! The thread goes out and
2. Sing, las-sie, sing; A mer-ry heart to
3. Learn, las-sie, learn; Your dai-ly bread to

in. Grow-ing like your yel-low hair, Sense will grow from
bring! As your spin-ning you be-gin Keep a cheer-ful
earn! Learn to work and learn to pray, Spin-ning on from

year to year. Spin, las-sie, spin, Spin, las-sie, spin.
heart with-in. Sing, las-sie, sing, Sing, las-sie, sing.
day to day. Learn, las-sie, learn, Learn, las-sie, learn.

A CARRIAGE TO RIDE IN

From the German
By Elizabeth M. Traquair

CARL REINECKE

Allegretto *(Merry and lively, but not too fast)*

VOICE

PIANO

A car-riage to ride in, A horse for be-strid-ing, A pot full of hon-ey, A box for my mon-ey, A doll's house and kit-chen, What things we'll be rich in! A book, too, to read, What else can we need? Oh, a flute and a fid-dle, Hey did-dle did-dle, A bell, too, for ring-ing Kind Christmas is bring-ing.

LADYBIRD

ROBERT SCHUMANN
Op. 79, No. 14

Allegretto

VOICE

PIANO

1. Come La - dy - bird, and seat your-self Up - on my hand, up -
2. Go, La - dy - bird, fly home, fly home, 'Tis all on fire, Your
3. Fly, La - dy - bird, now fly a - way A - cross the hedge, a -

on my hand; Be sure I will not harm you, No, I'll not
chil - dren cry, So sore - ly, Oh, so sore - ly, cry, cry so
cross the hedge The neighbors will not harm you, No, they'll not

harm you! I will not harm you, pret - ty dear, Show your ti - ny wings and
sore - ly! The cun - ning spi - der spins them in, Go, La - dy-bird, fly
harm you! They will not harm you, pret - ty dear, Then show your ti - ny wings and

nev - er fear, Ti - ny wings so gay and pret - ty.
in, fly in, To your chil - dren cry - ing sore - ly.
nev - er fear, And greet them all so pret - ty.

GUARDIAN ANGELS

ROBERT SCHUMANN
Op. 79, No. 21

Semplice

VOICE

PIANO

1. When chil_dren lay them down to sleep, Two
2. But when they wake at dawn of day, The

an_gels come their watch to keep;
two bright an_gels go a_way;

Cov'ring them up safe_ly and warm,
Rest_ing them from their work of love,

Ten_der_ly shielding them safe from harm.
For God Him-self keeps watch a_bove.
